Image 001-launch-start-screen.png

What it shows: The start screen on a normal launch: three cards.
How to reach it: Open the file with the key unlocked (prototype panel > Launch the app as > Normal).

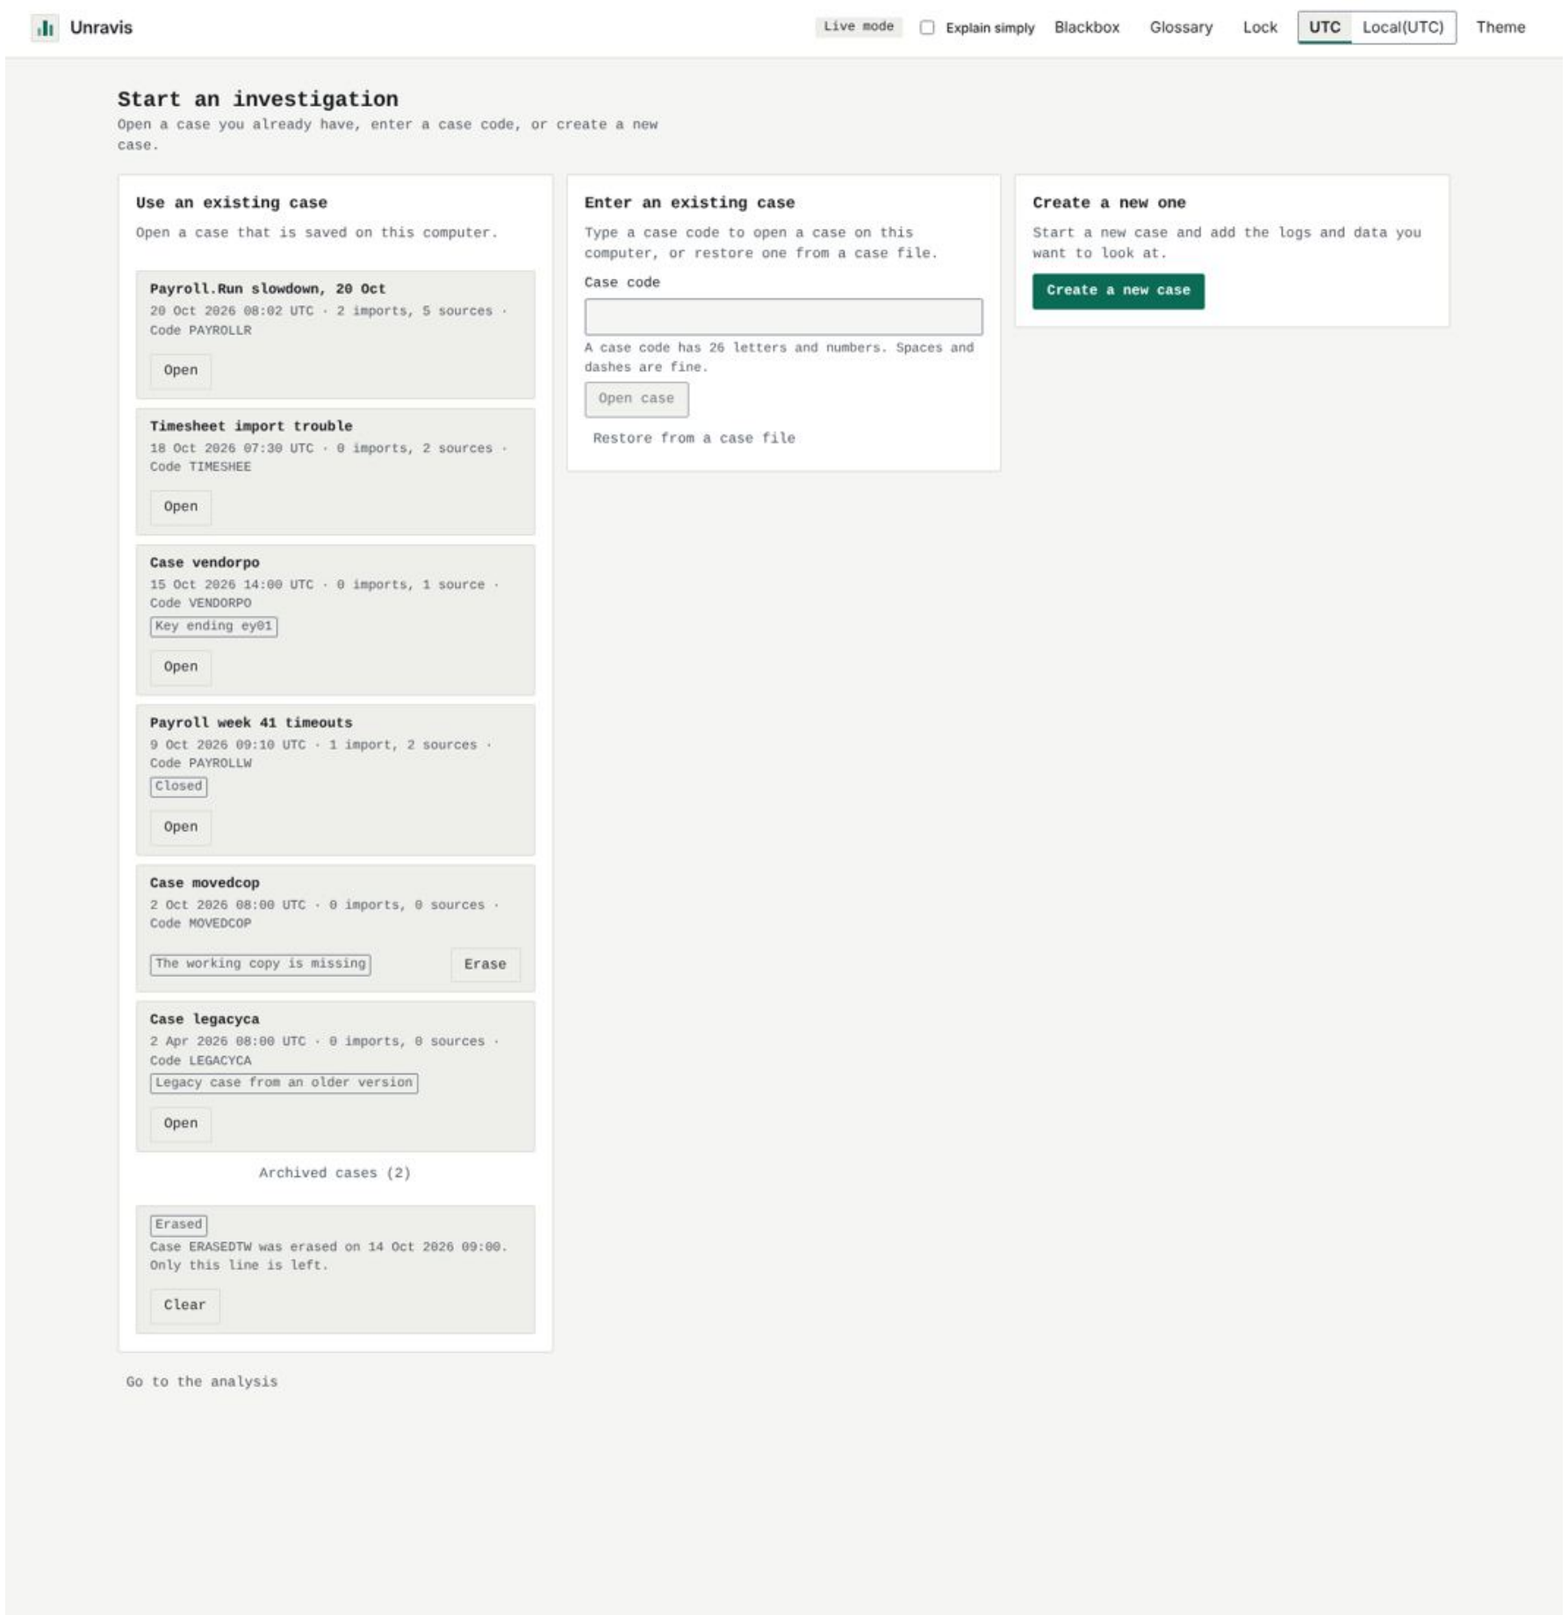

Image 002-key-locked-unlock-screen.png

What it shows: Master key locked: the unlock screen comes first, no case titles or counts.
How to reach it: Scenario s-locked (Launch conditions: Master key locked at launch).

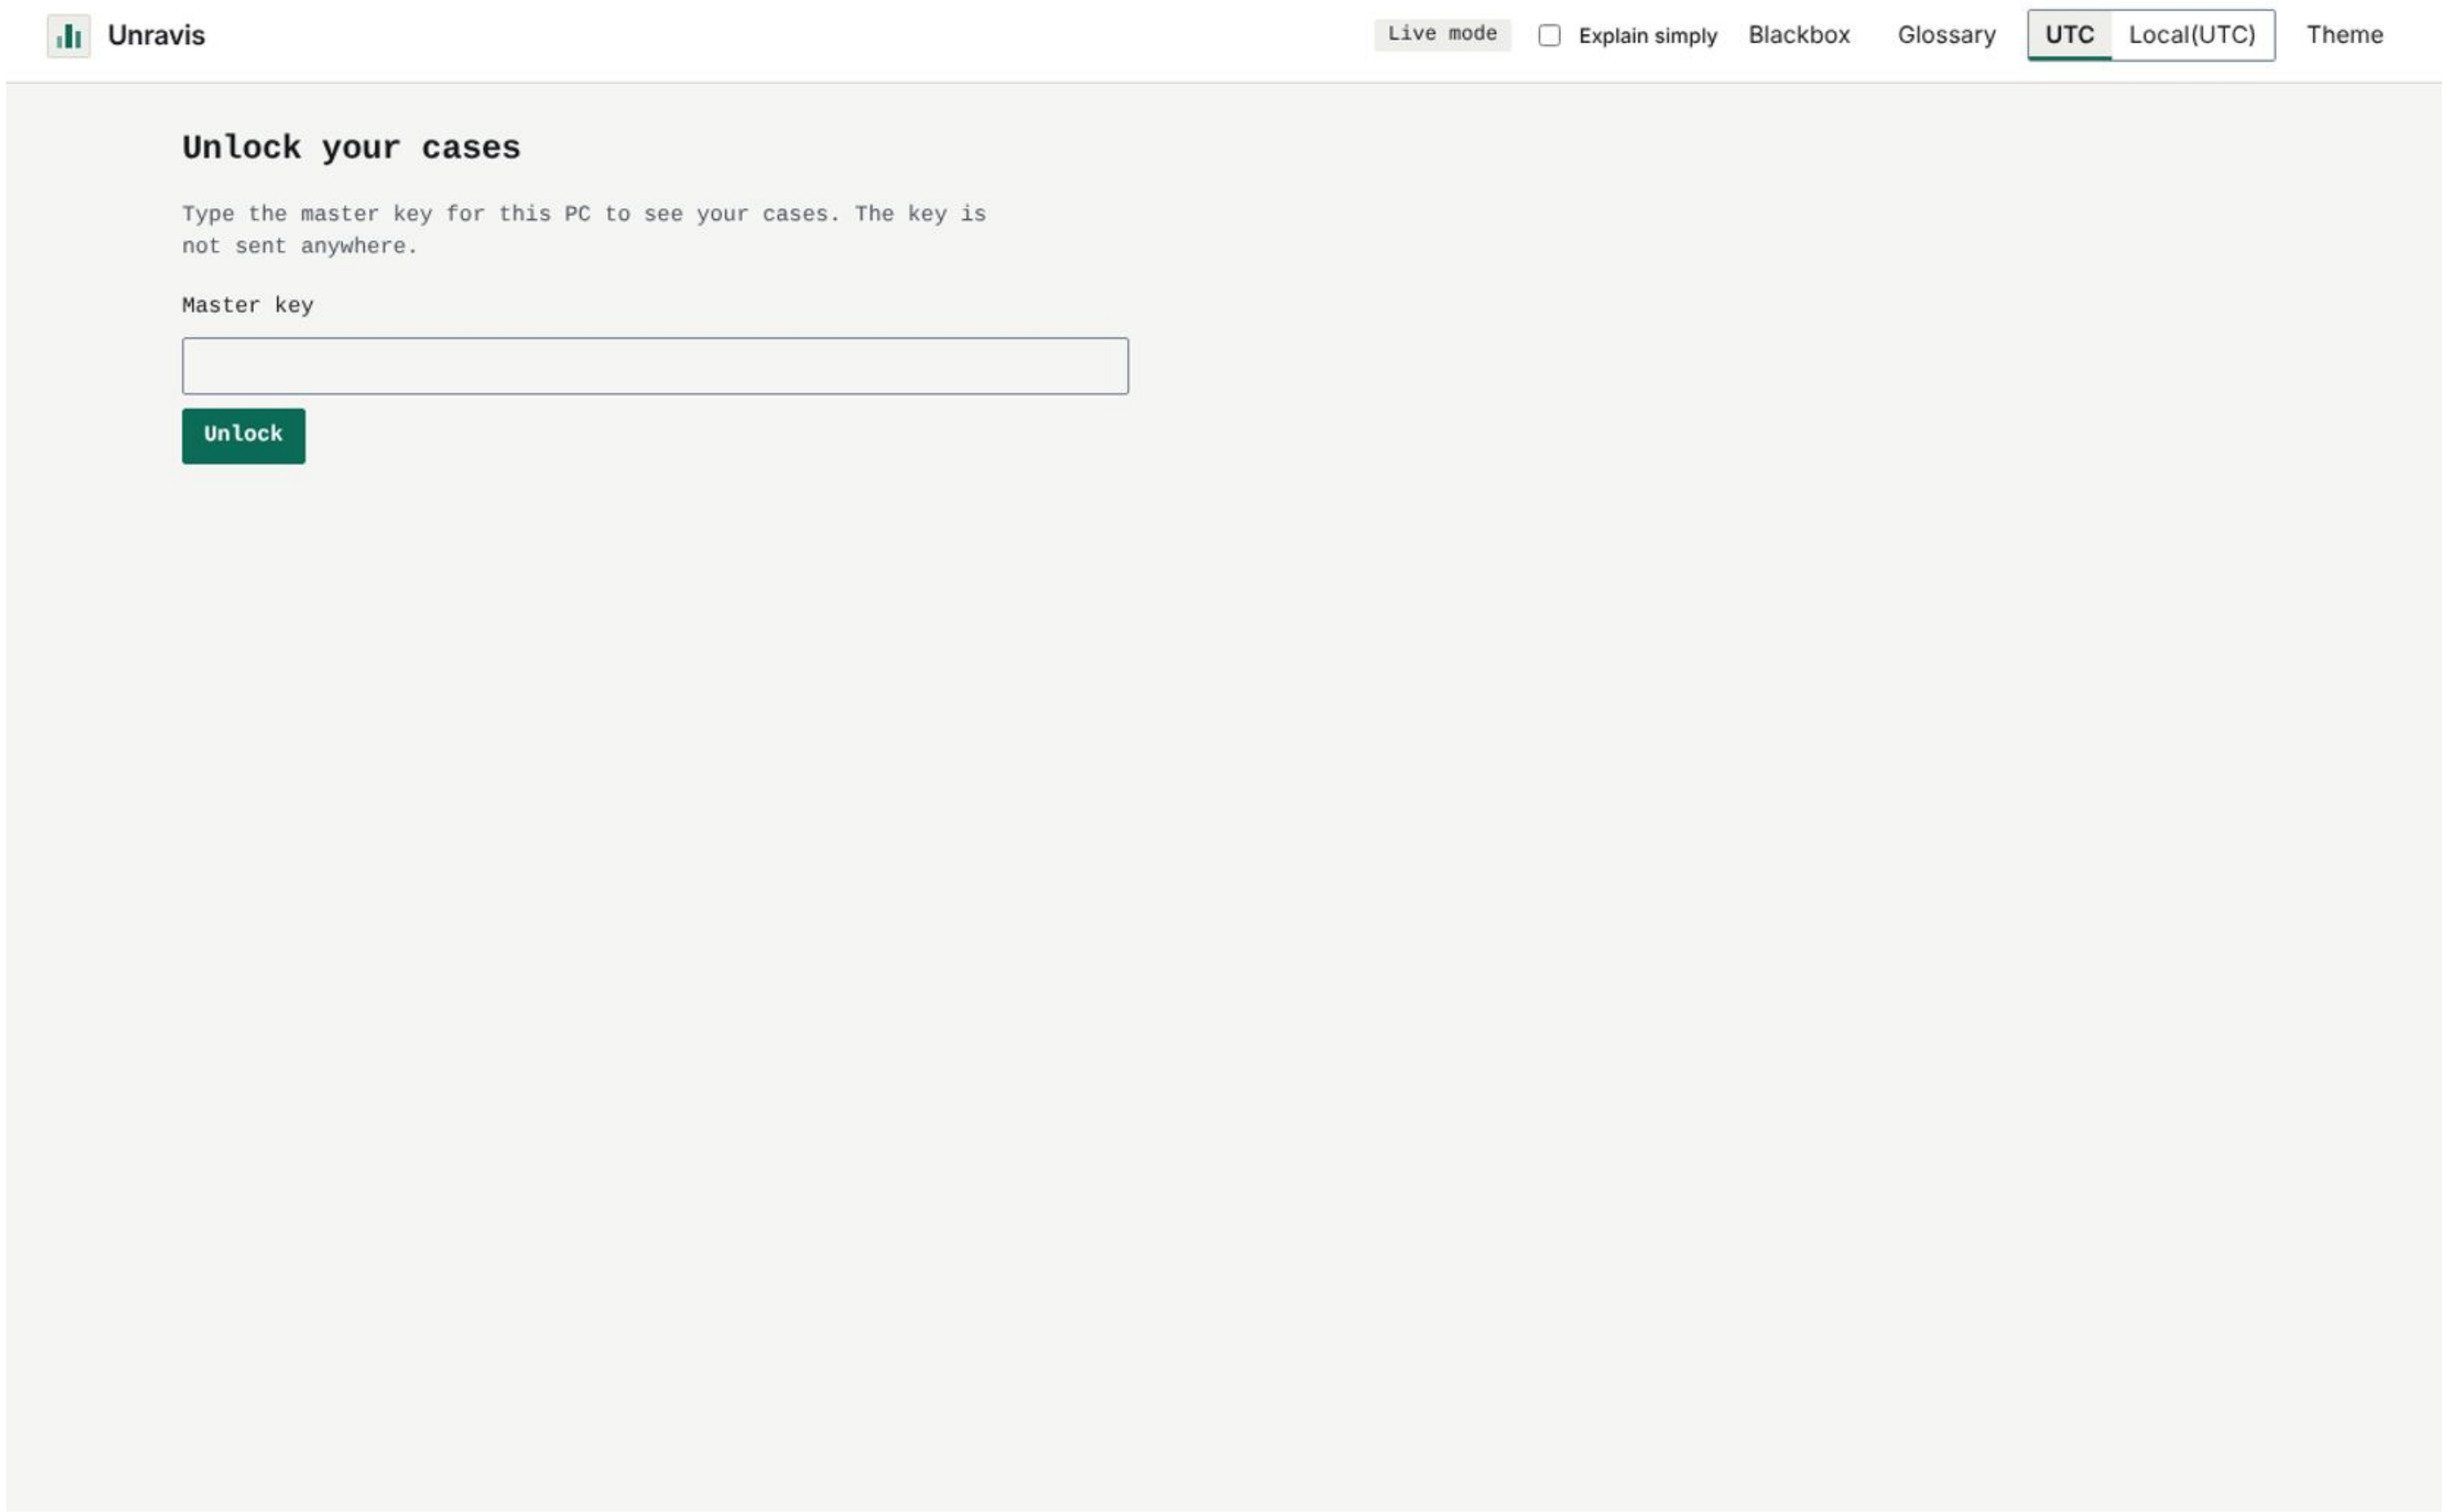

Image 003-key-wrong-first-try.png

What it shows: A wrong master key: one sentence, nothing revealed.
How to reach it: Unlock screen: type any wrong text, press Unlock.

