Image 183-export-preview-again.png

What it shows: Preview again after a 409.
How to reach it: Press Preview again.

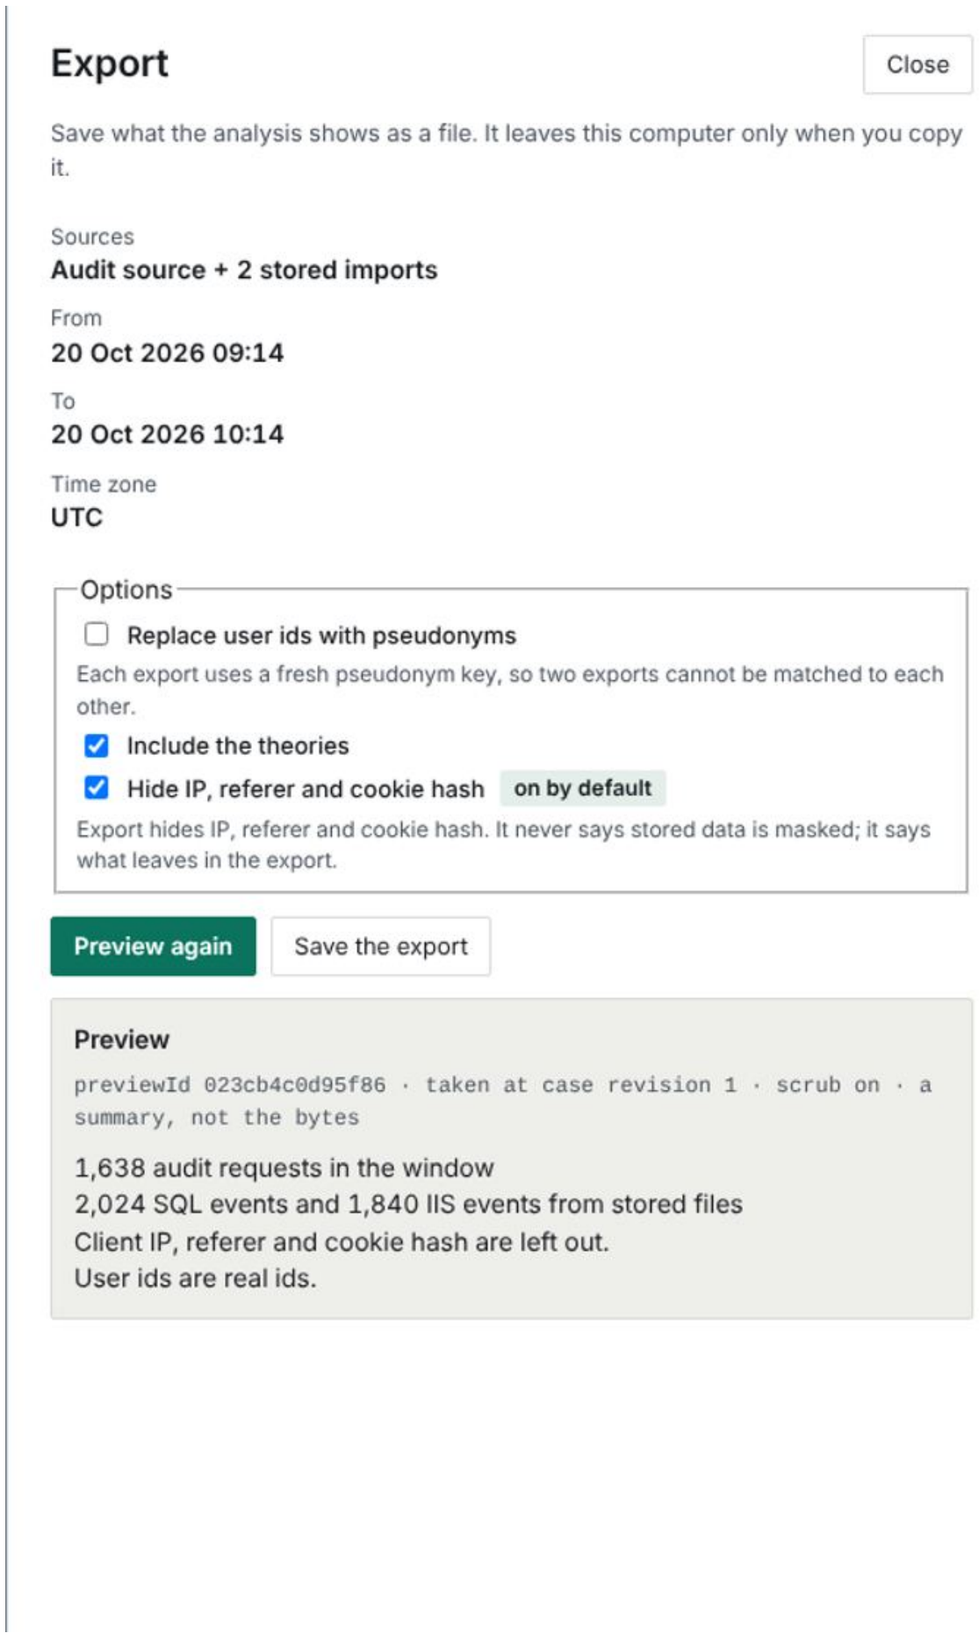

Image 184-export-scrub-switched-409.png

What it shows: Scrub switched after the preview also gives 409.
How to reach it: Scenario x-scrub, press Save the export.