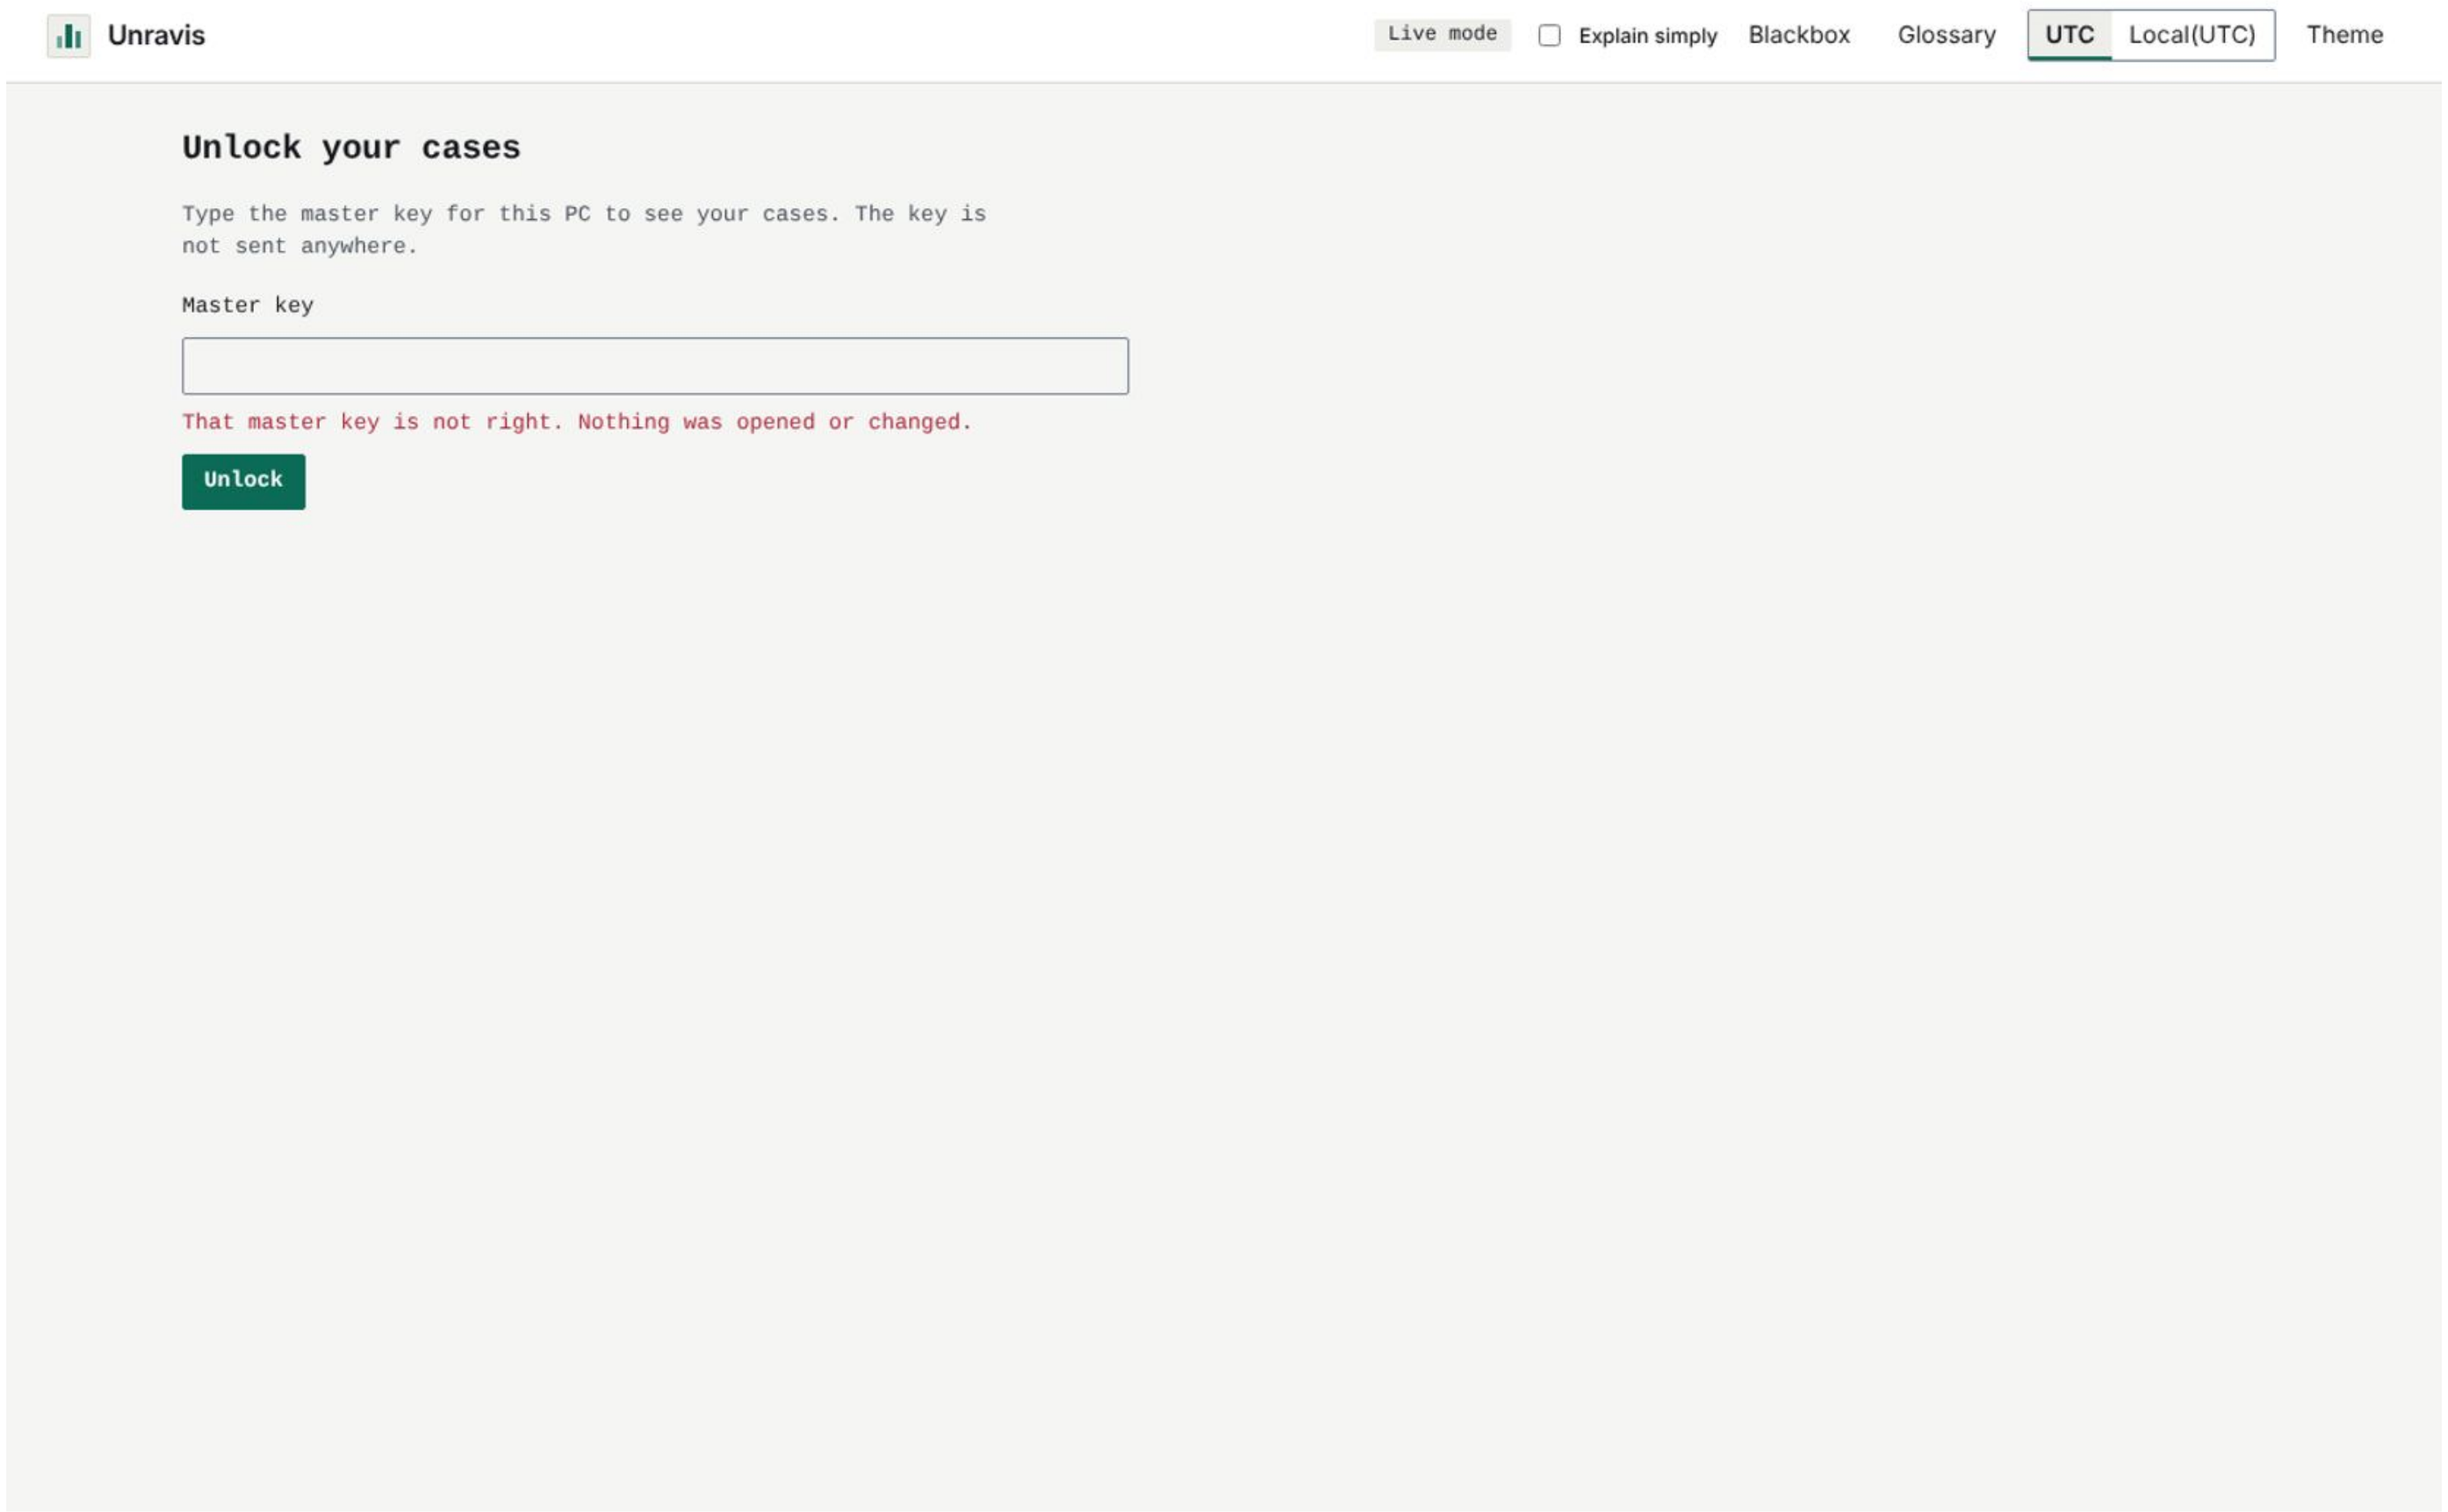

Image 004-key-wrong-throttled.png

What it shows: After 3 wrong tries the screen asks to wait a few seconds.
How to reach it: Press Unlock with a wrong key 3 times in a row.

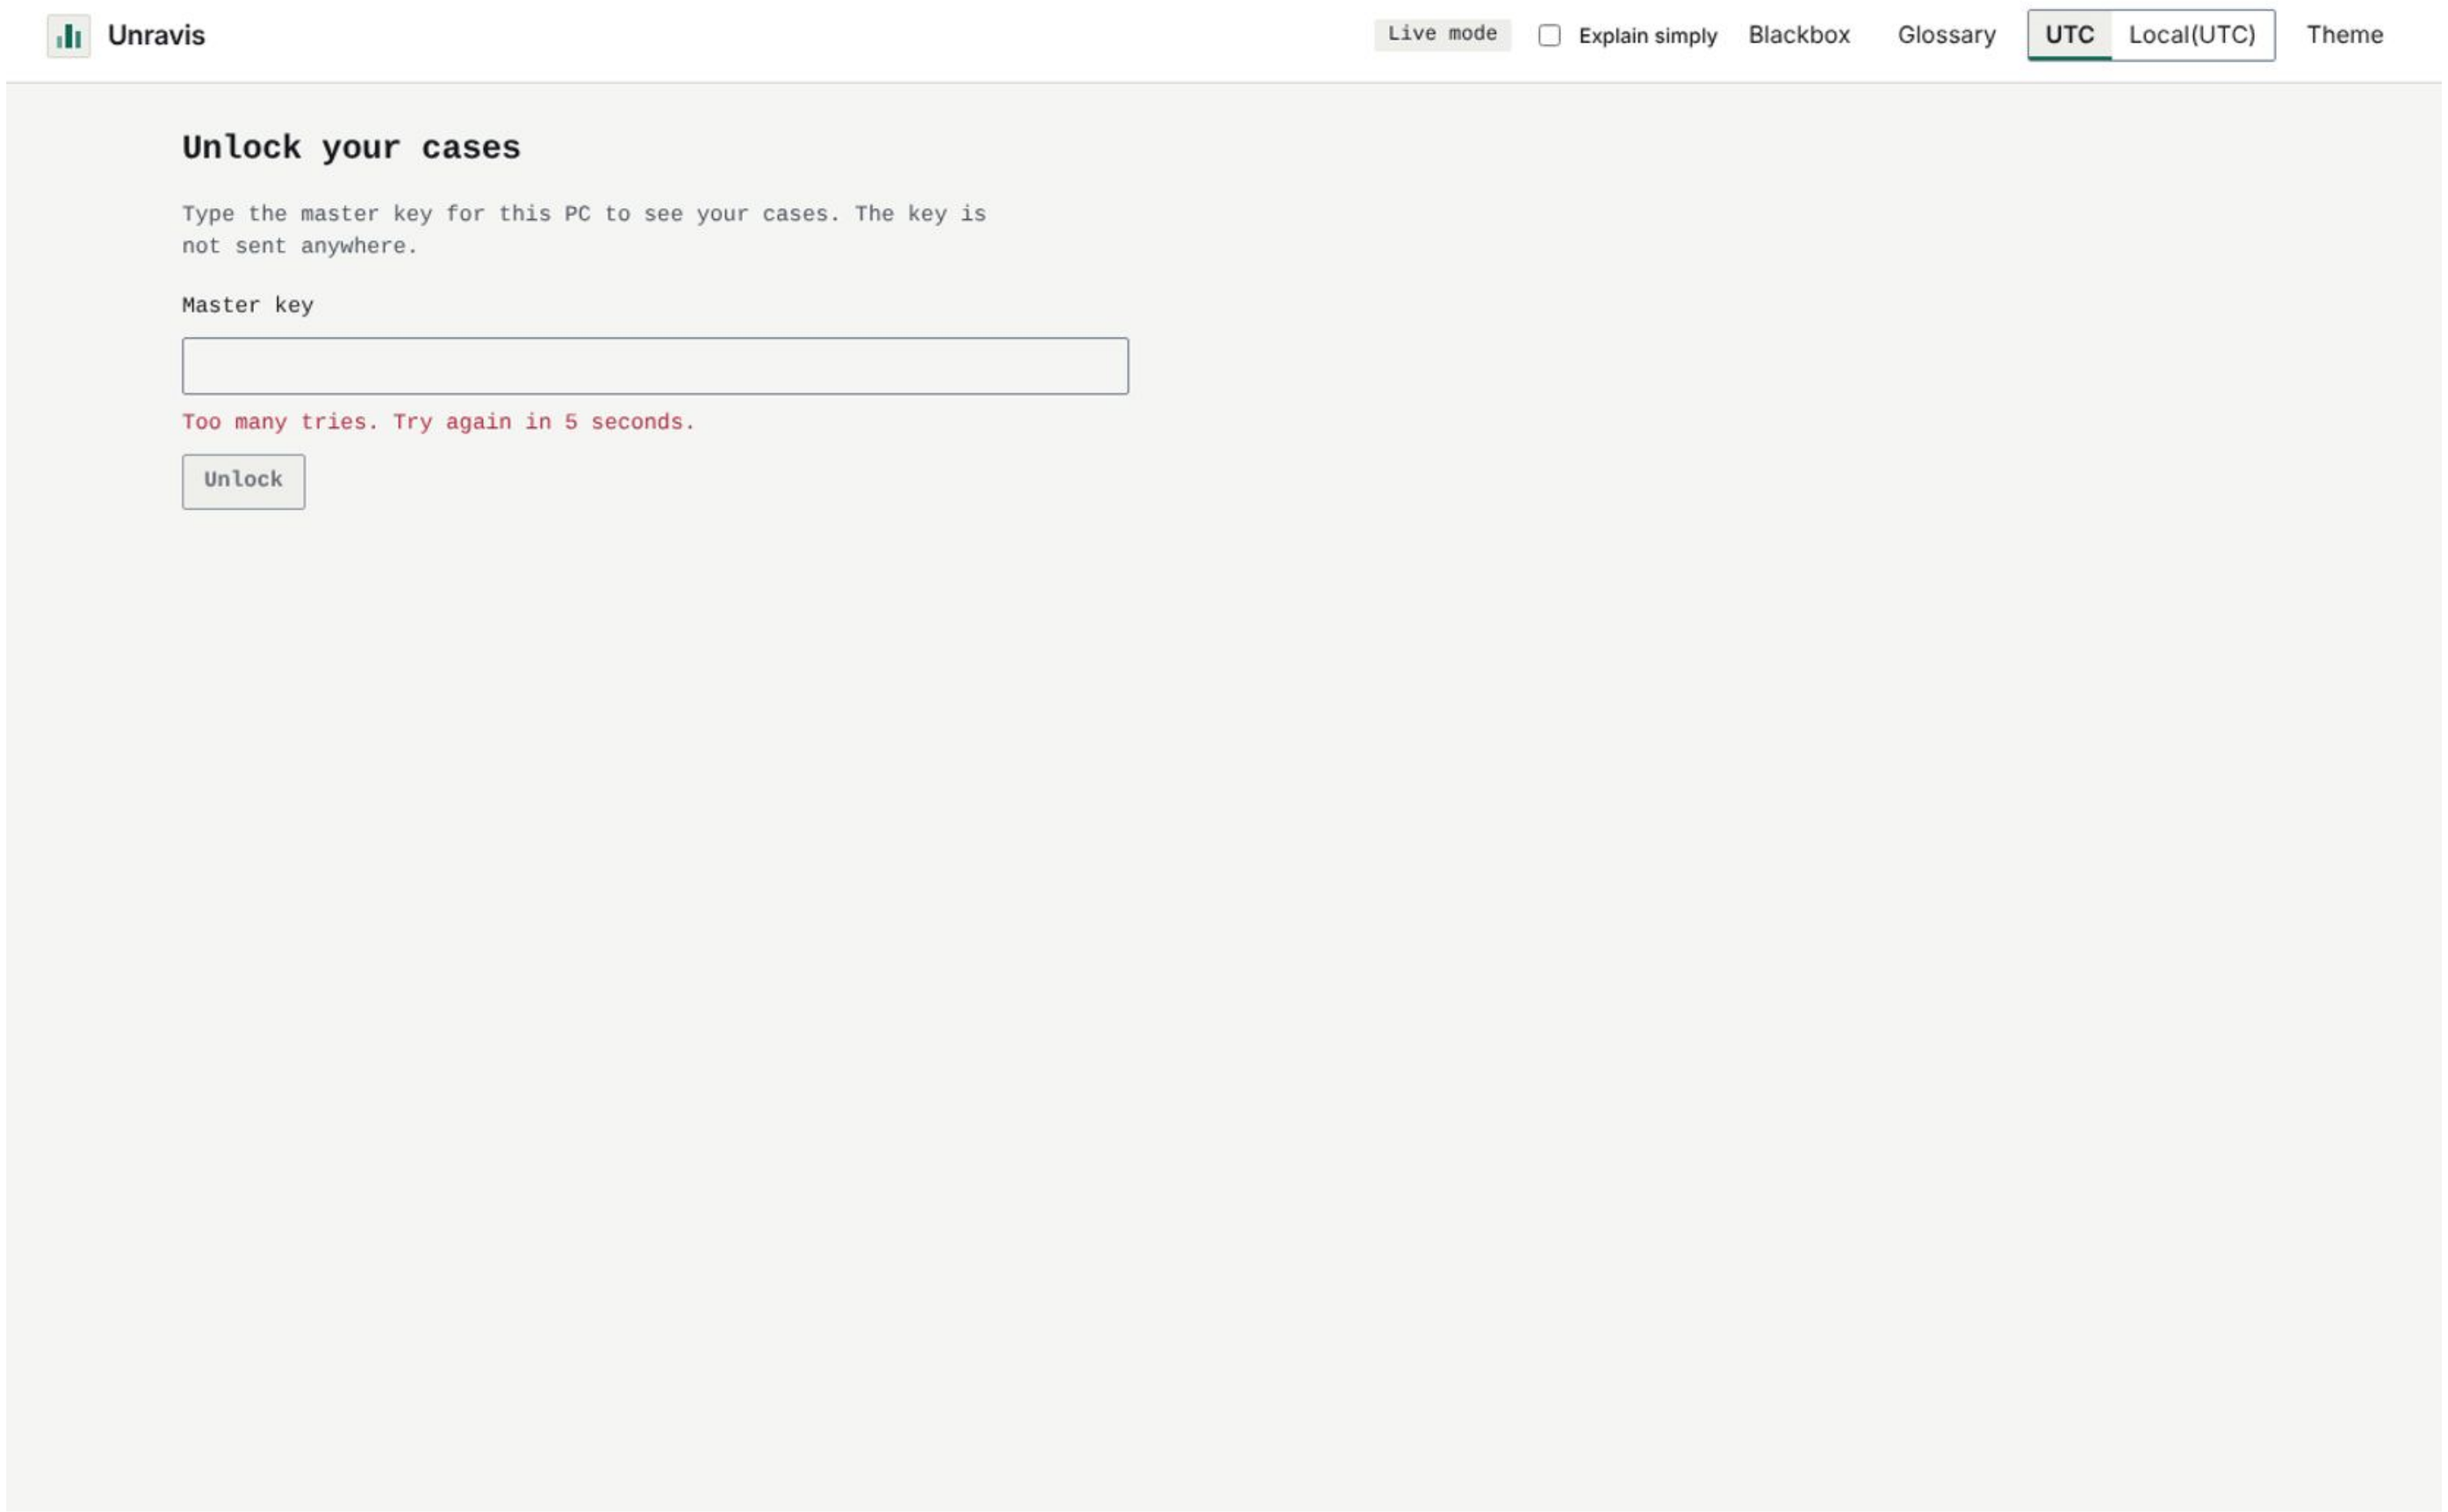

Image 005-key-right-after-wait.png

What it shows: Waited, typed the right key: back on the start screen.
How to reach it: Wait about 6 seconds, type orange-sunrise-2026 (test aid), press Unlock.

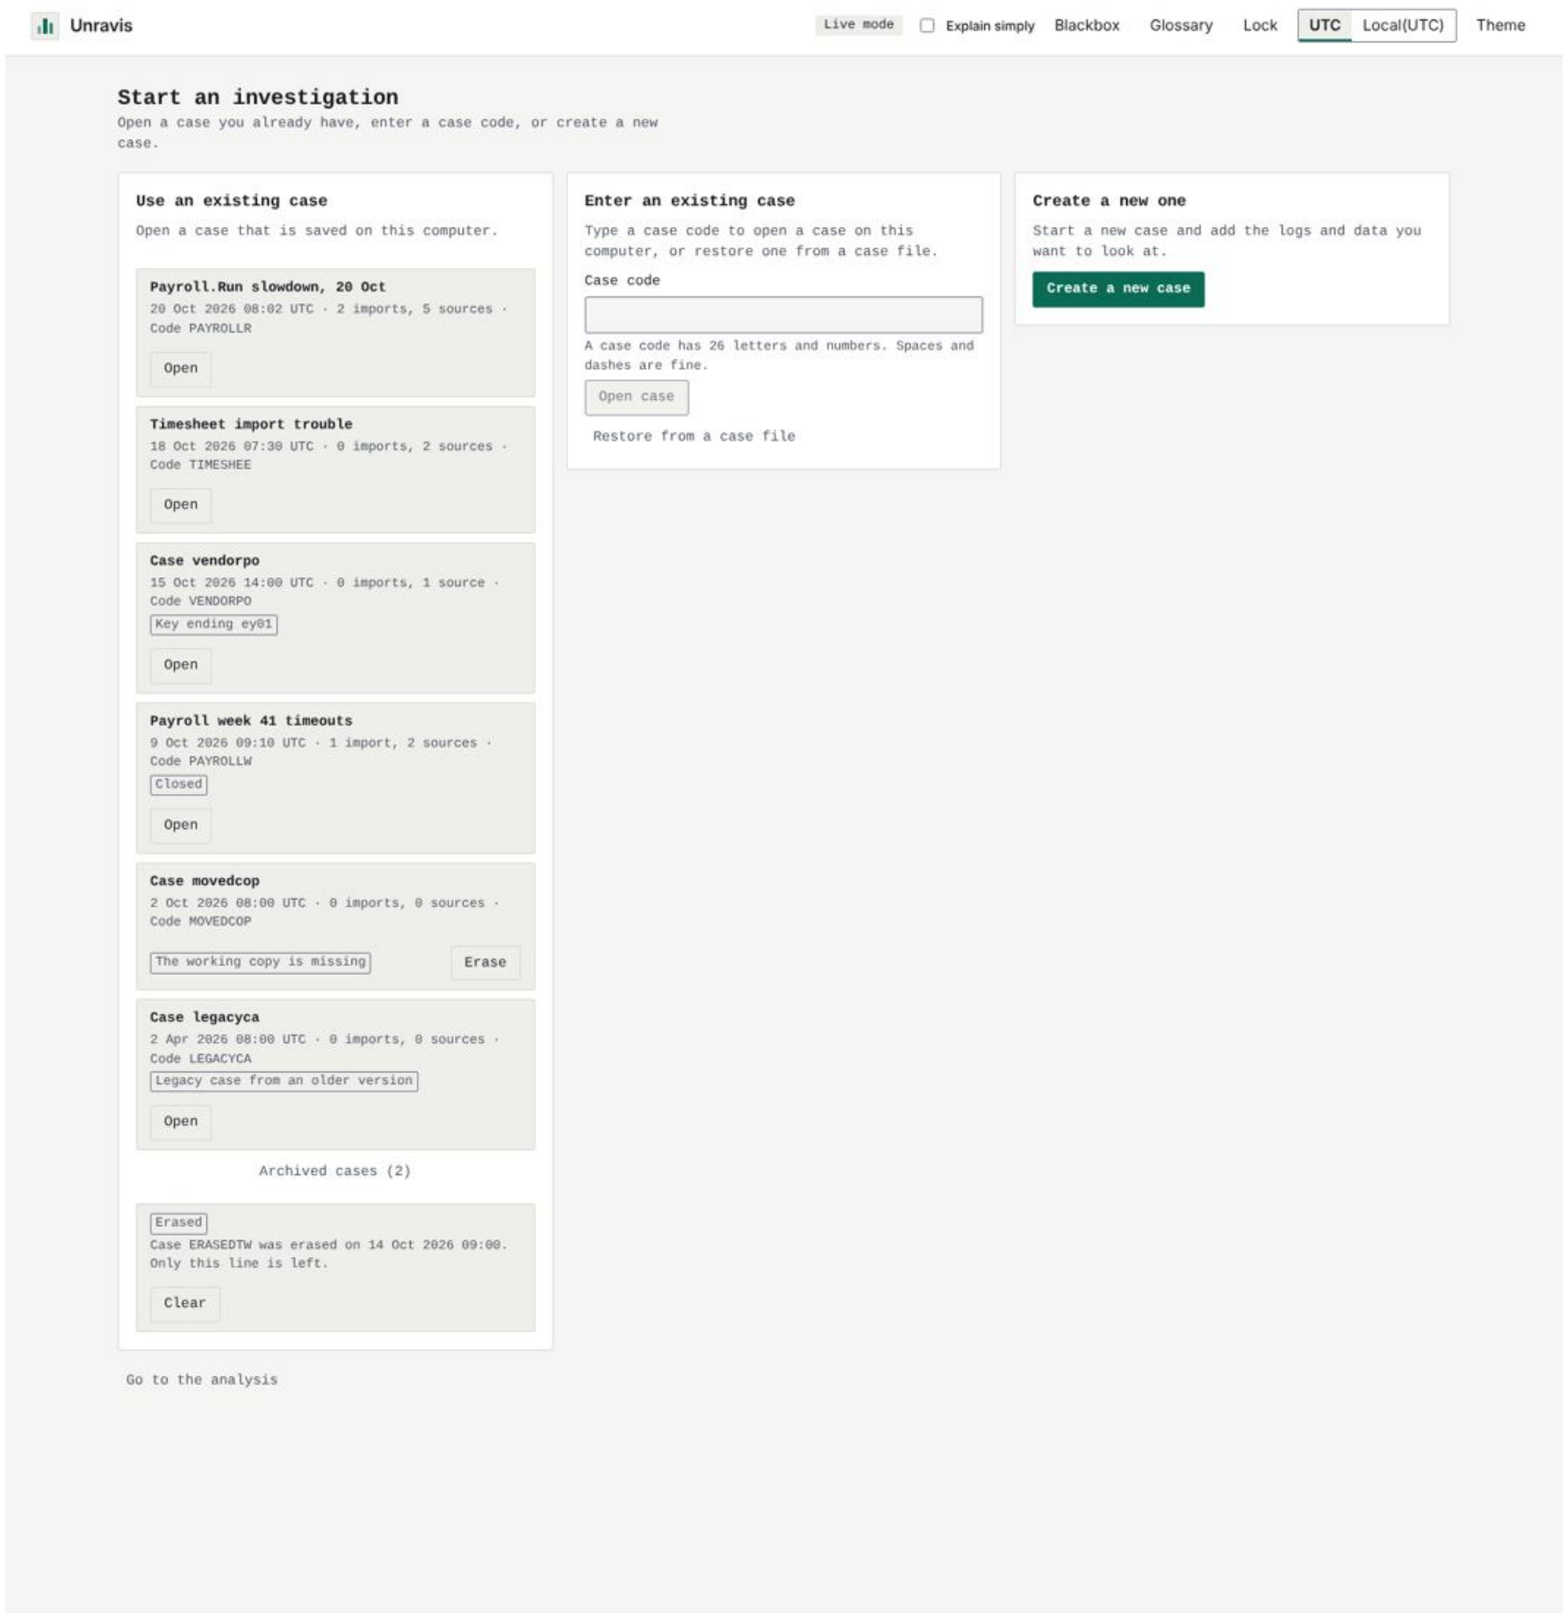

Image 006-key-file-damaged.png

What it shows: The master key file is damaged: the only way forward is to start over.
How to reach it: Scenario s-damaged (Launch conditions: Master key file damaged).

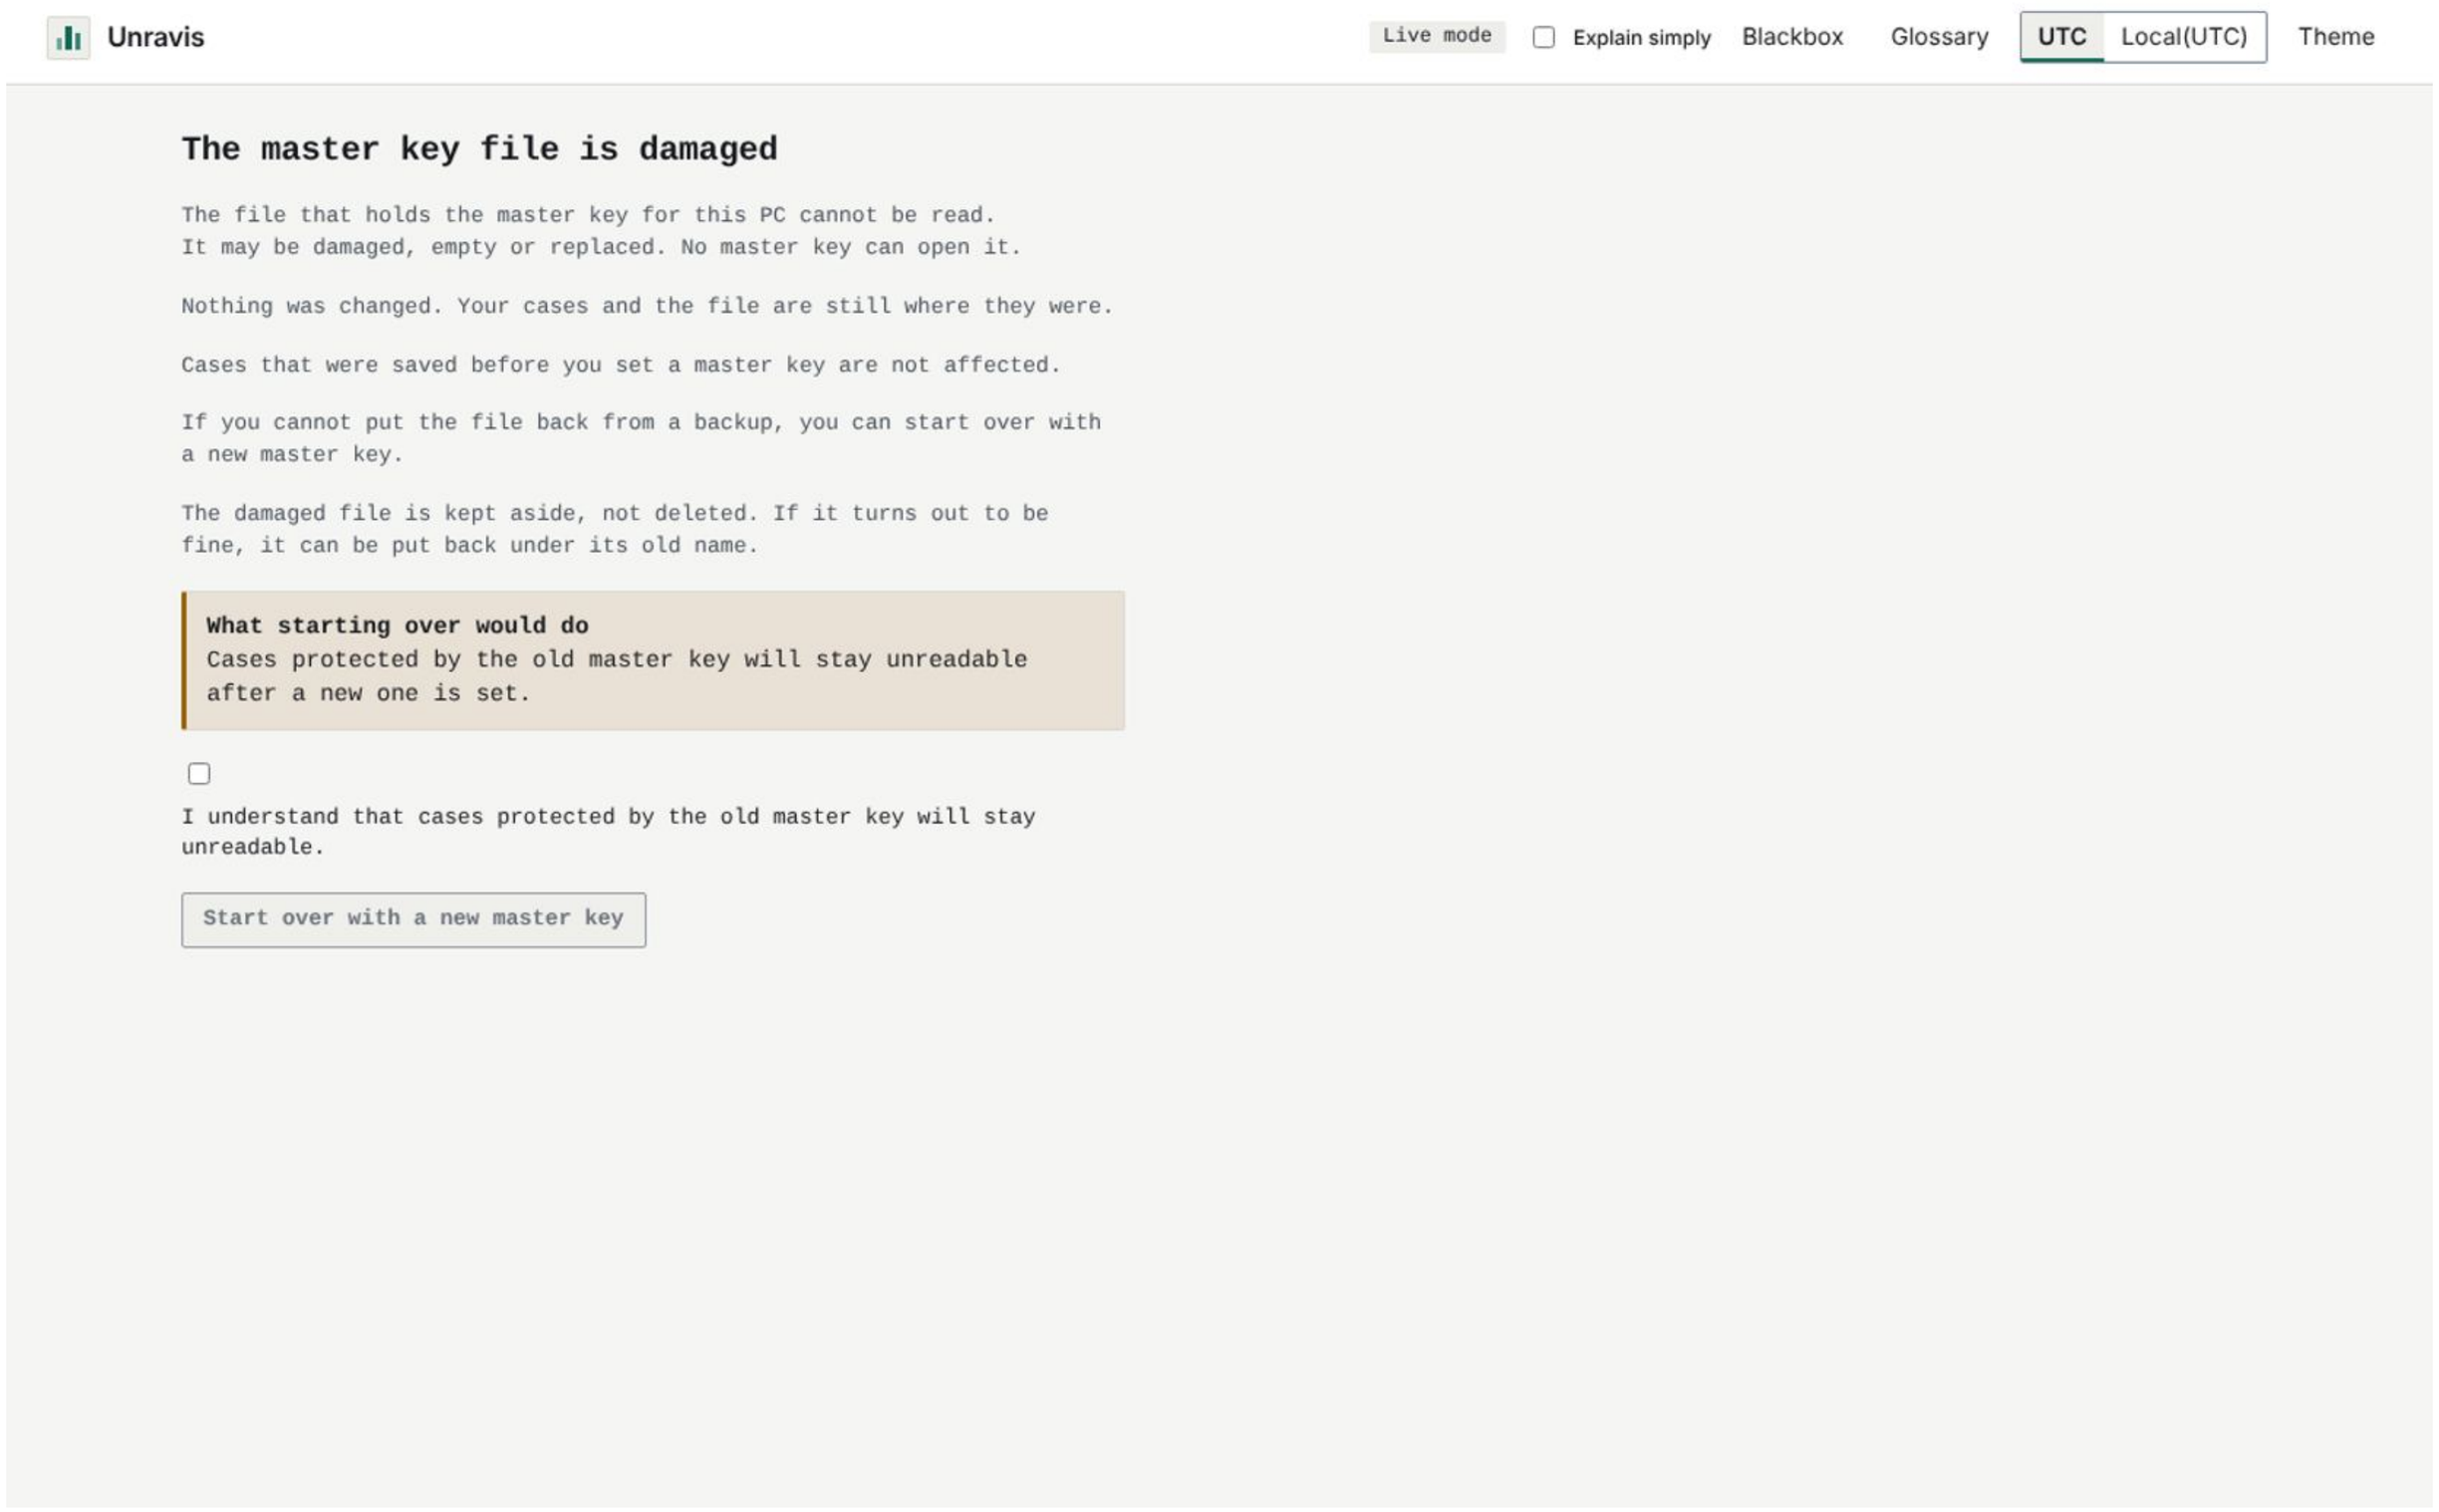

Image 007-key-file-damaged-ticked.png

What it shows: The start-over choice, with the acknowledgement box ticked.
How to reach it: Tick the box on the damaged-key screen.

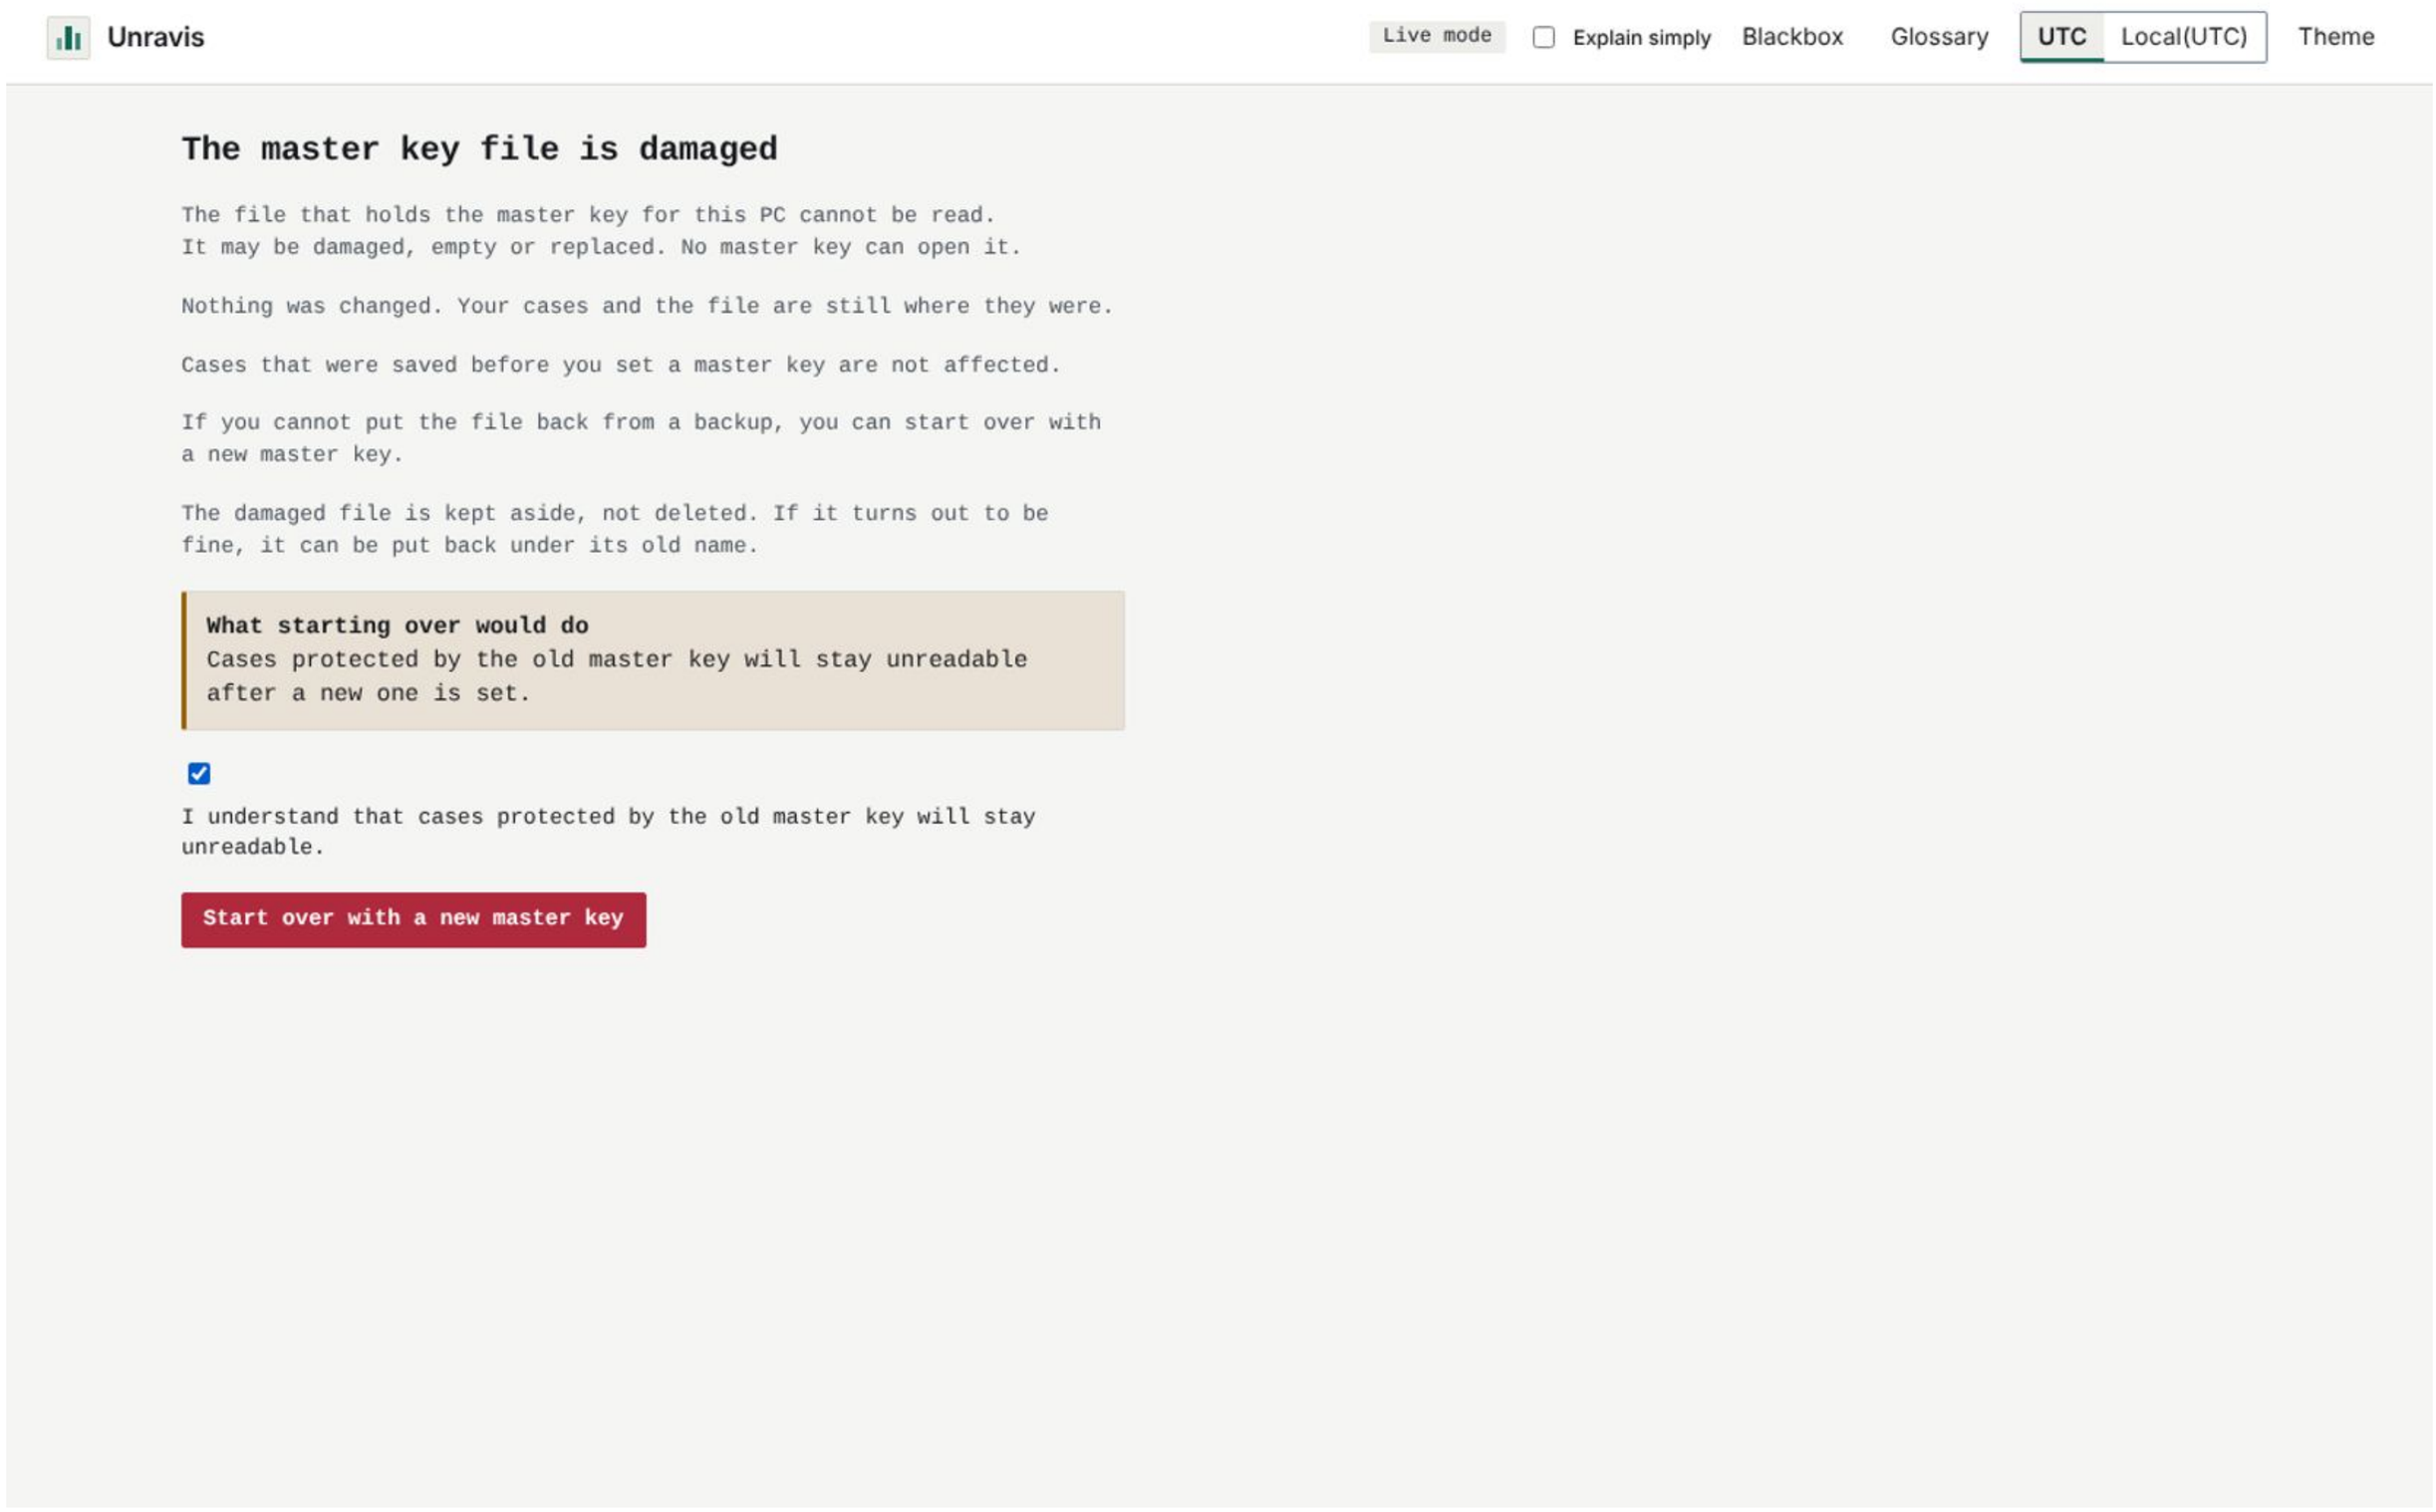

Image 008-key-file-set-aside.png

What it shows: After Start over: the old file is set aside (kept, not deleted) and the screen offers Set a new master key.
How to reach it: Press Start over with a new master key.