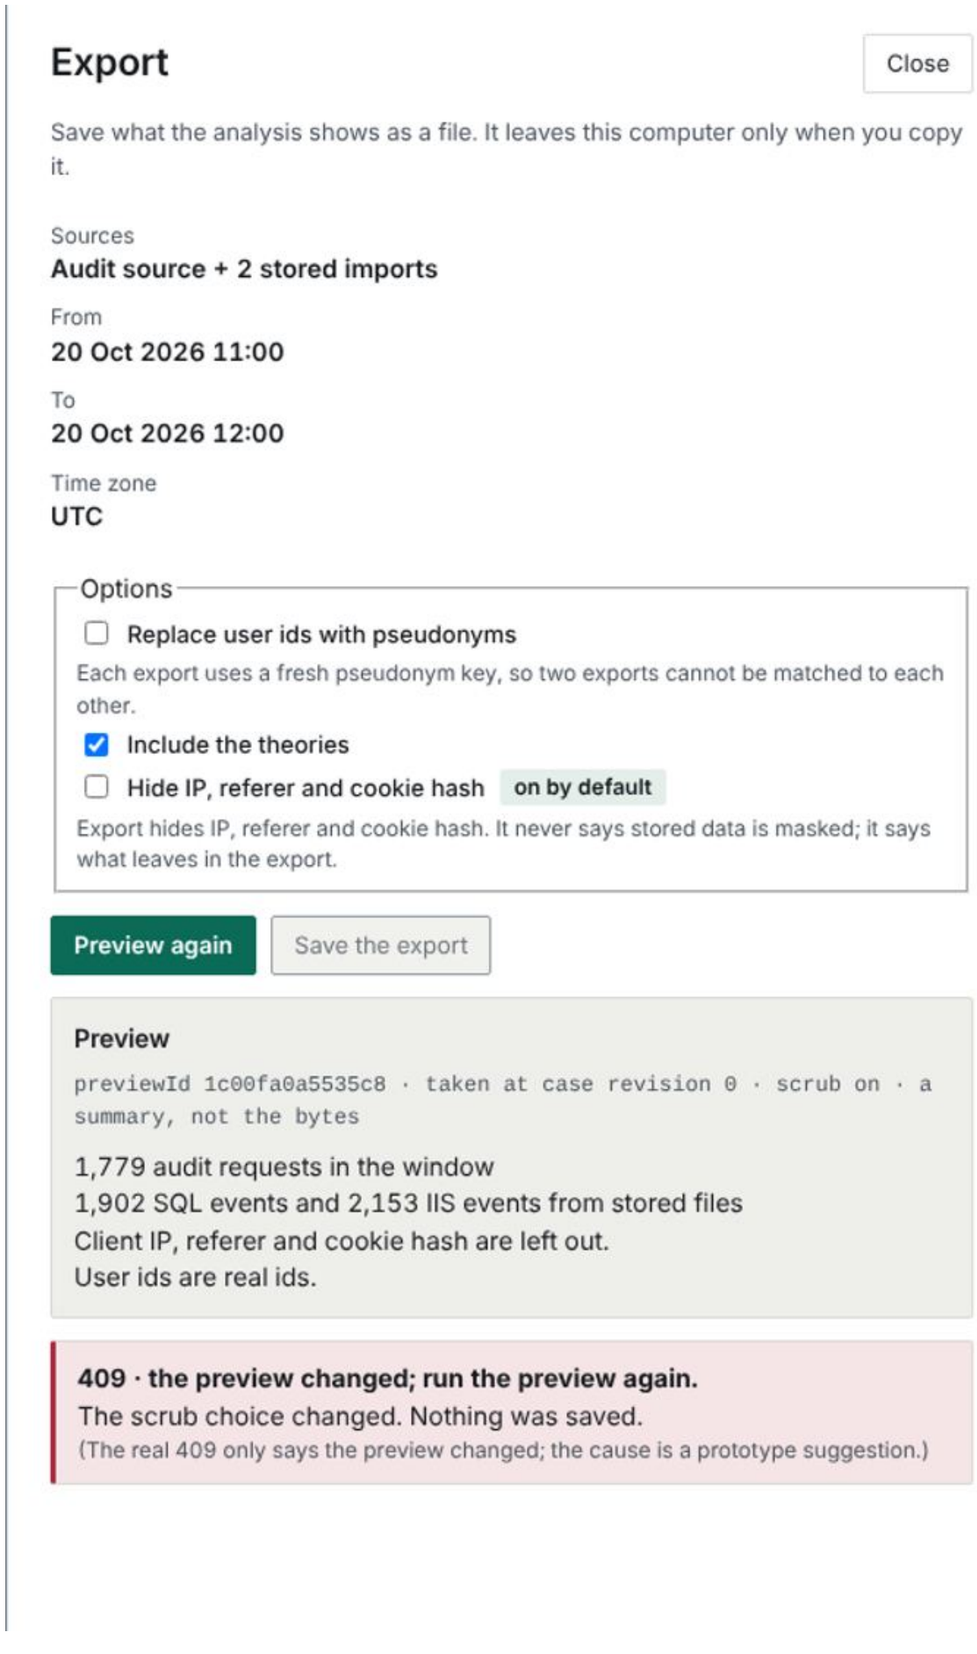

Image 185-timeline-opens-by-itself-loading.png

What it shows: The timeline opens by itself: the chart is drawn and the Suspects rail starts checking one suspect at a time.
How to reach it: Case home > Open the Investigation Timeline (captured a moment after the click).