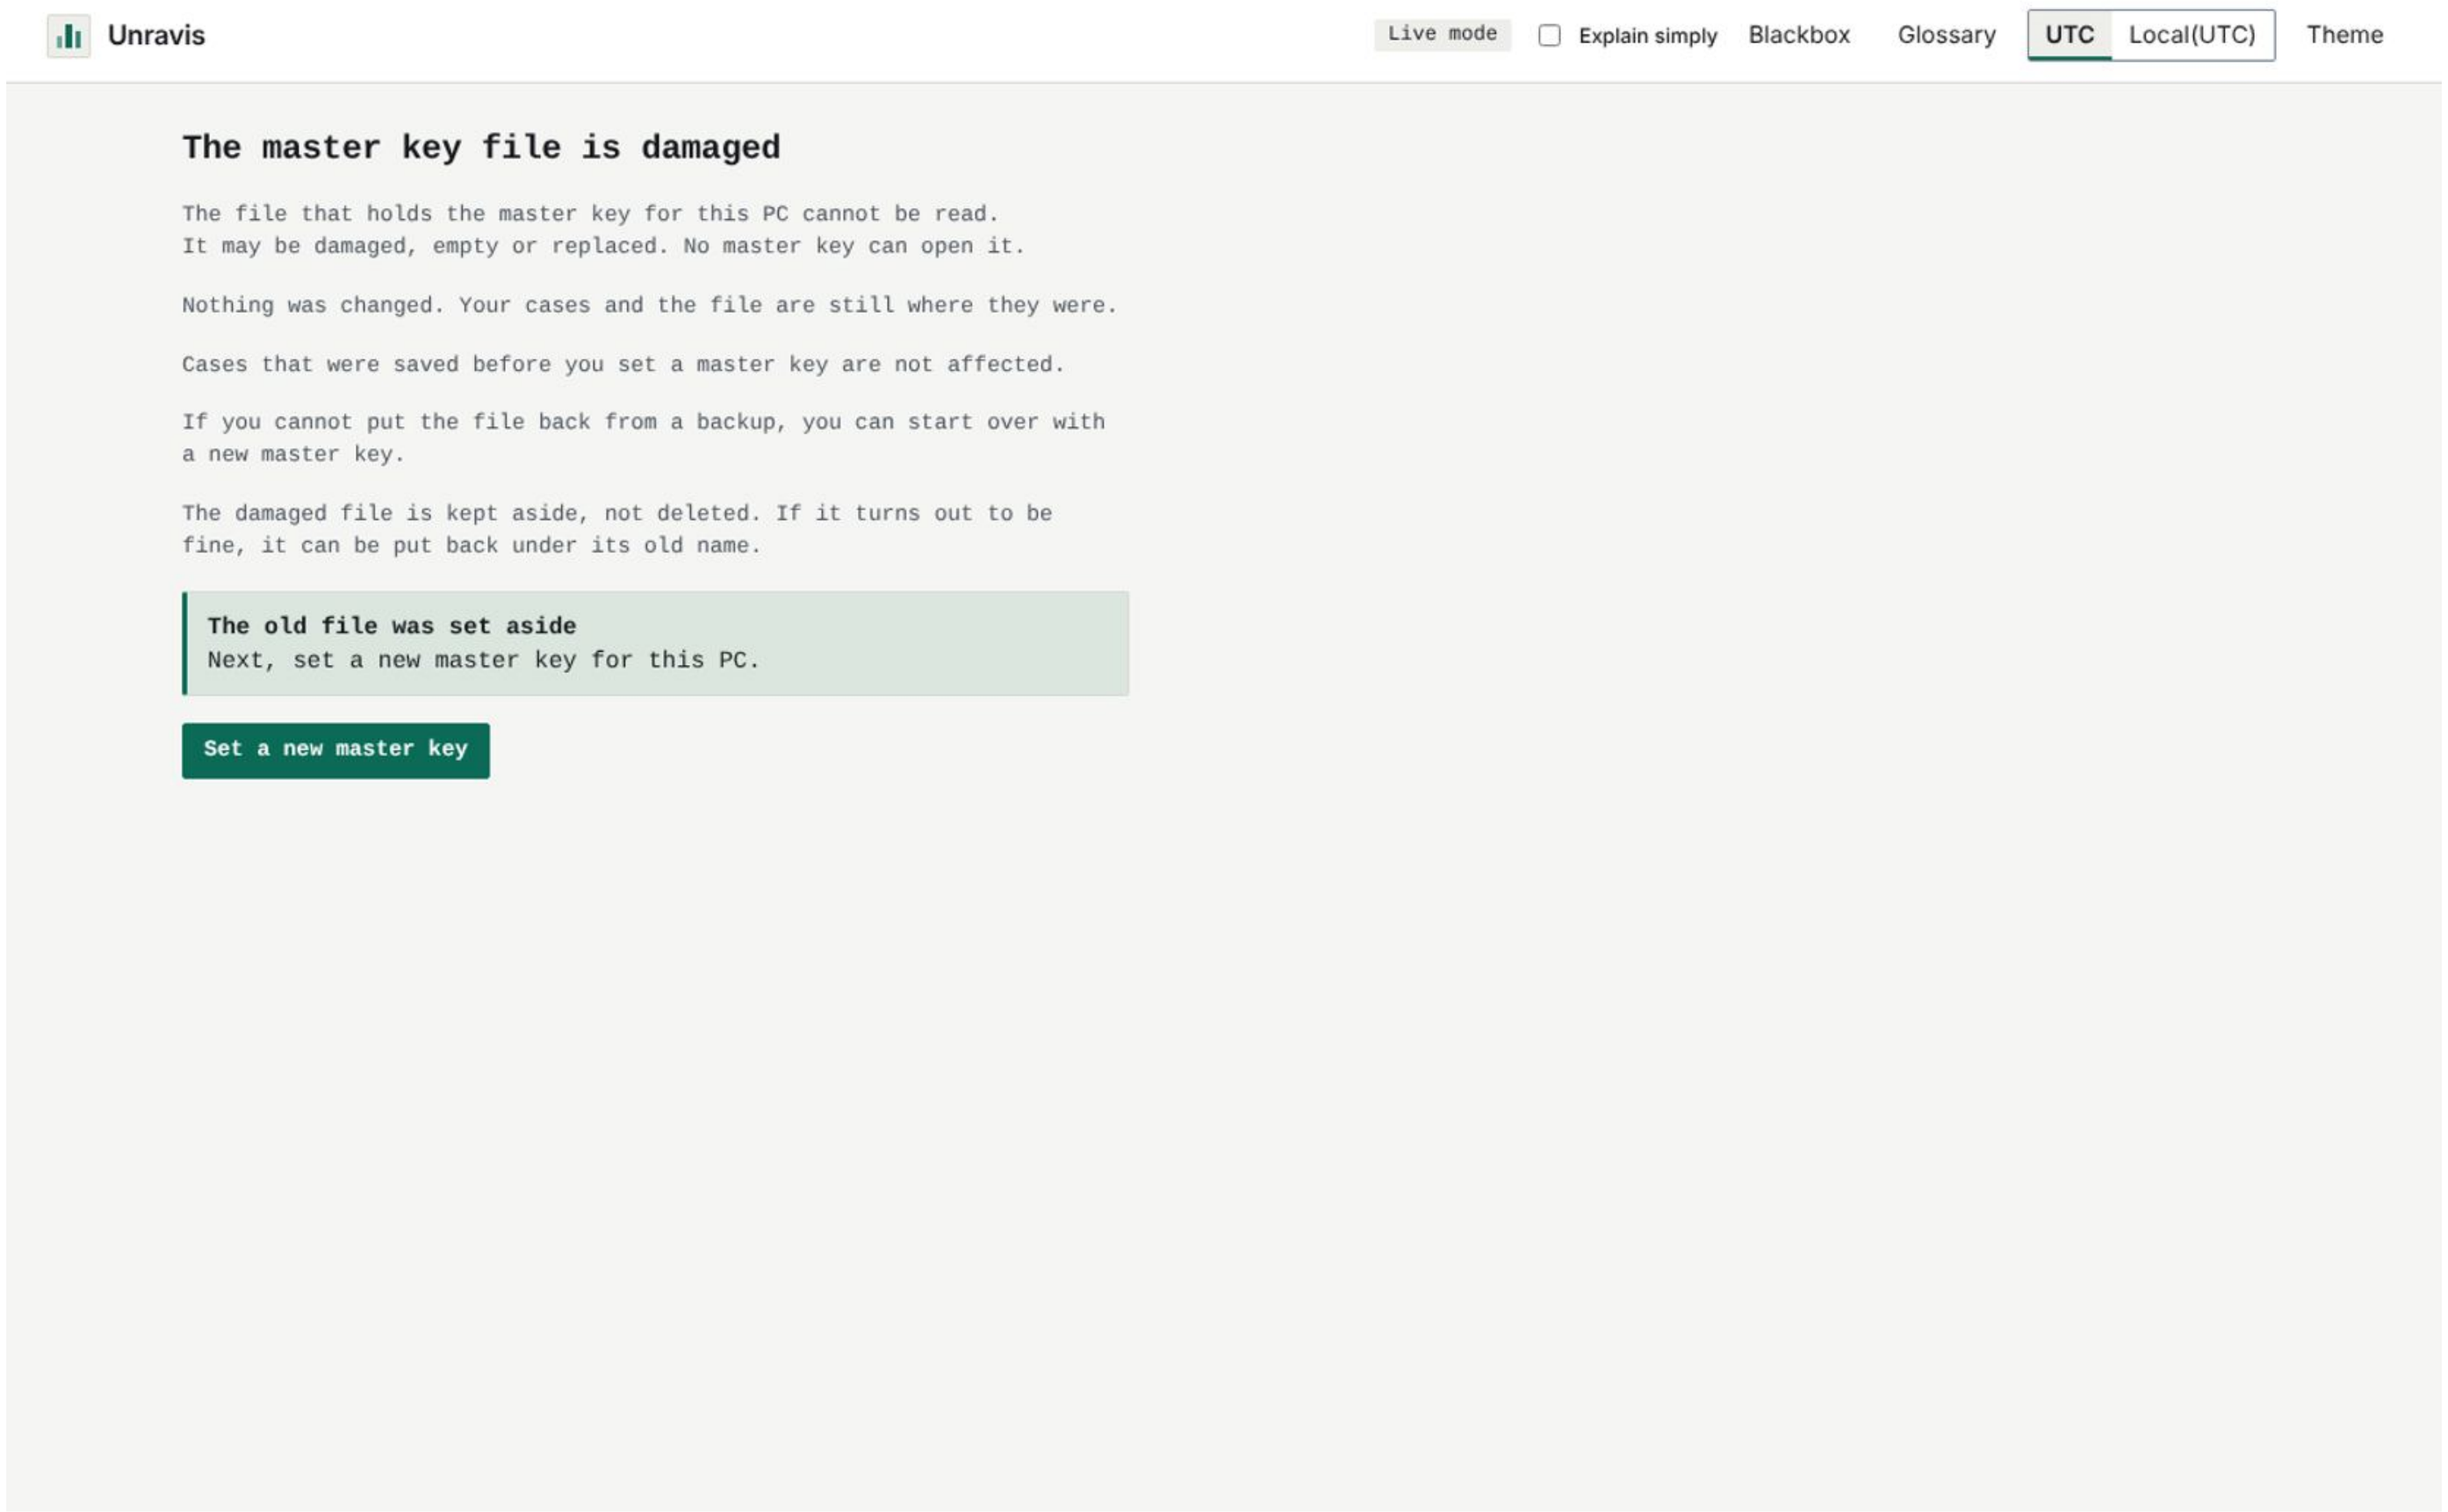

Image 009-key-set-new-key-button-does-nothing.png

What it shows: After pressing Set a new master key the prototype stays on this screen: its own move rules refuse the step from the unlock screen to the set-up form (a prototype gap; the fresh-PC route, Launch the app as Fresh PC, reaches the form).
How to reach it: Press Set a new master key (nothing visible happens).

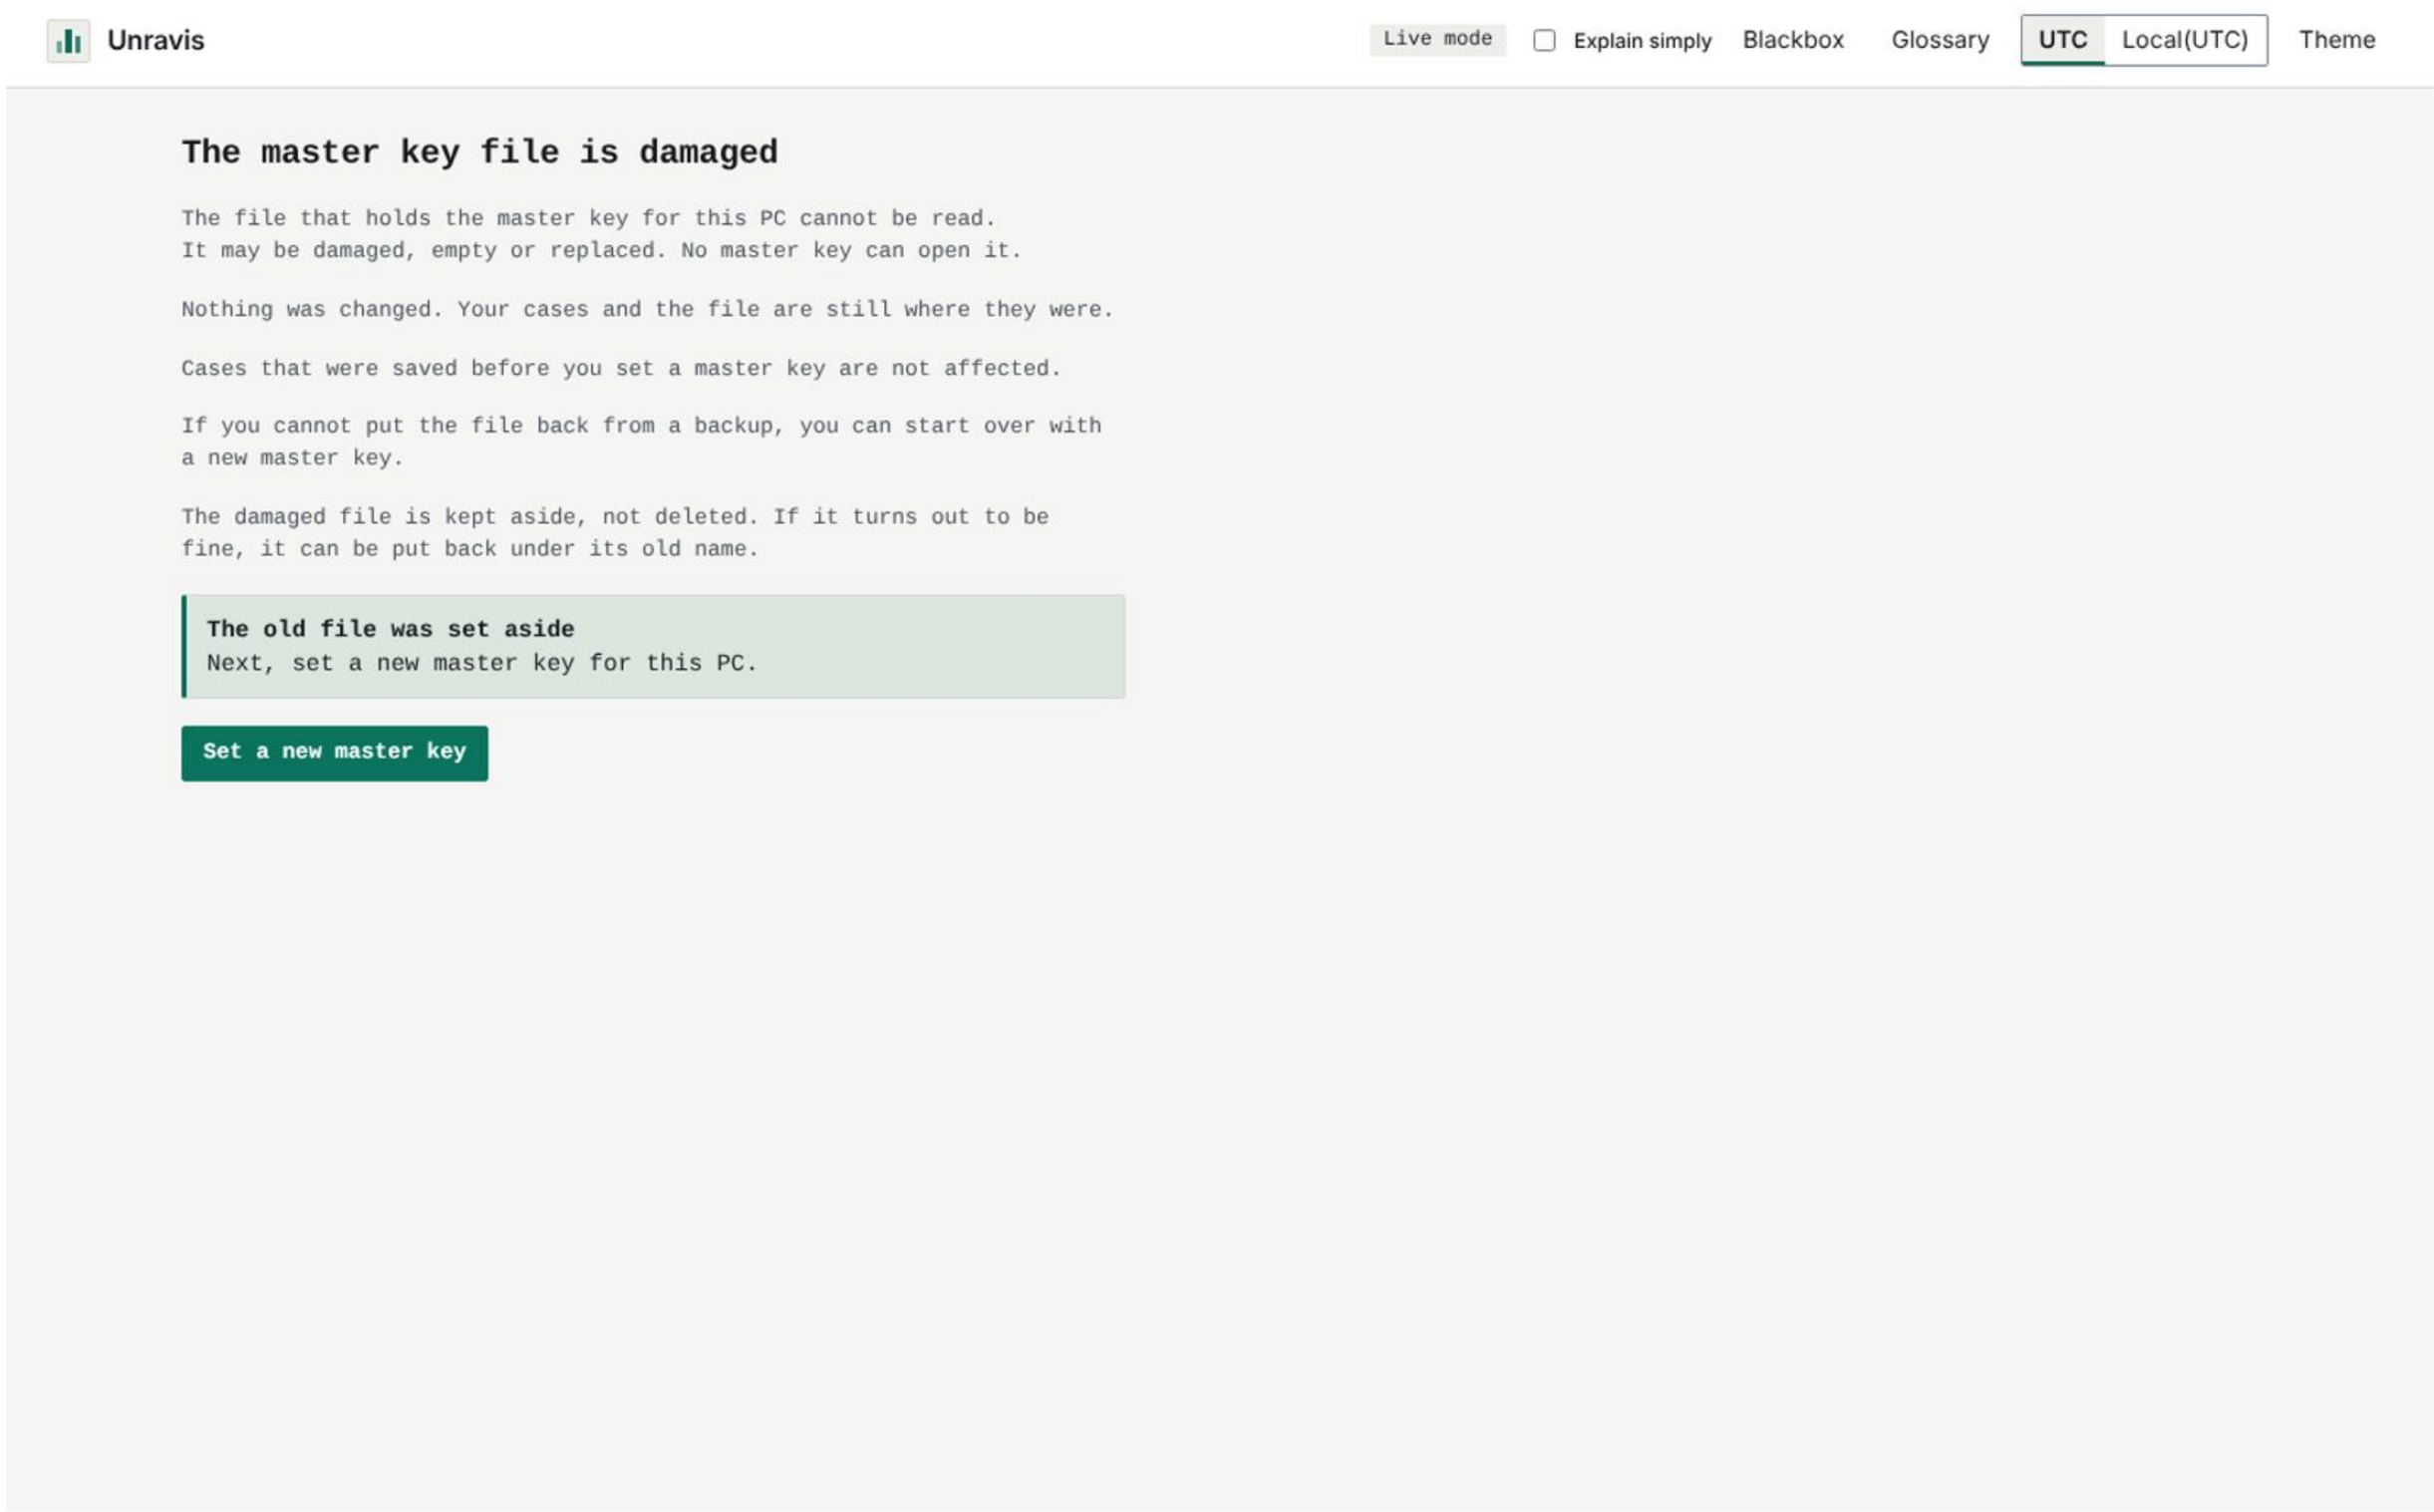

Image 010-fresh-pc-start-screen.png

What it shows: First launch on a new PC: the start screen offers to protect cases with a master key.
How to reach it: Scenario s-fresh (Launch conditions: Fresh PC).

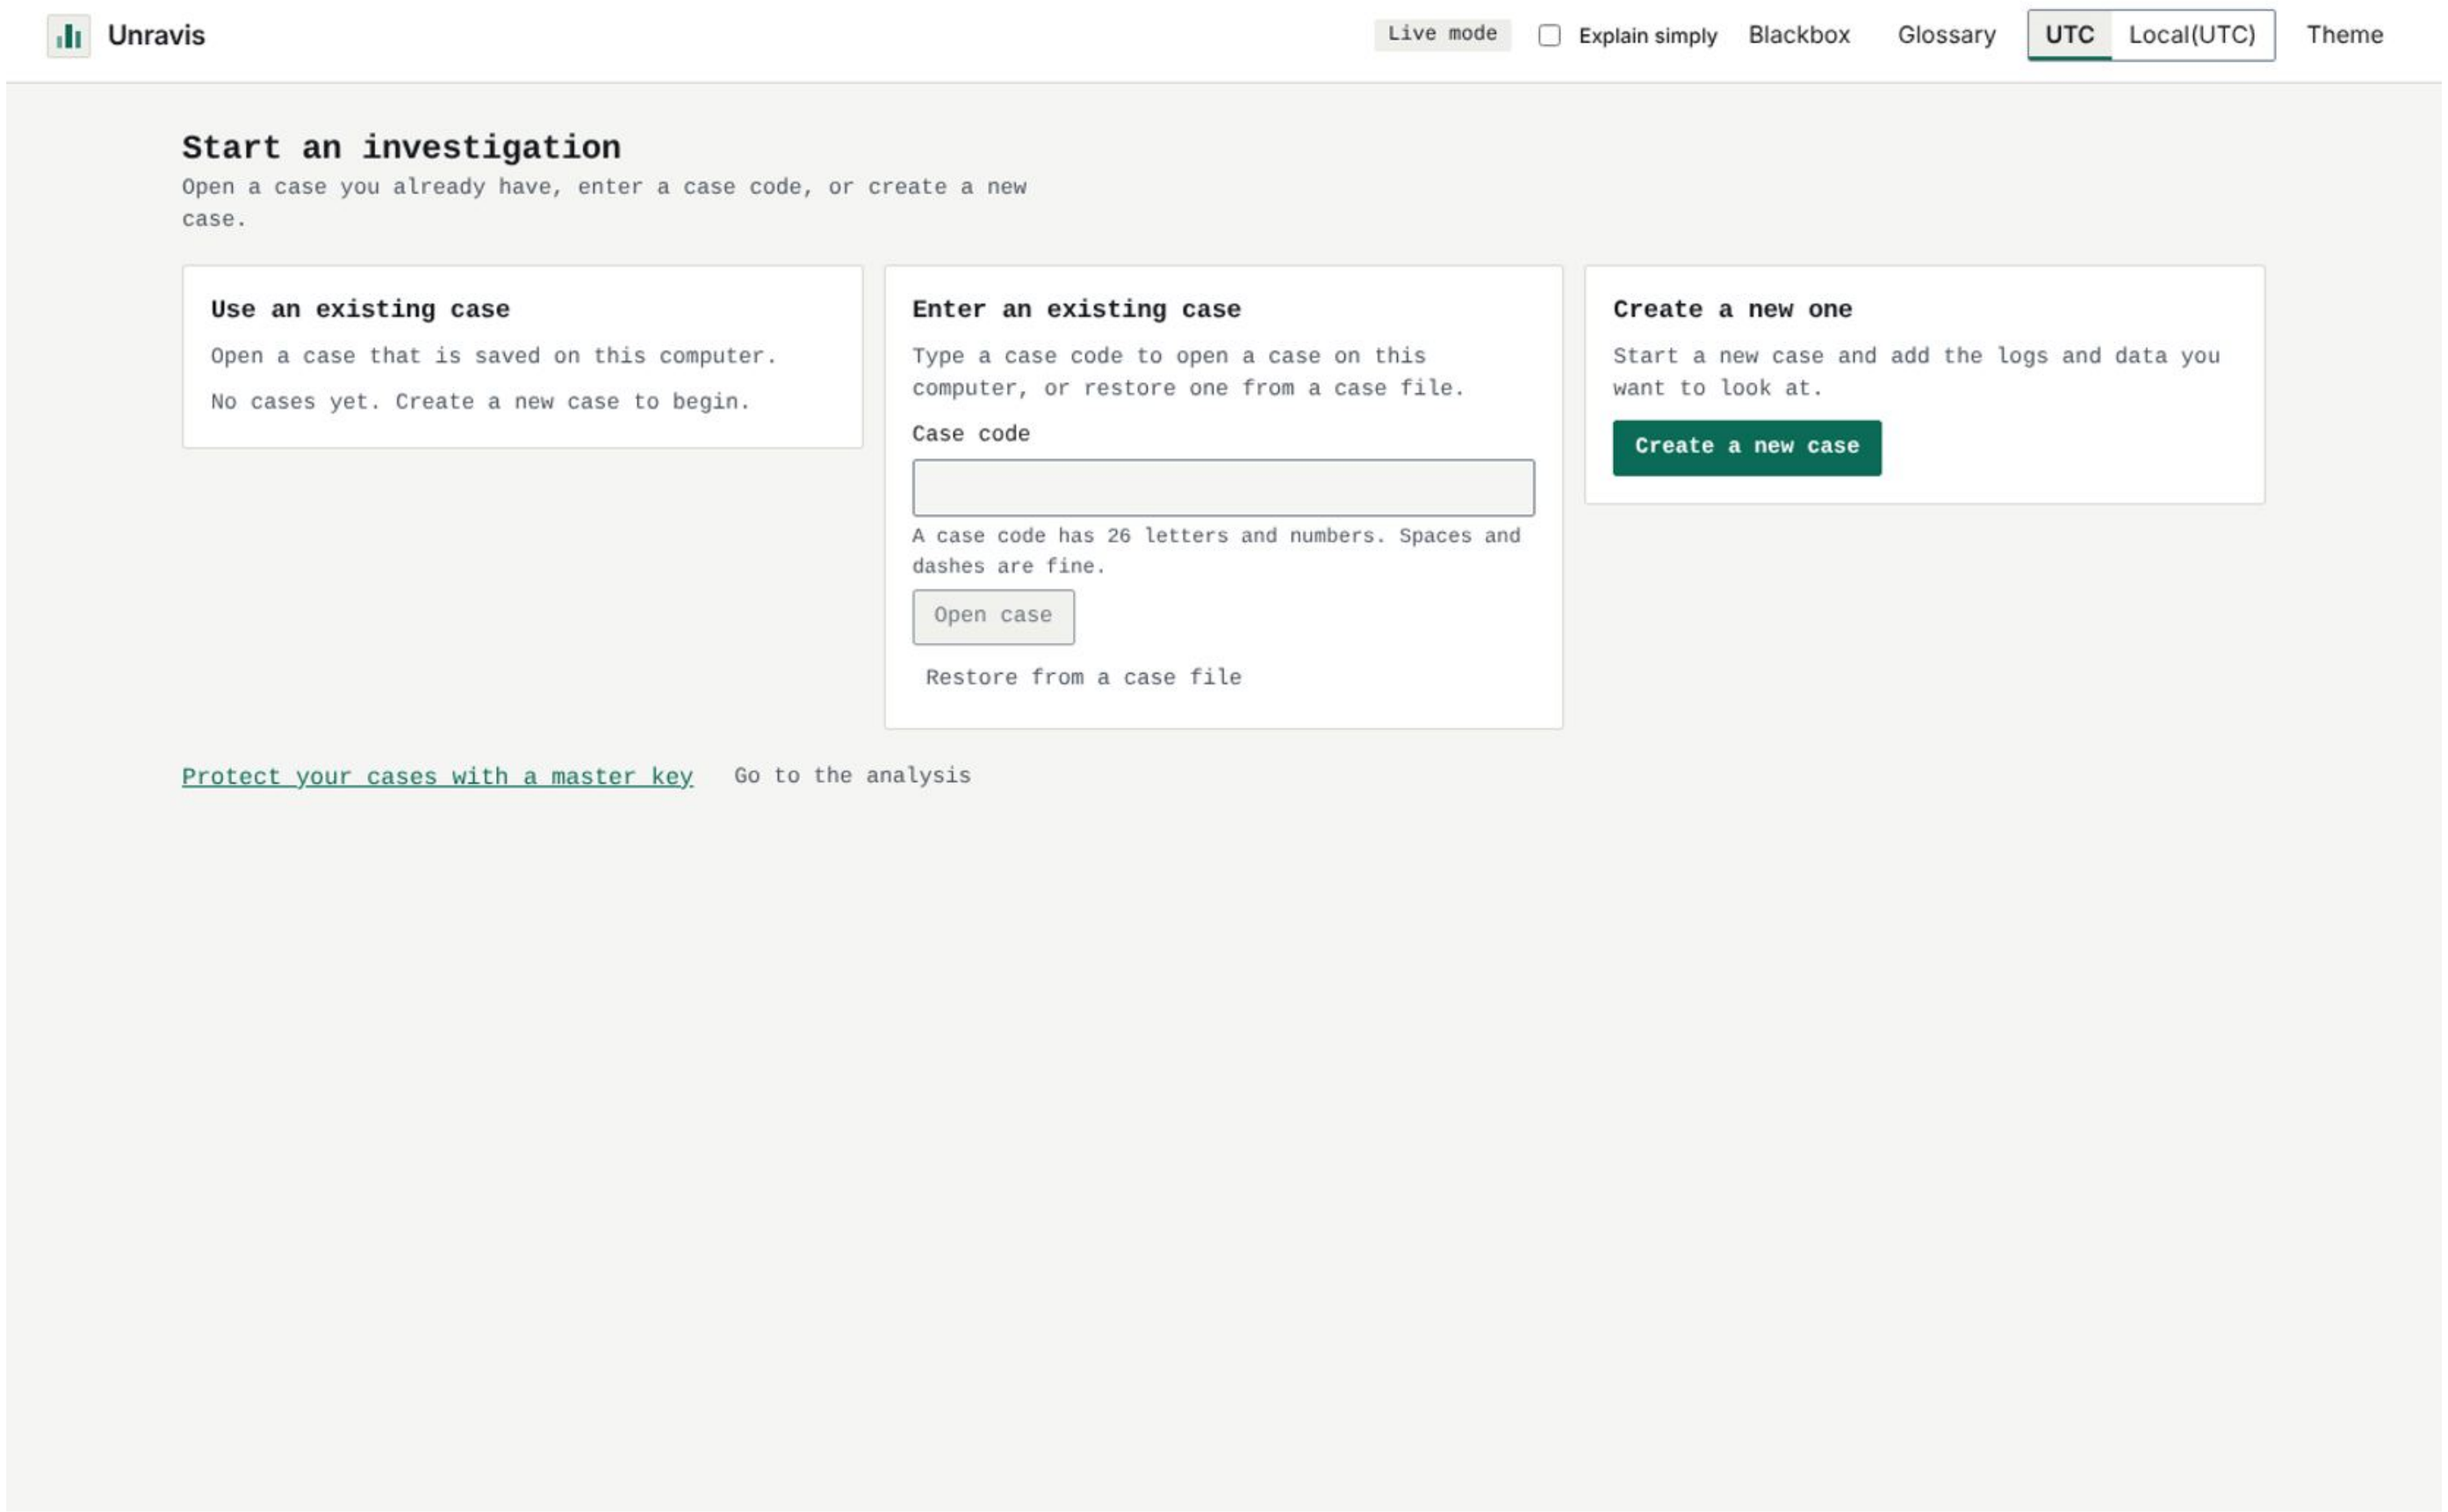

Image 011-master-key-setup-form.png

What it shows: The set-up form for a master key.
How to reach it: Press Protect your cases with a master key.

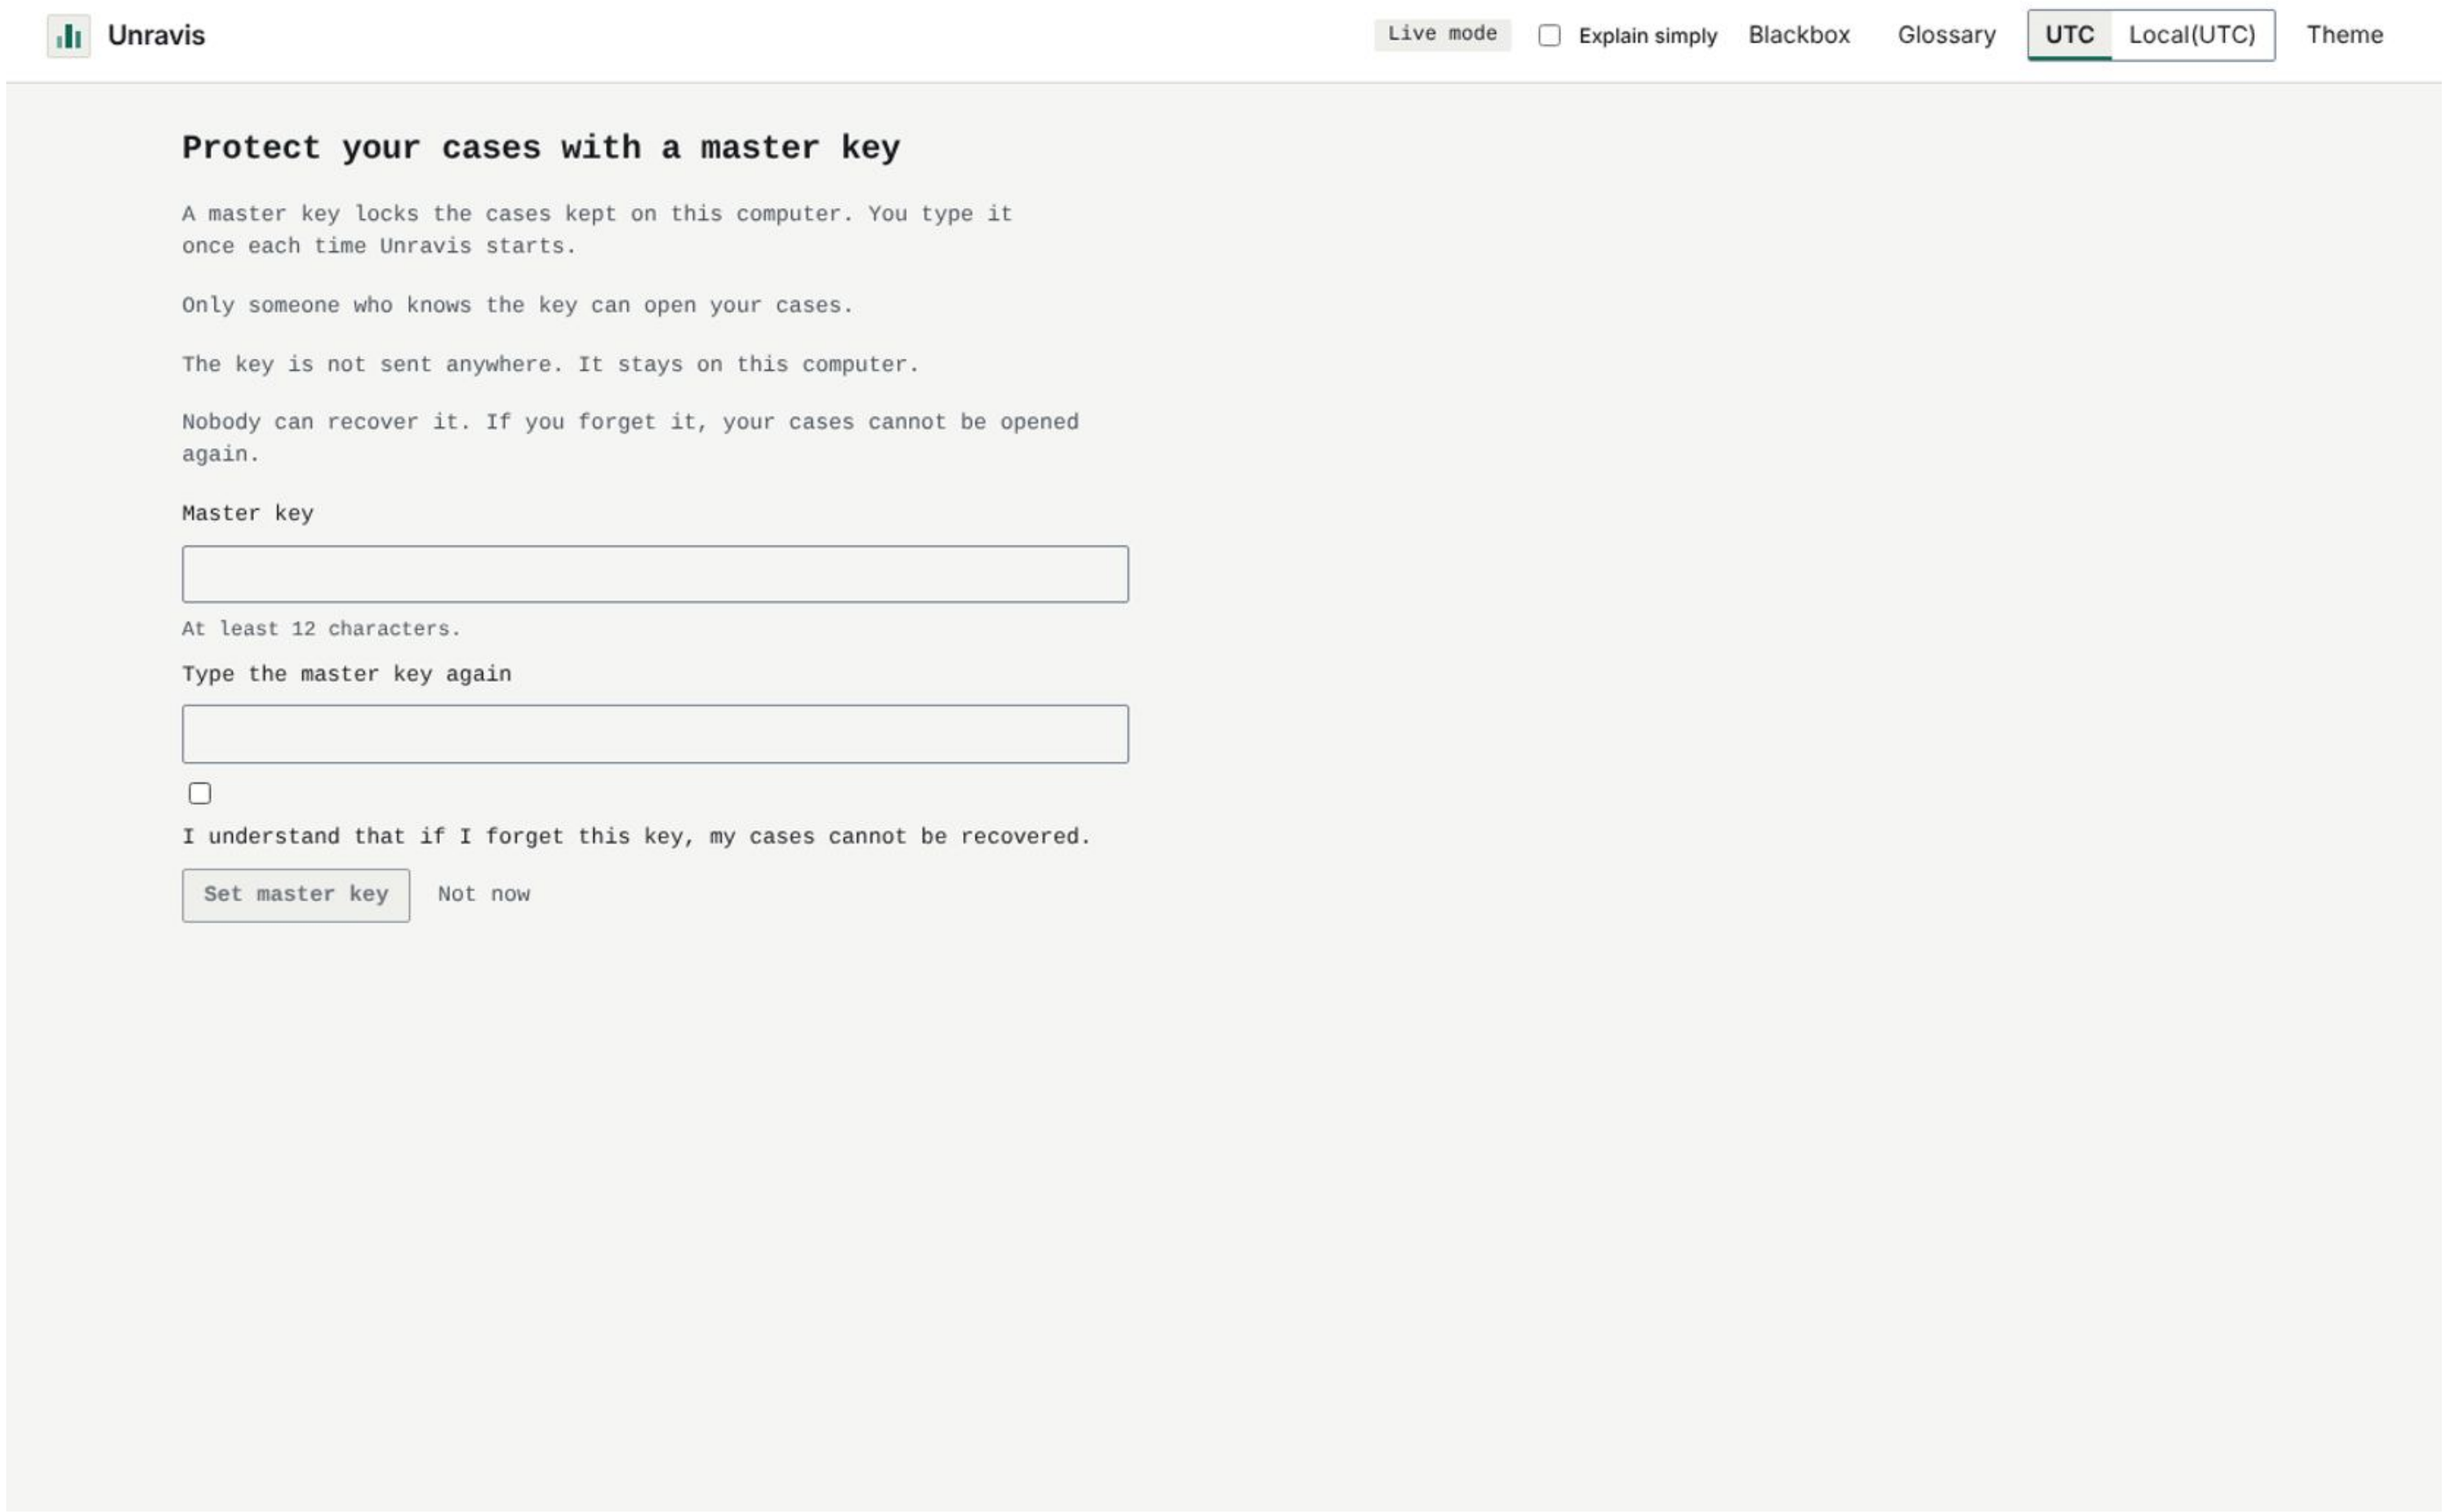

Image 012-master-key-too-short.png

What it shows: A master key that is too short is explained at once.
How to reach it: Type 3 characters in the first field.