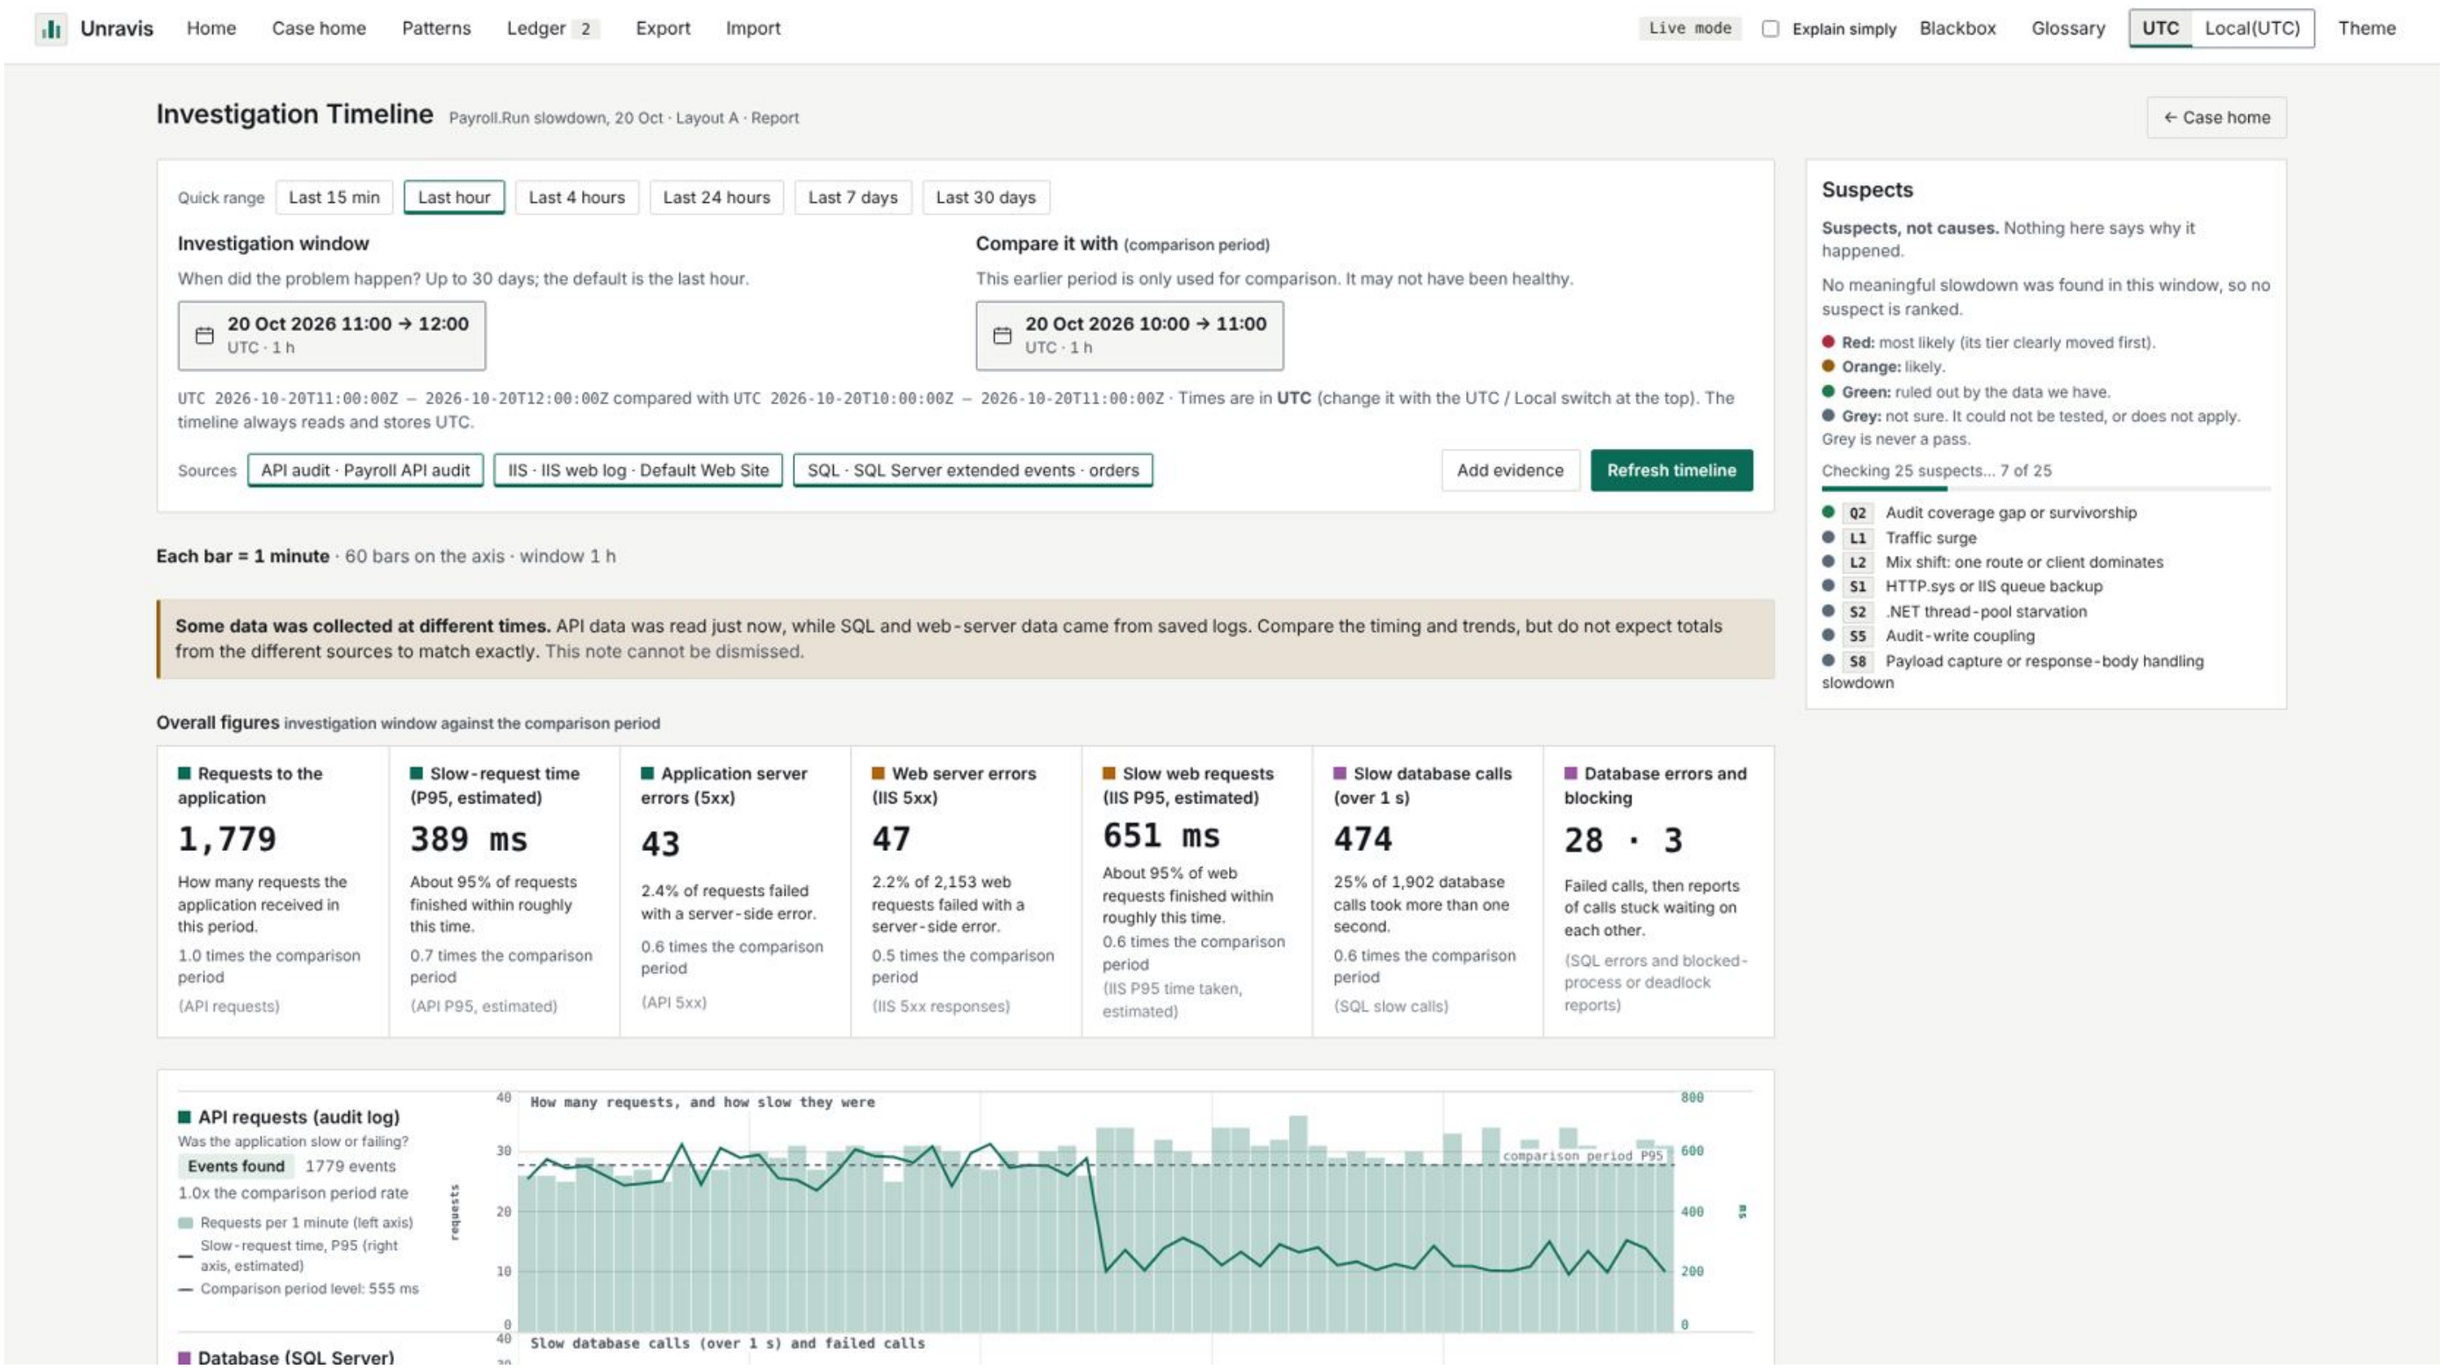

Image 186-timeline-default-last-hour-full.png

What it shows: The whole screen with the default window: last hour against the hour before, all three lanes, the rail finished.
How to reach it: Wait a few seconds after opening; nothing else pressed.