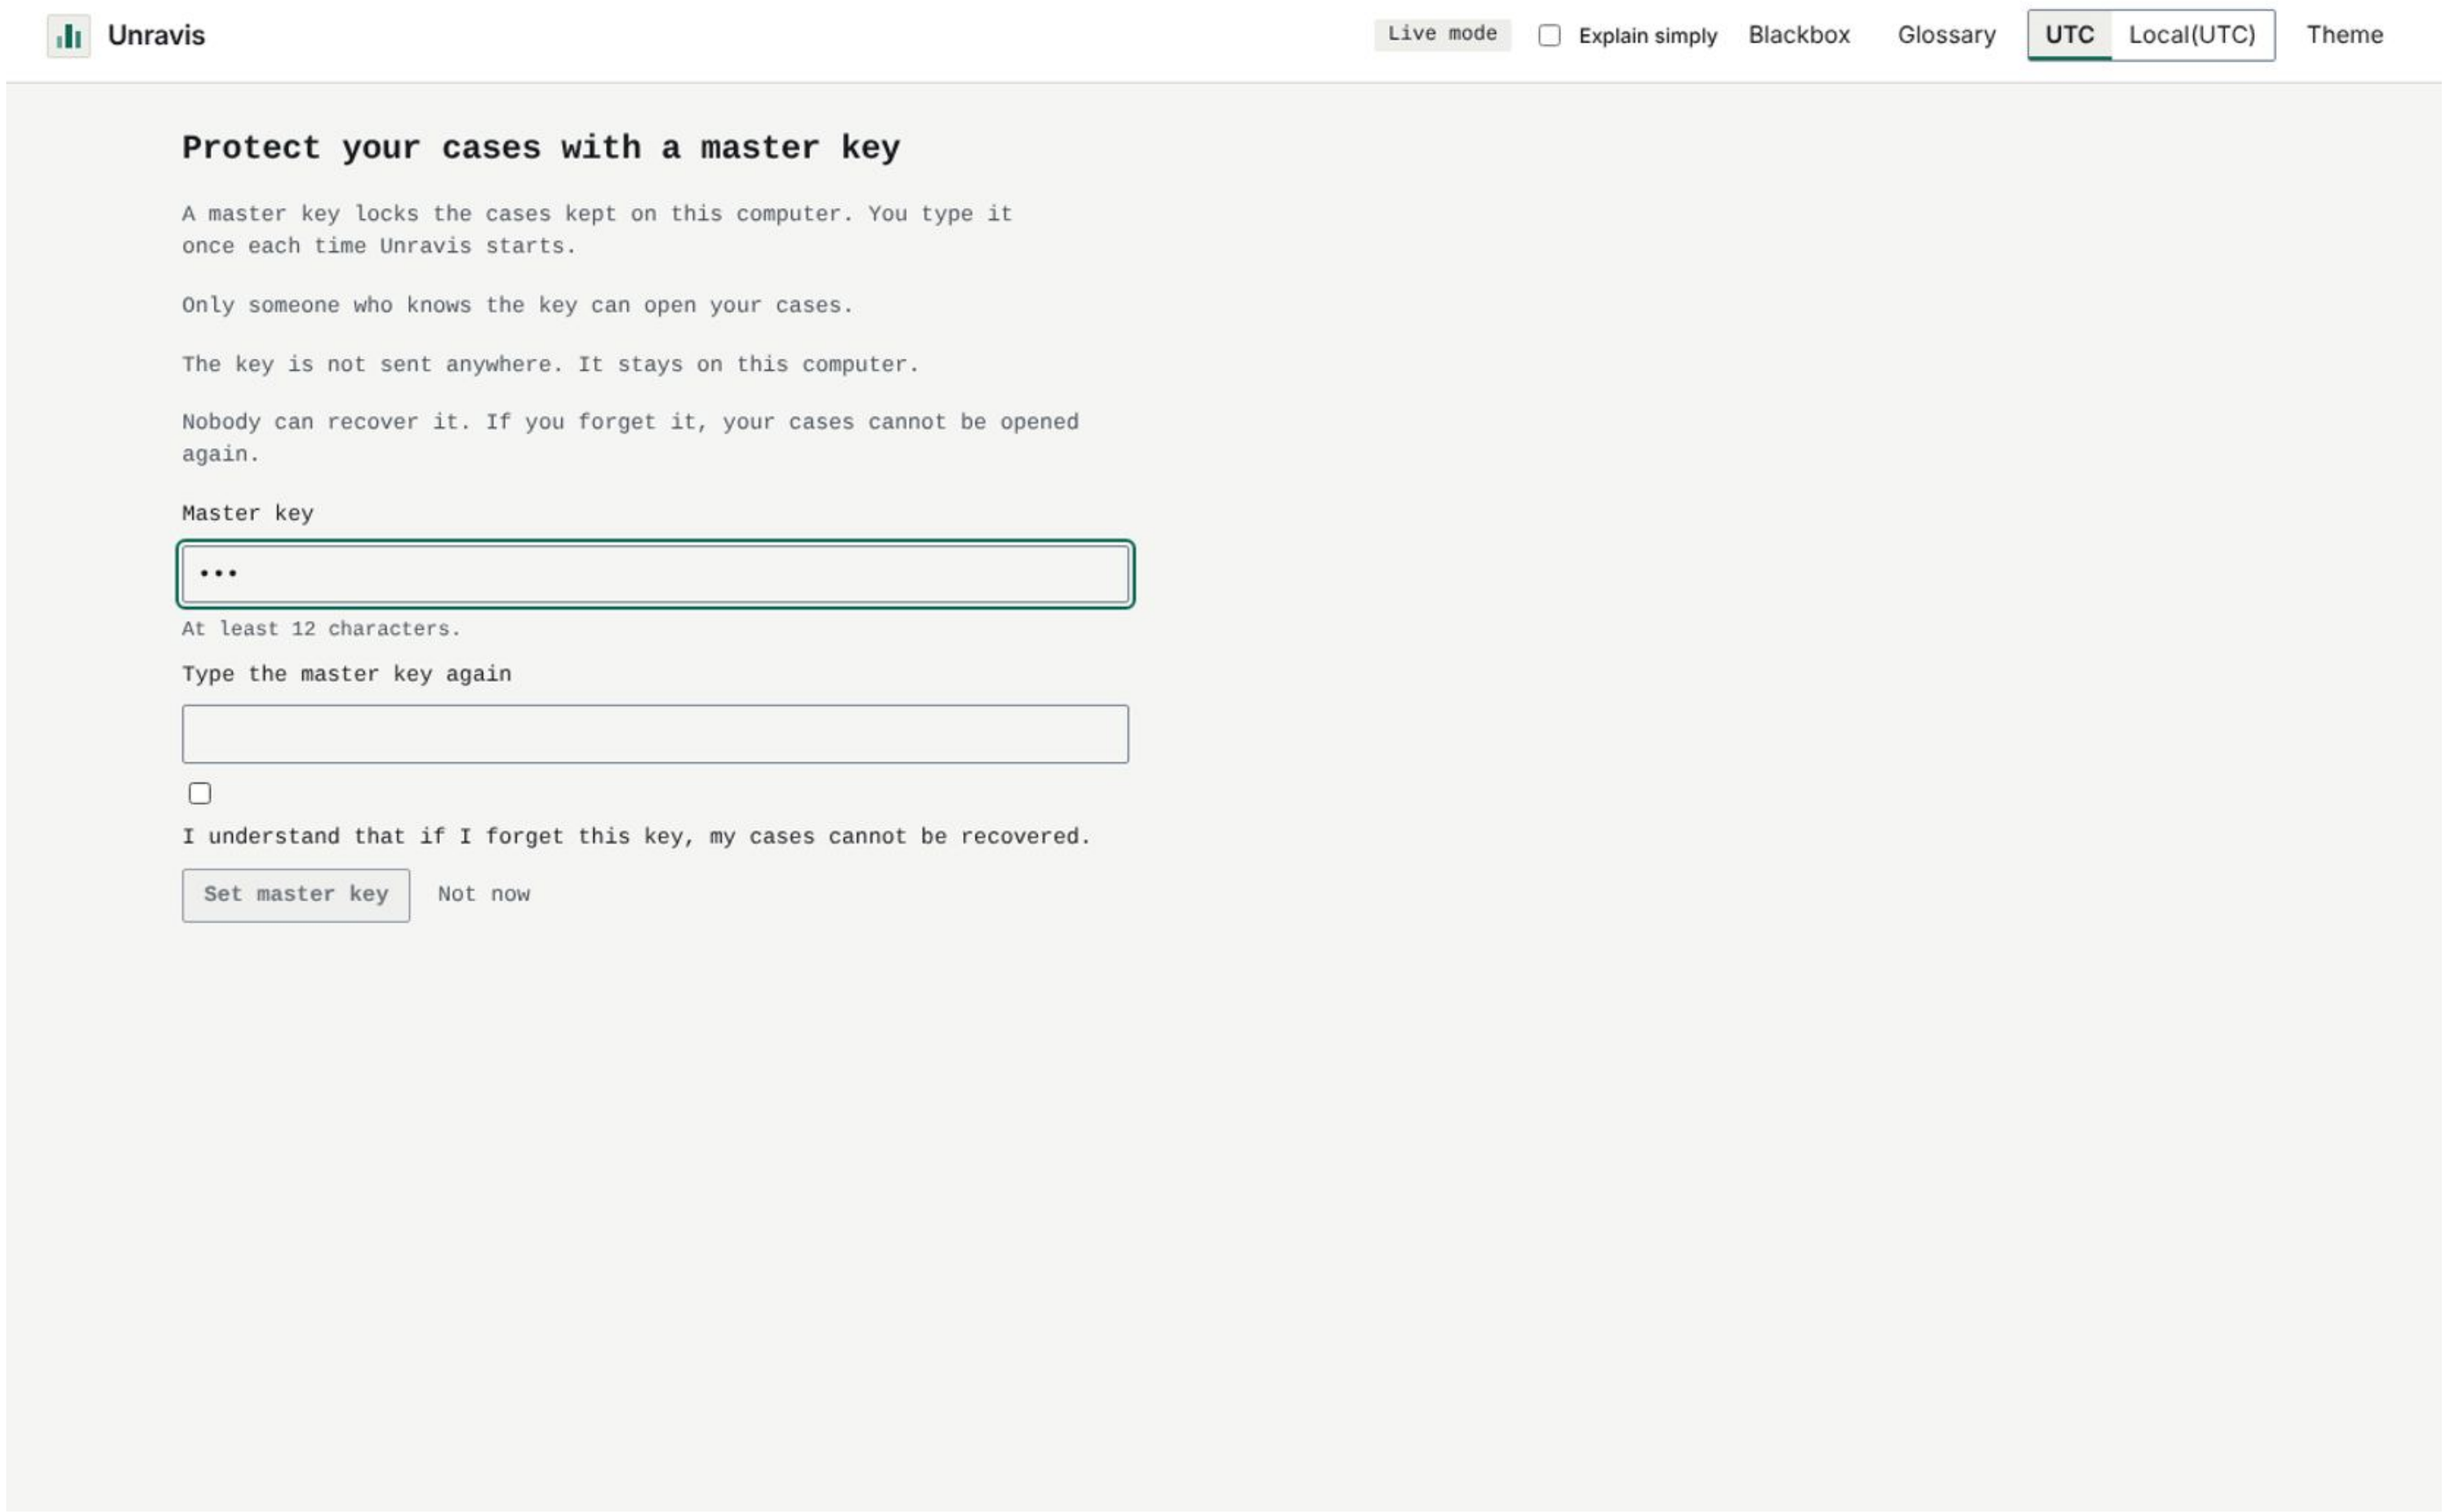

Image 013-master-key-mismatch.png

What it shows: The two entries differ: the form says so.
How to reach it: Type a long key in the first field and a different one in the second.

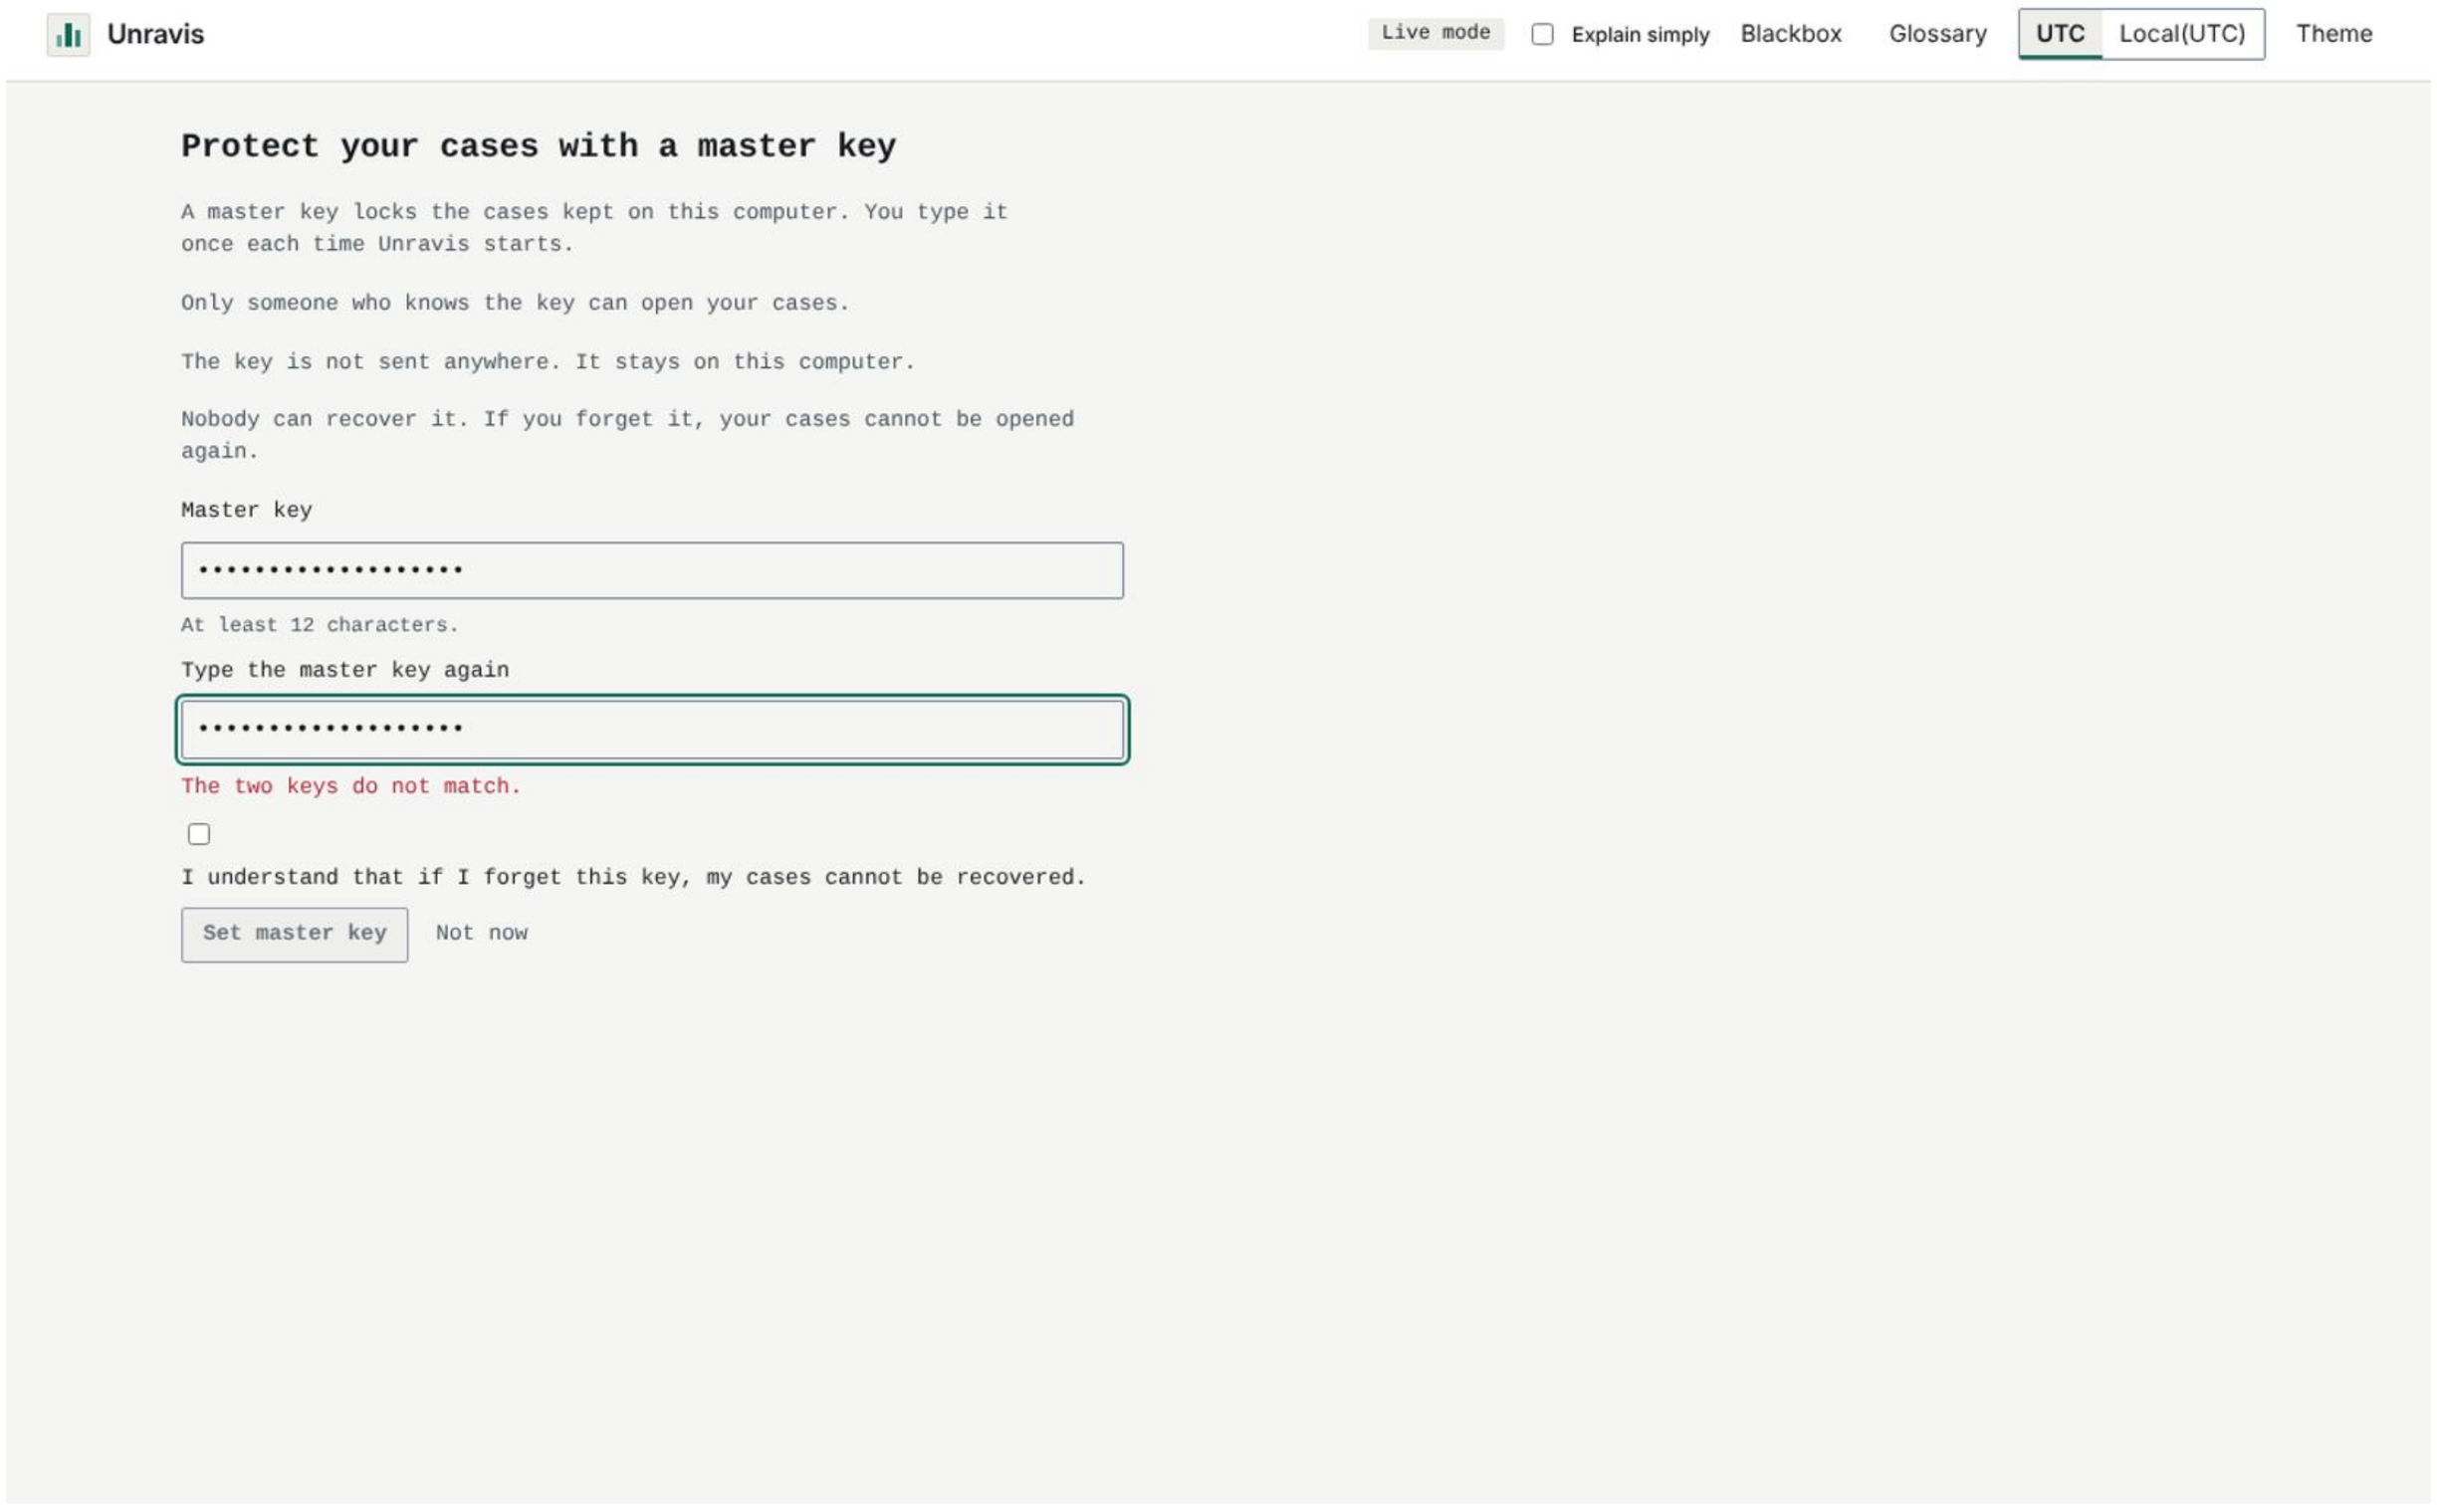

Image 014-master-key-set-done.png

What it shows: Key set: back on the start screen (the header now shows Lock cases).
How to reach it: Make both fields equal, tick the confirmation box if shown, press Set master key.

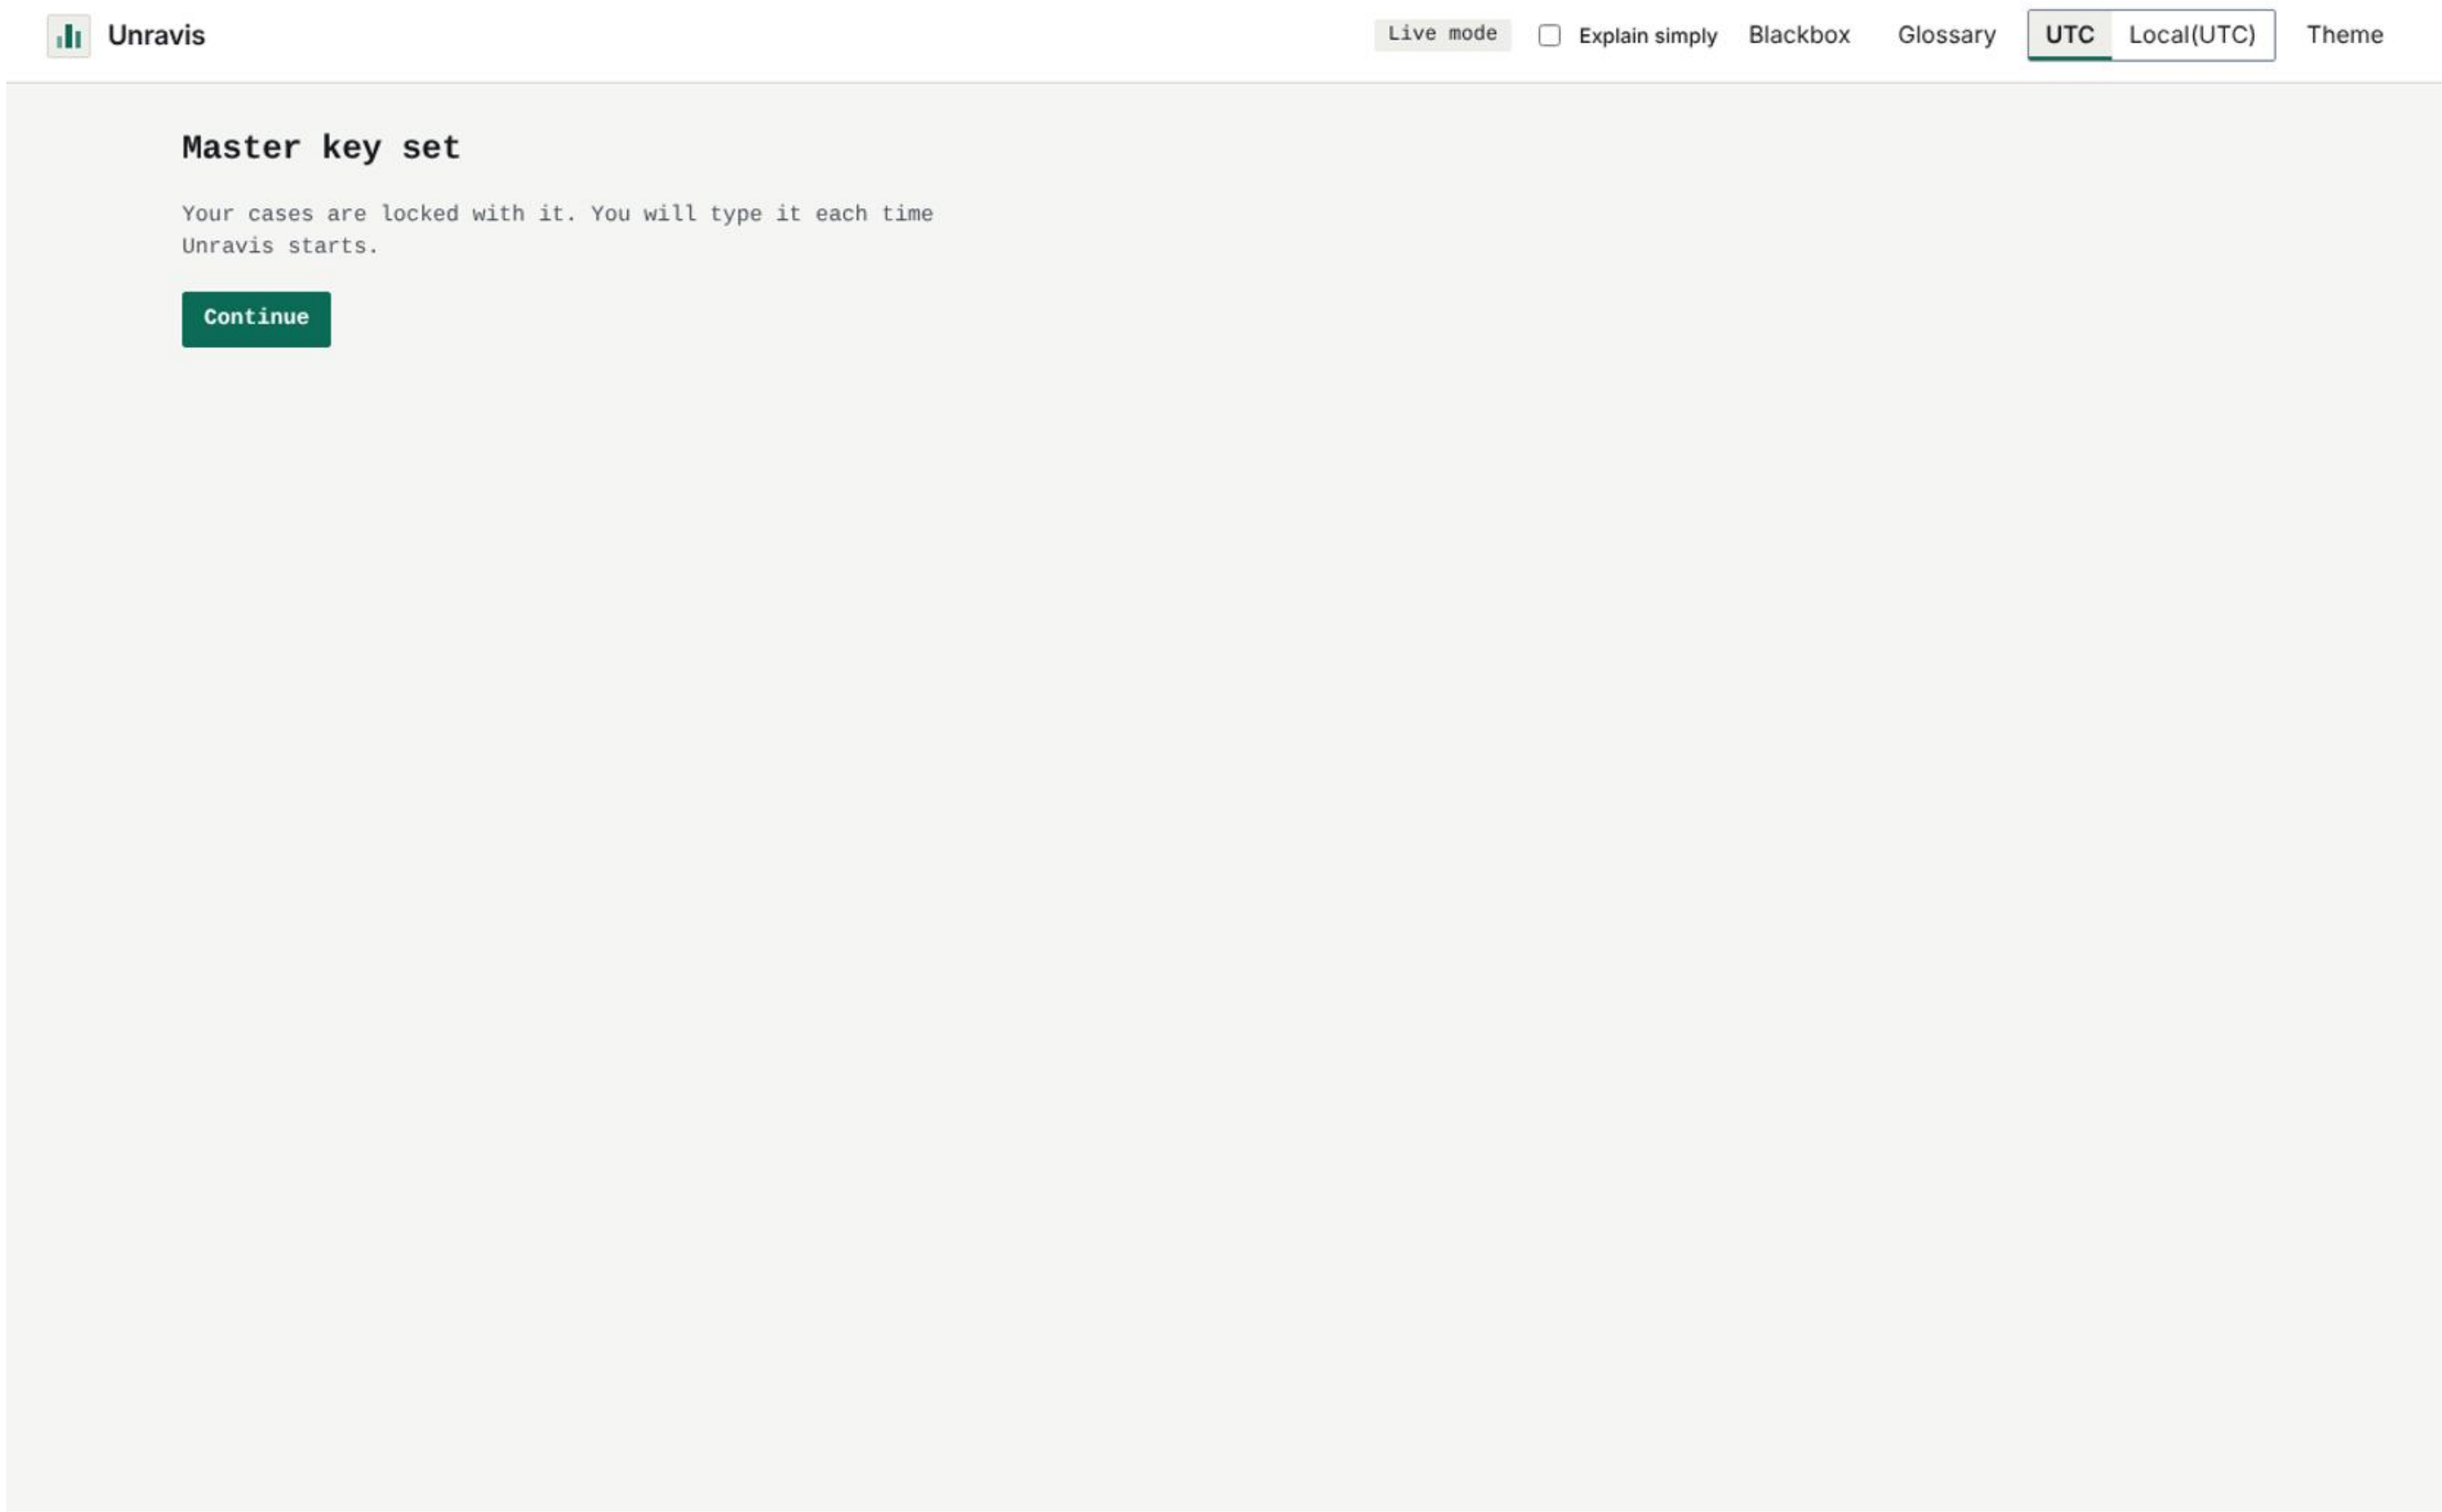

Image 015-start-three-cards.png

What it shows: The start screen: Use an existing case, Enter an existing case, Create a new one.
How to reach it: Launch normally.

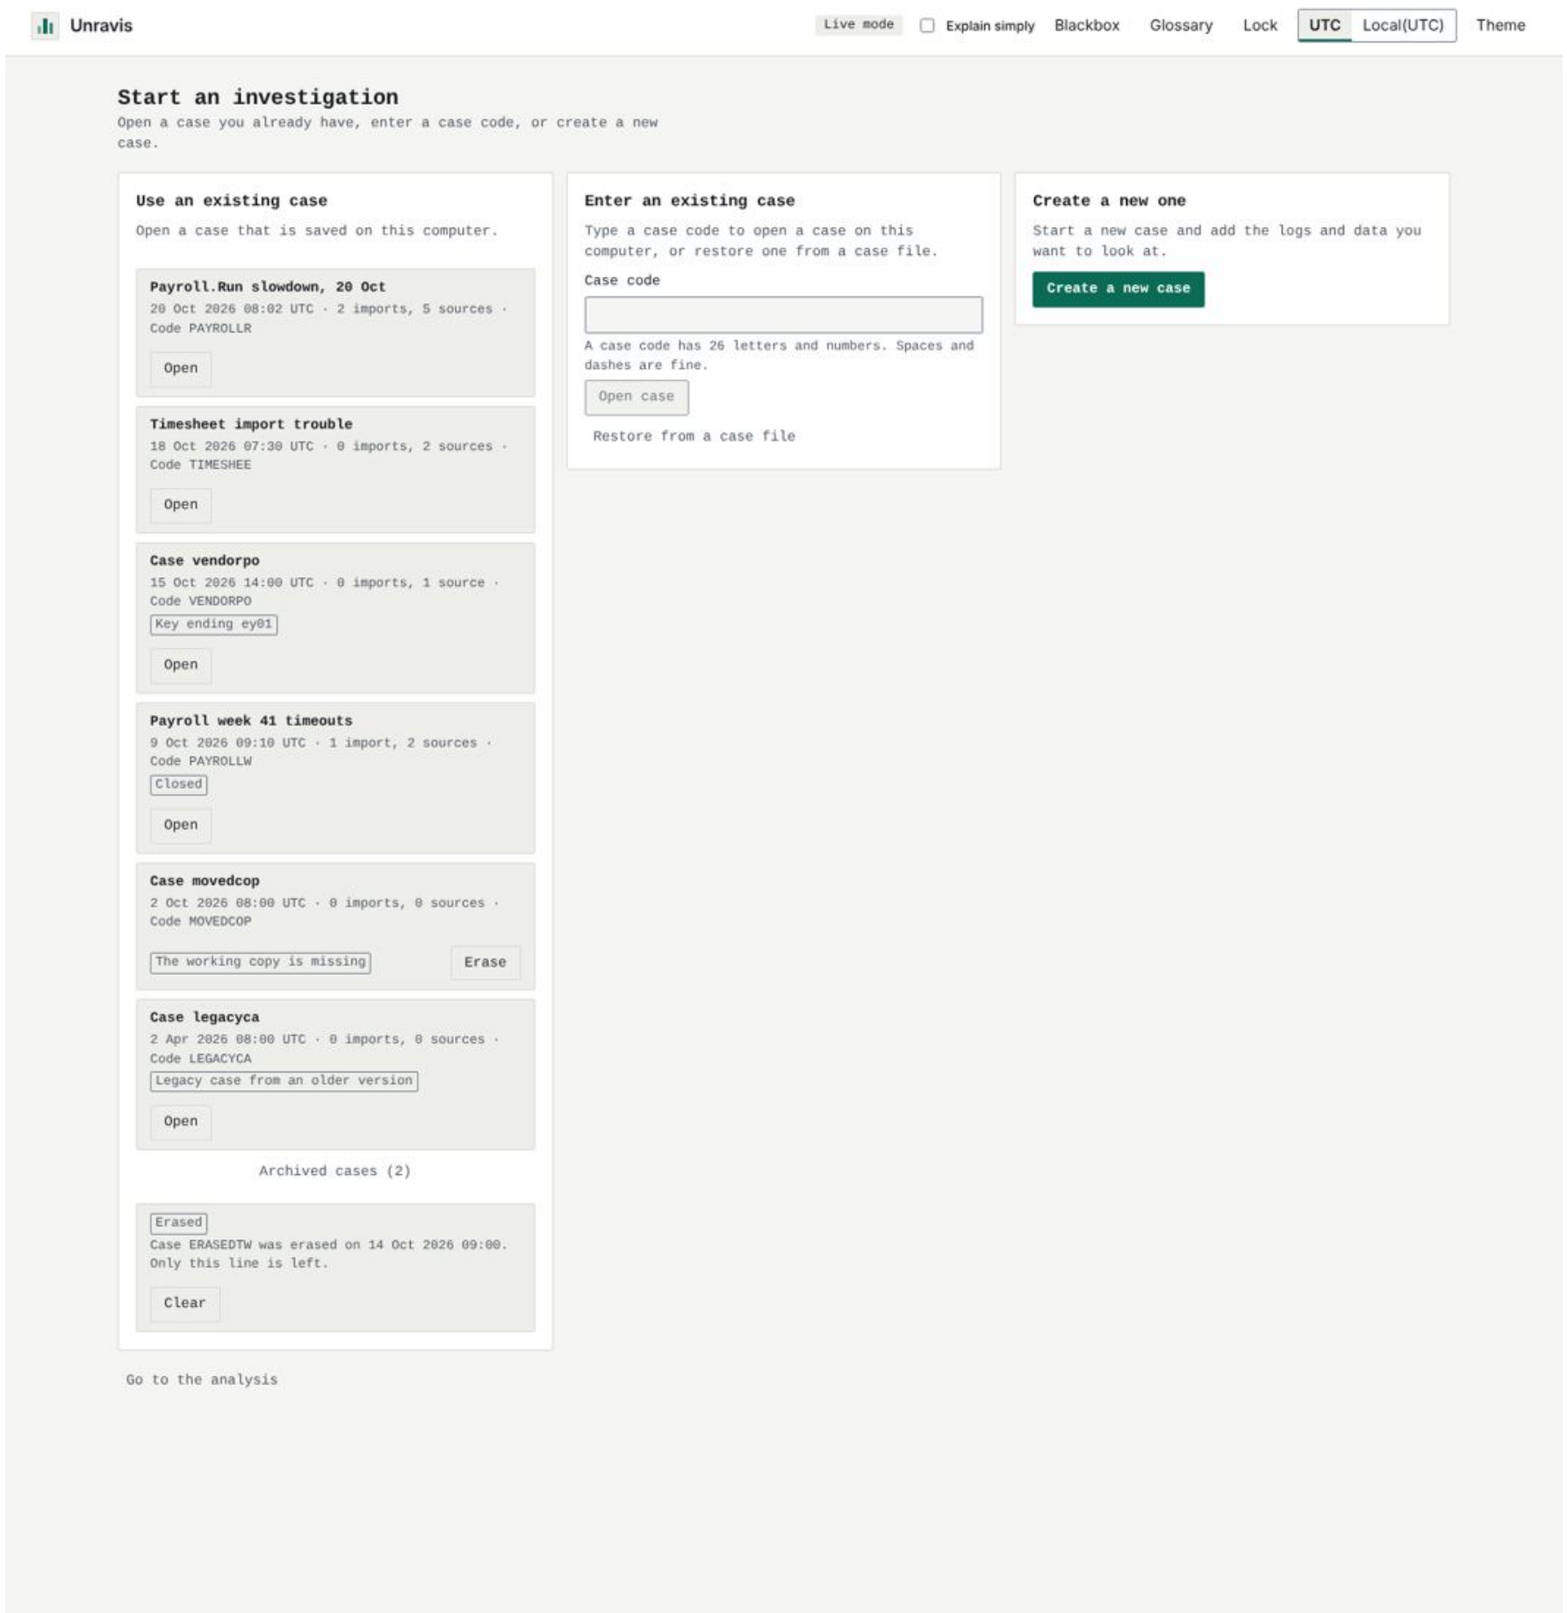

Image 016-start-card-existing-list.png

What it shows: The case list with the different row states: open, closed, own key, needs another try, working copy missing, legacy, erased.
How to reach it: Start screen, left card.

Image 017-start-card-enter.png

What it shows: The Enter an existing case card: code field, Open case, Restore from a case file.
How to reach it: Start screen, middle card.

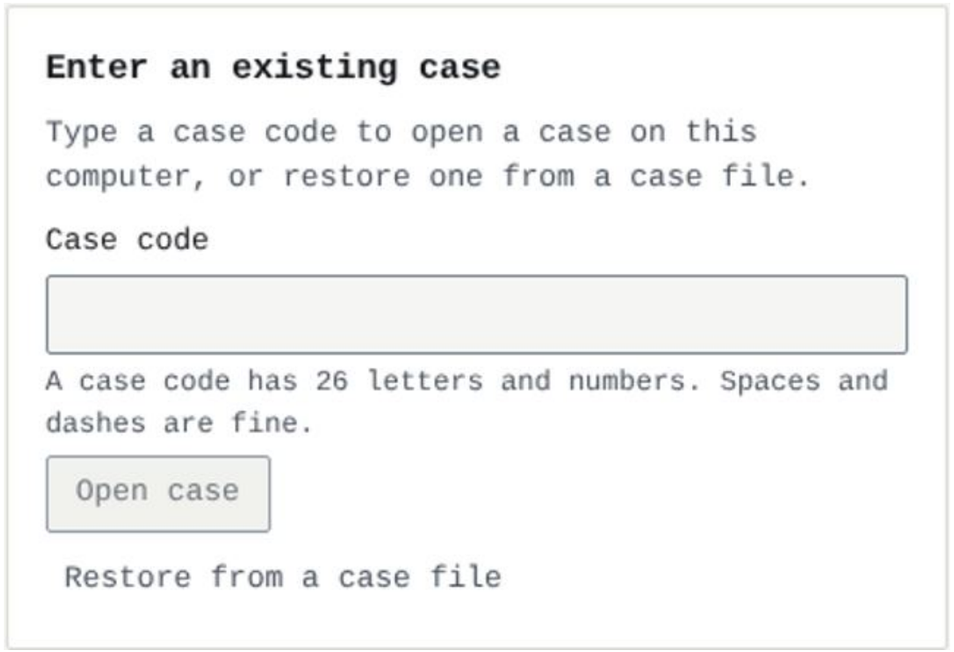

Image 018-start-card-create.png

What it shows: The Create a new one card.
How to reach it: Start screen, right card.

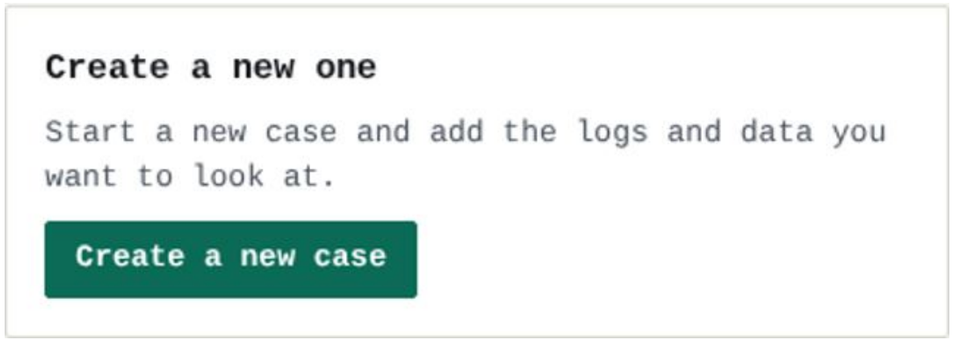

Image 019-start-erase-missing-copy.png

What it shows: Erasing a case whose working copy is missing asks for its code.
How to reach it: Press Erase: Case whose files were moved.

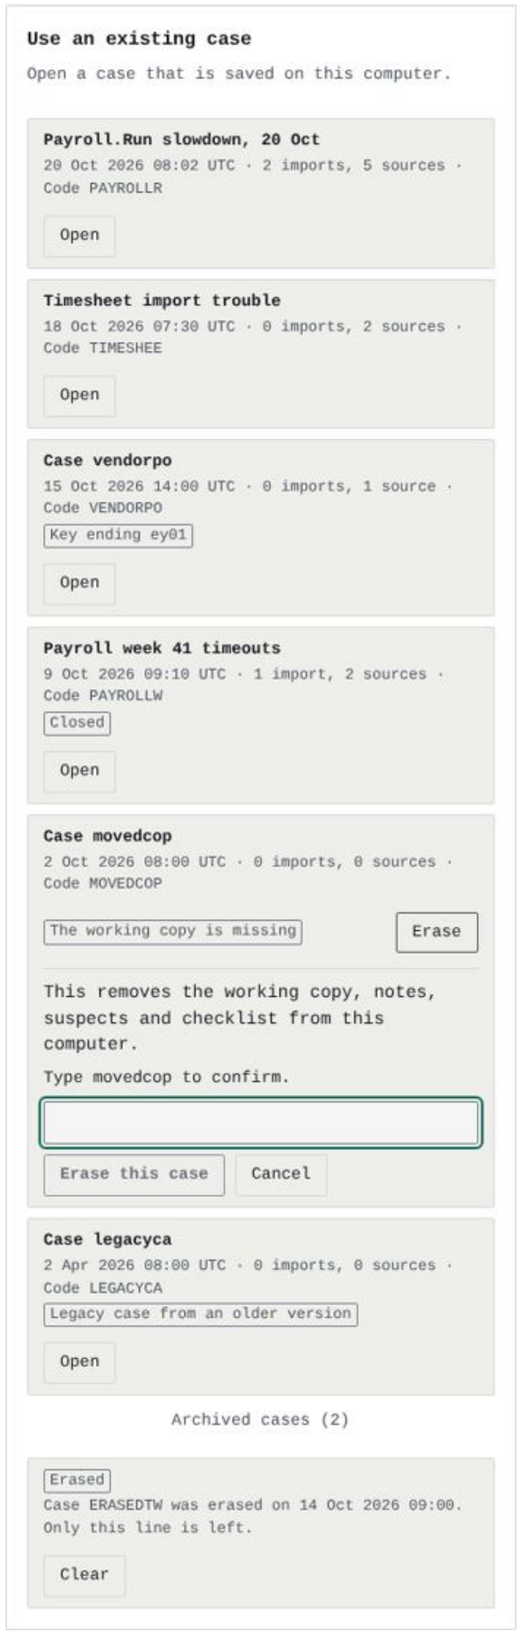

Image 020-start-erase-typed-code.png

What it shows: The erase prompt with the code typed: Type movedcop to confirm.
How to reach it: Type movedcop in the box.

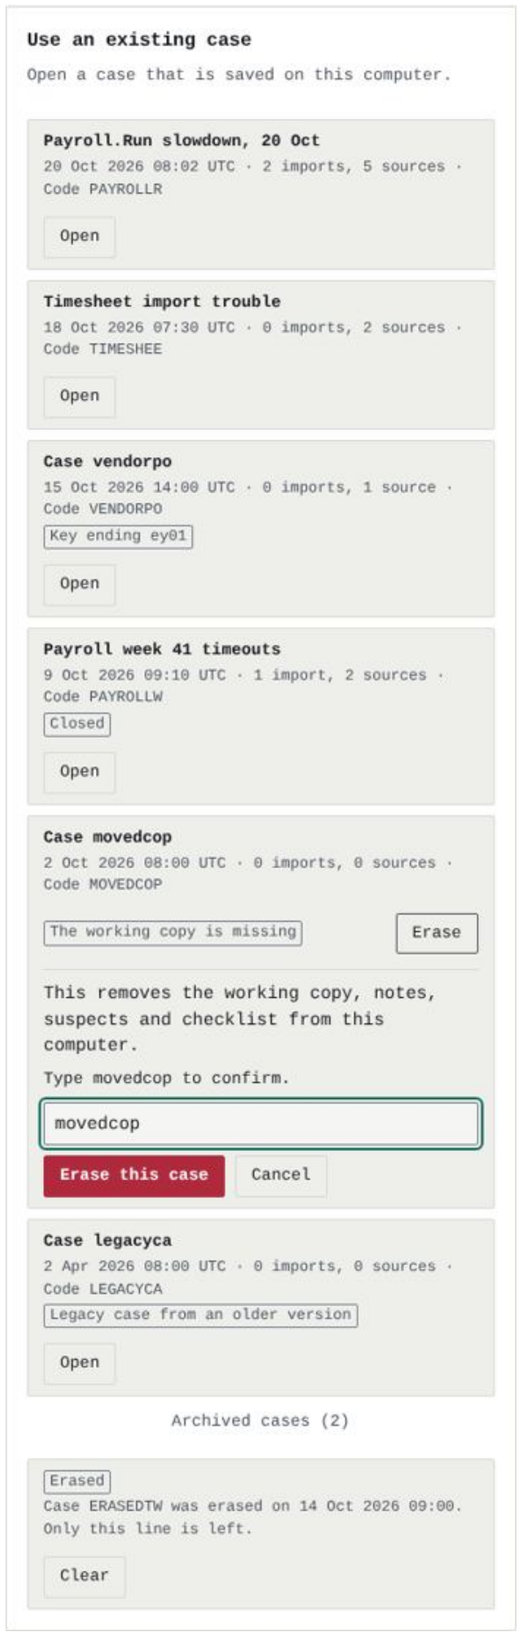

Image 021-start-erased-line-after-erase.png

What it shows: After Erase this case: only one line is left, saying the case was erased, with Clear.
How to reach it: Press Erase this case.

Image 022-start-erased-lines-cleared.png

What it shows: Clear removes the erased lines from the list.
How to reach it: Press Clear.

Image 023-start-archived-list.png

What it shows: The Archived cases toggle opened.
How to reach it: Press Archived cases (2).