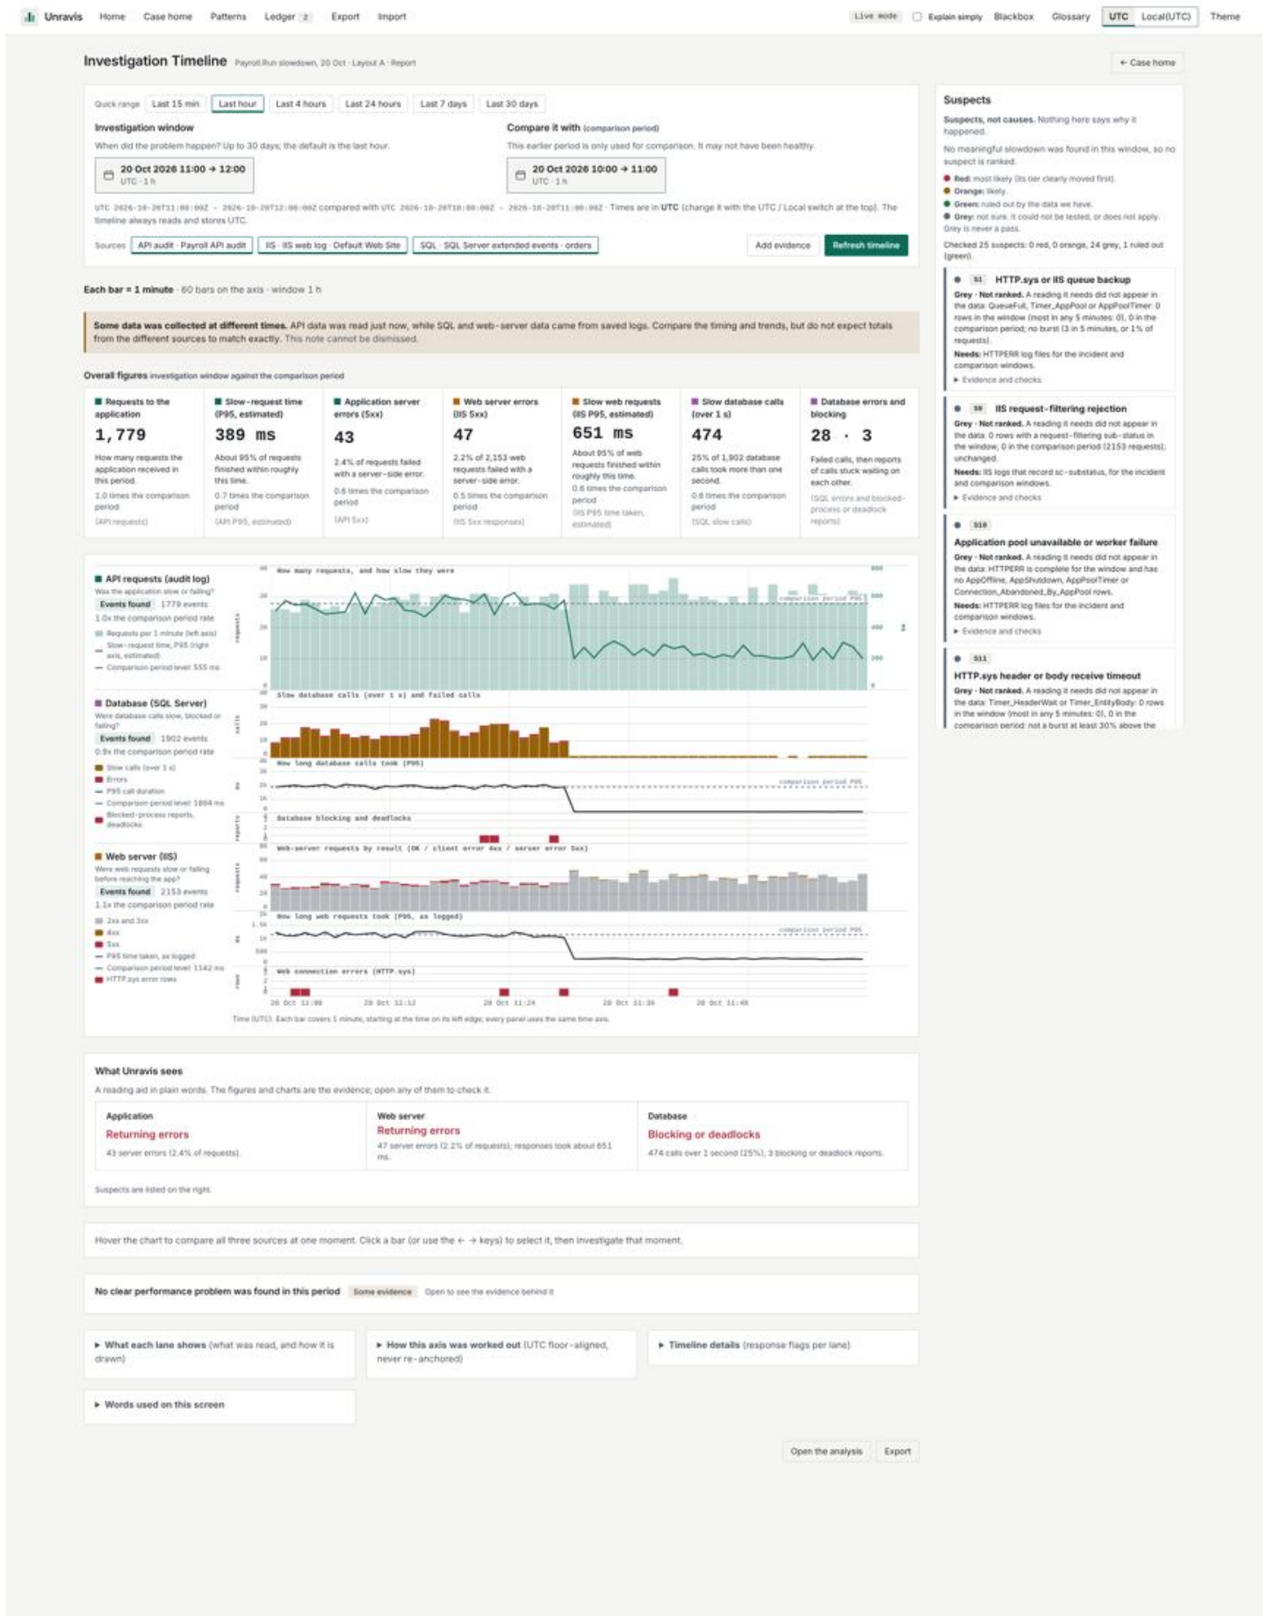

Image 187-timeline-controls-card.png

What it shows: The controls card: quick ranges, Investigation window, Compare it with, Sources chips, Add evidence, Refresh timeline.
How to reach it: Timeline, top.