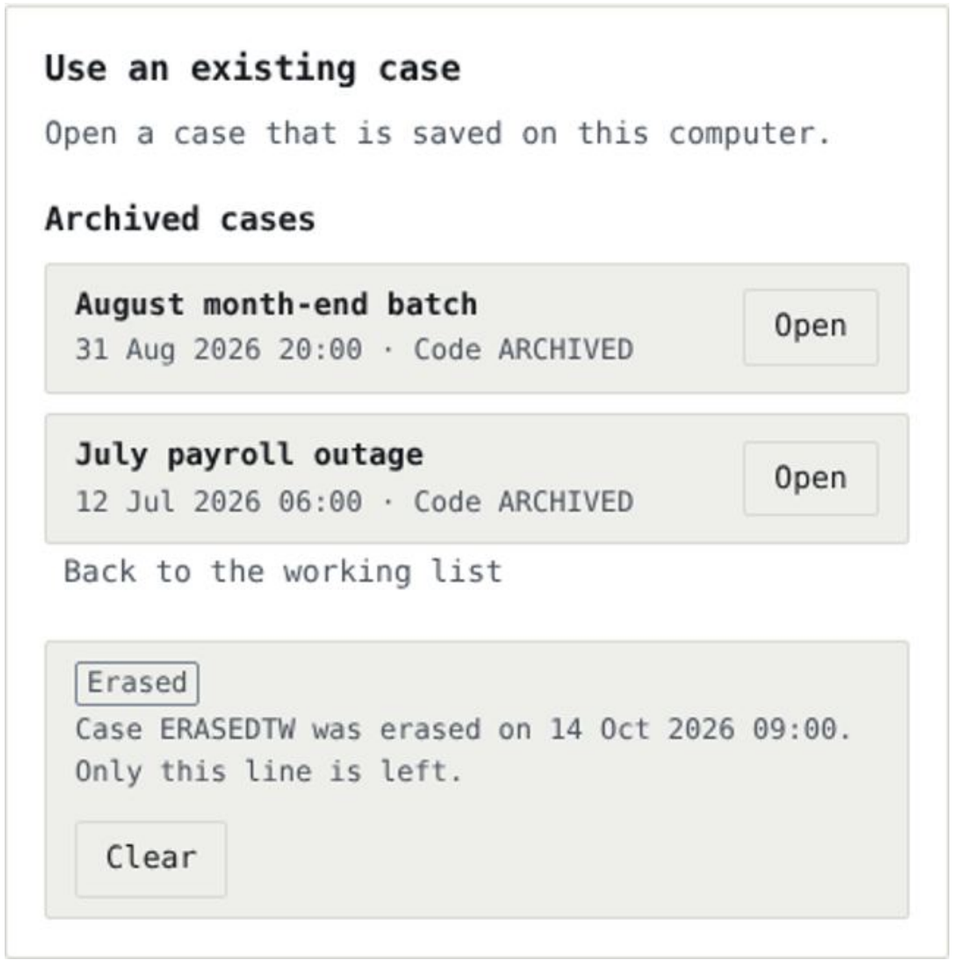

Image 024-start-no-cases-yet.png

What it shows: A new user: the list says there are no cases yet; the three cards are still there.
How to reach it: Scenario s-empty (No cases yet).

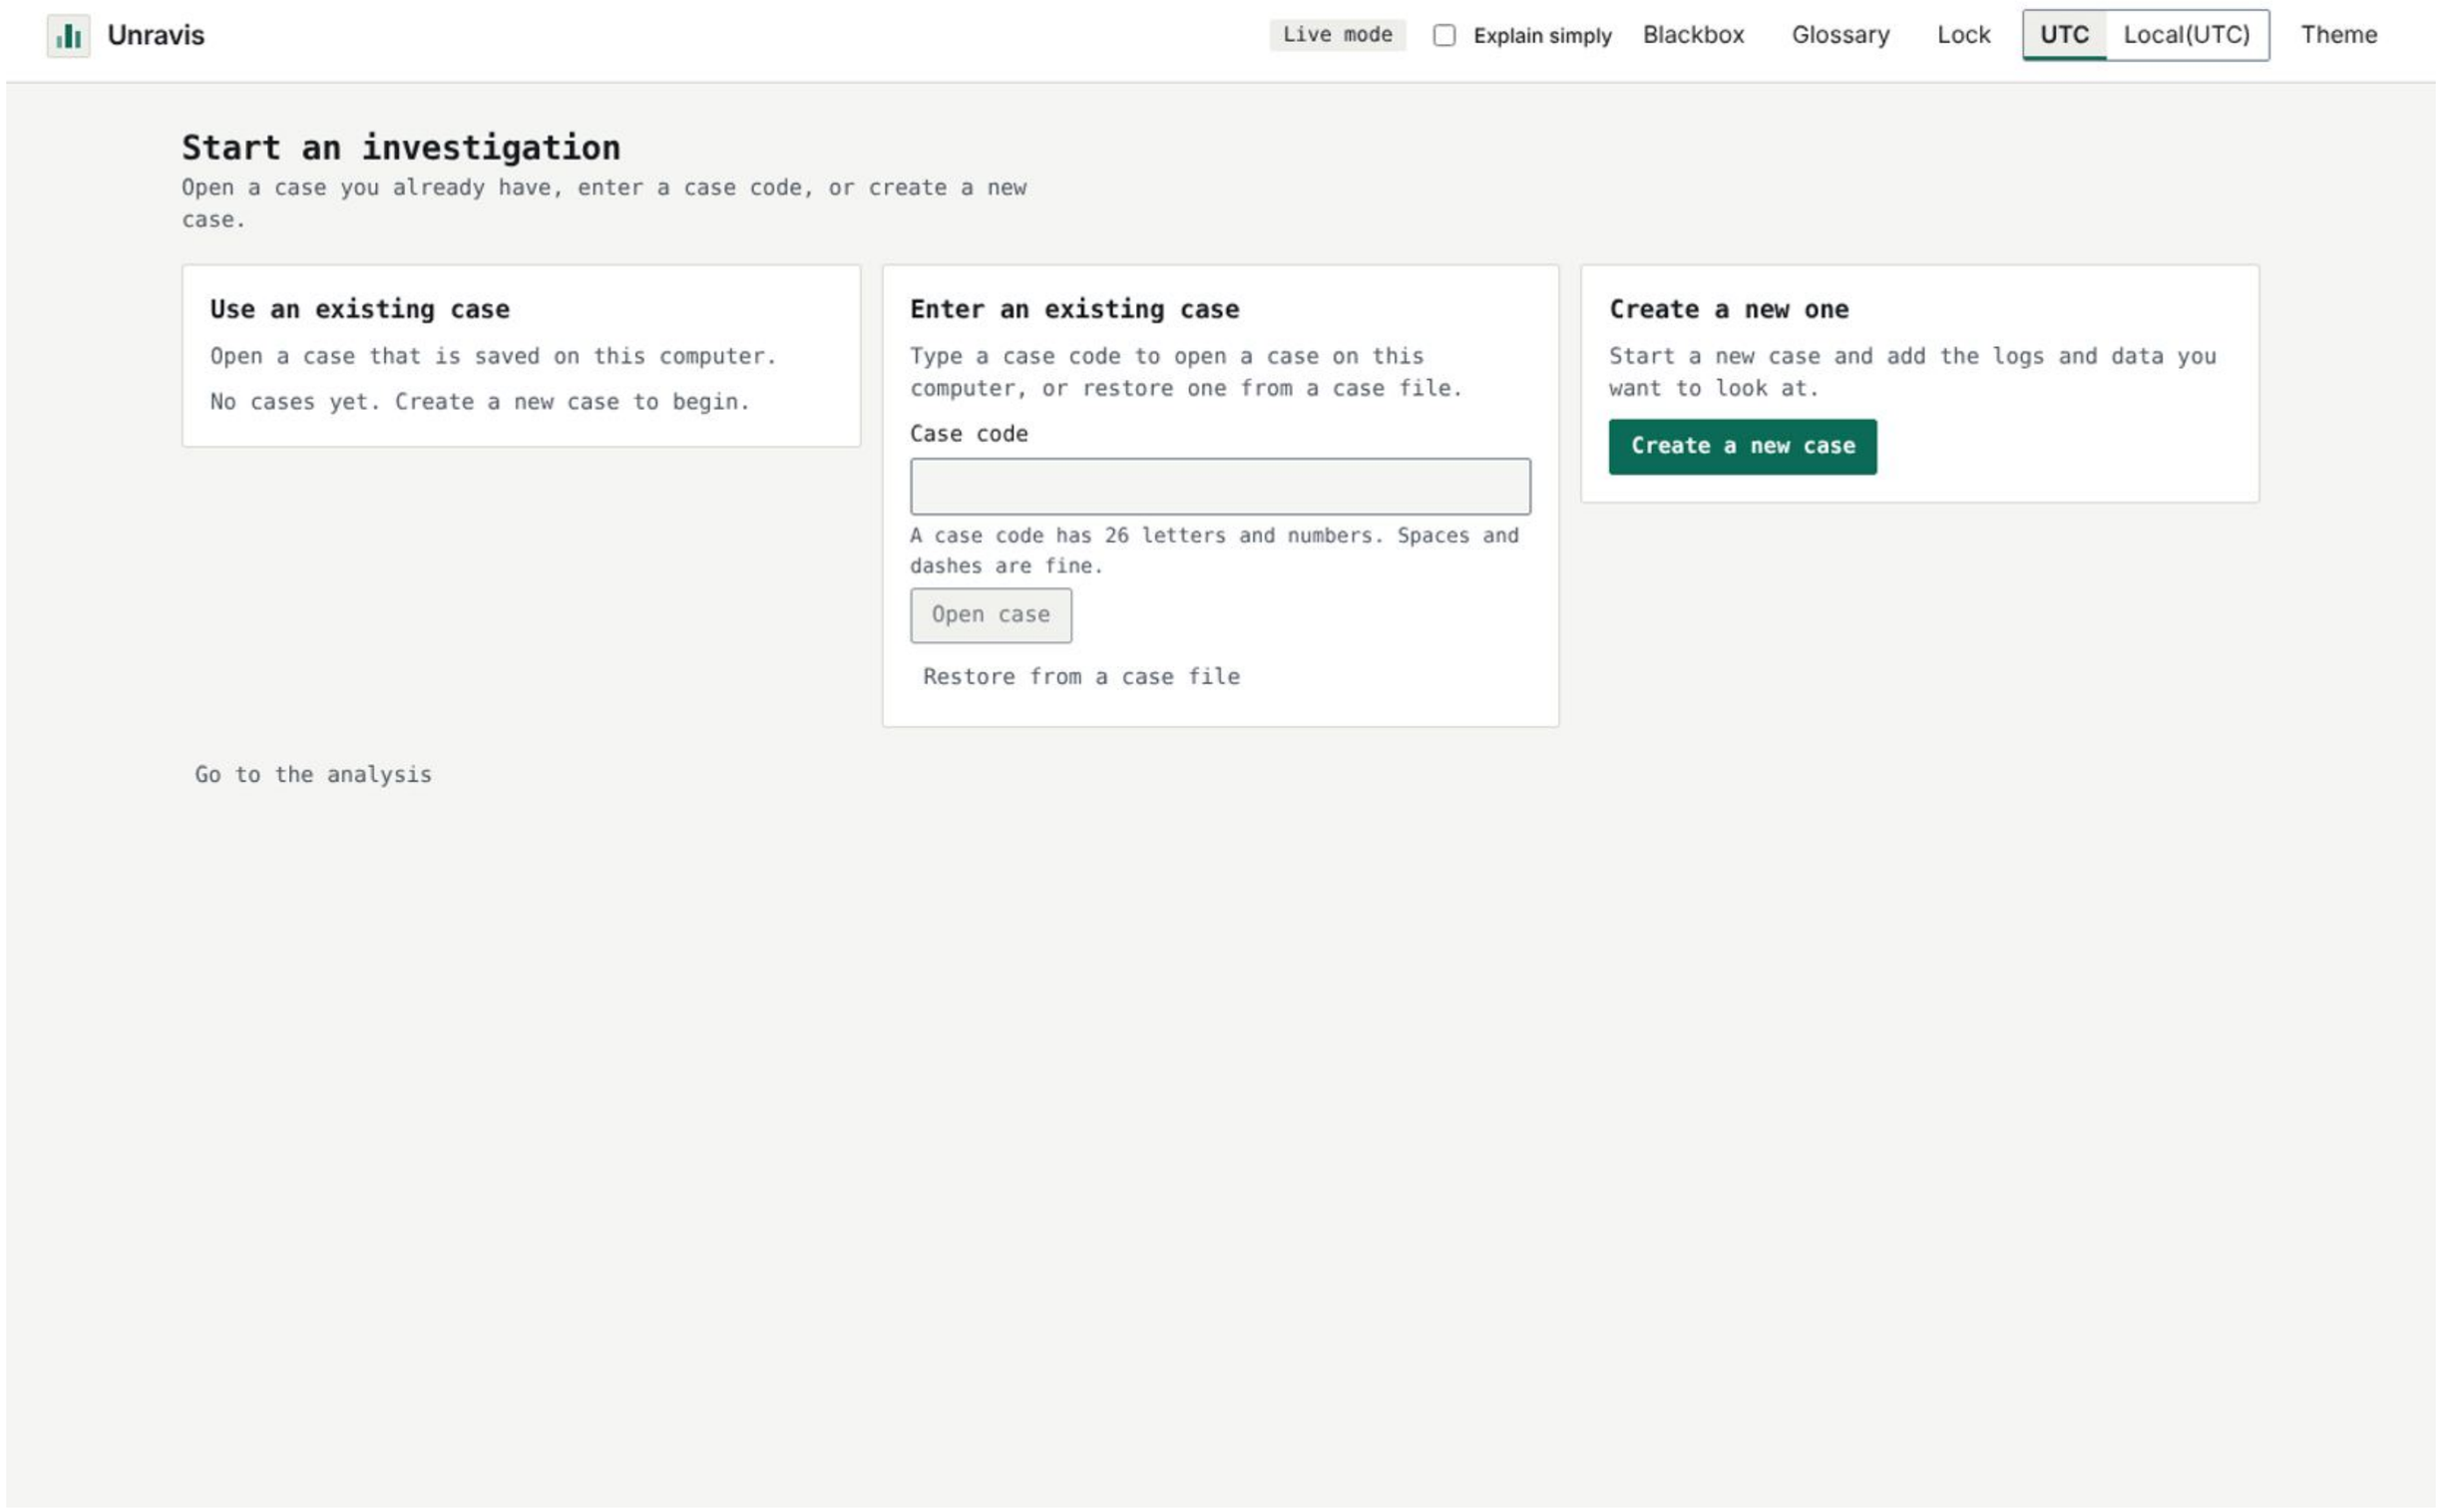

Image 025-start-list-fails.png

What it shows: The case list could not be loaded, with Try again.
How to reach it: Scenario s-fail (Case list fails to load, then works).

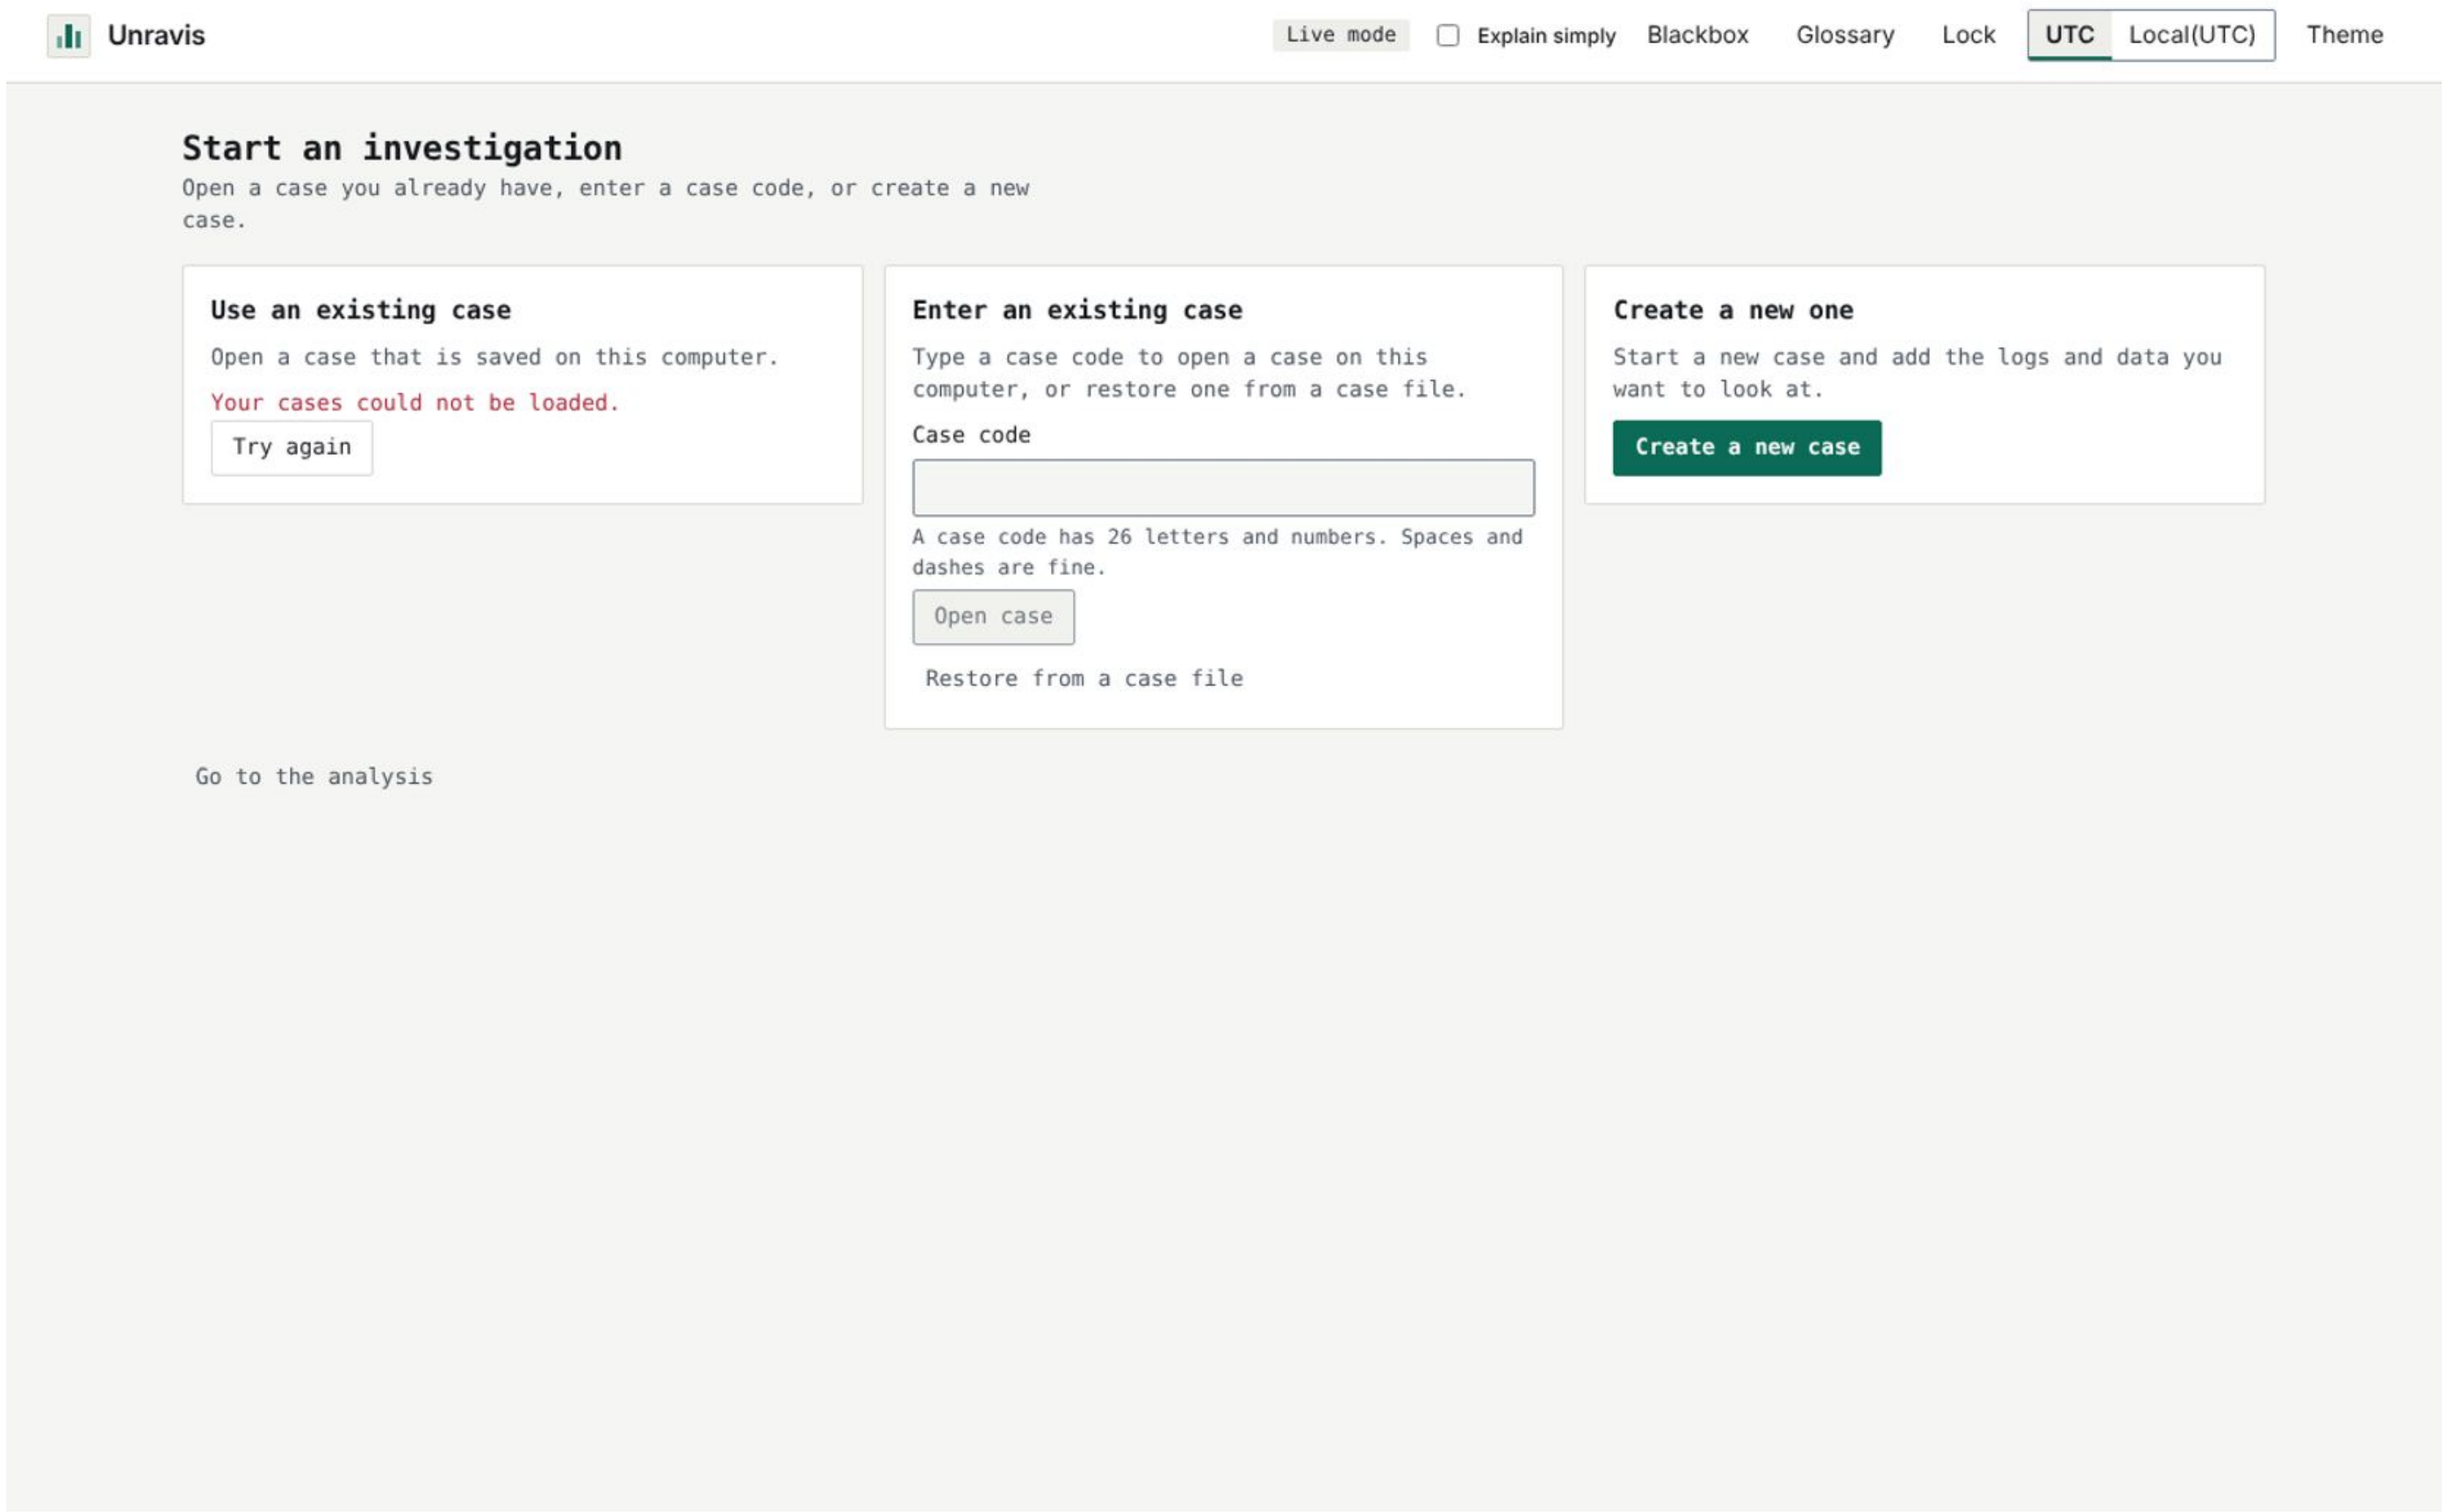

Image 026-start-list-after-retry.png

What it shows: Try again works the second time.
How to reach it: Press Try again.