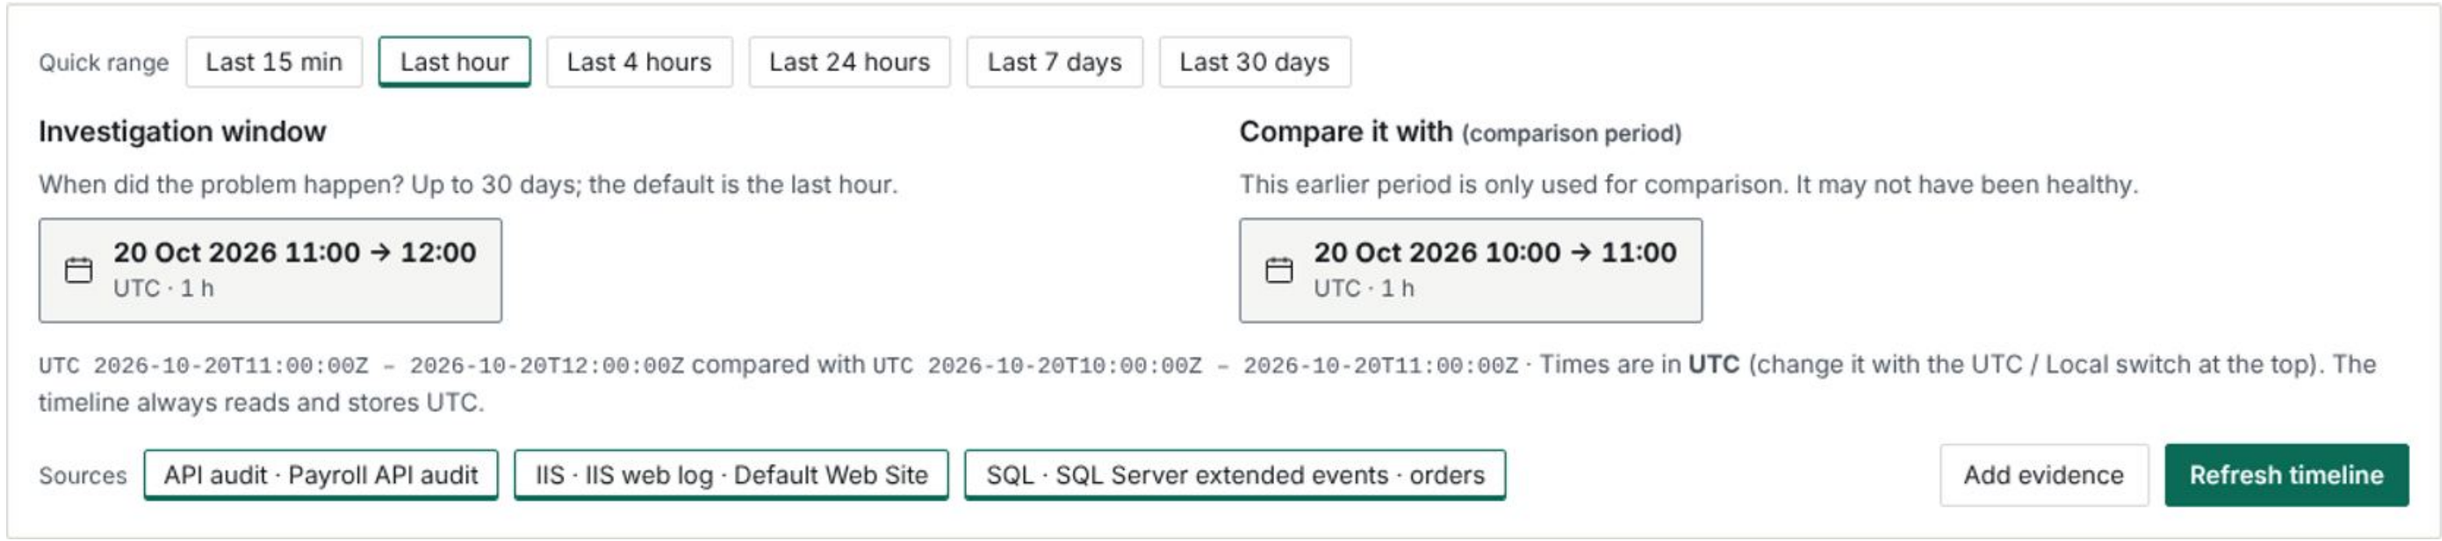

Image 188-timeline-quick-range-4-hours.png

What it shows: A quick range chip sets the window to that period ending now and the comparison period to the equal period right before.
How to reach it: Press Last 4 hours.

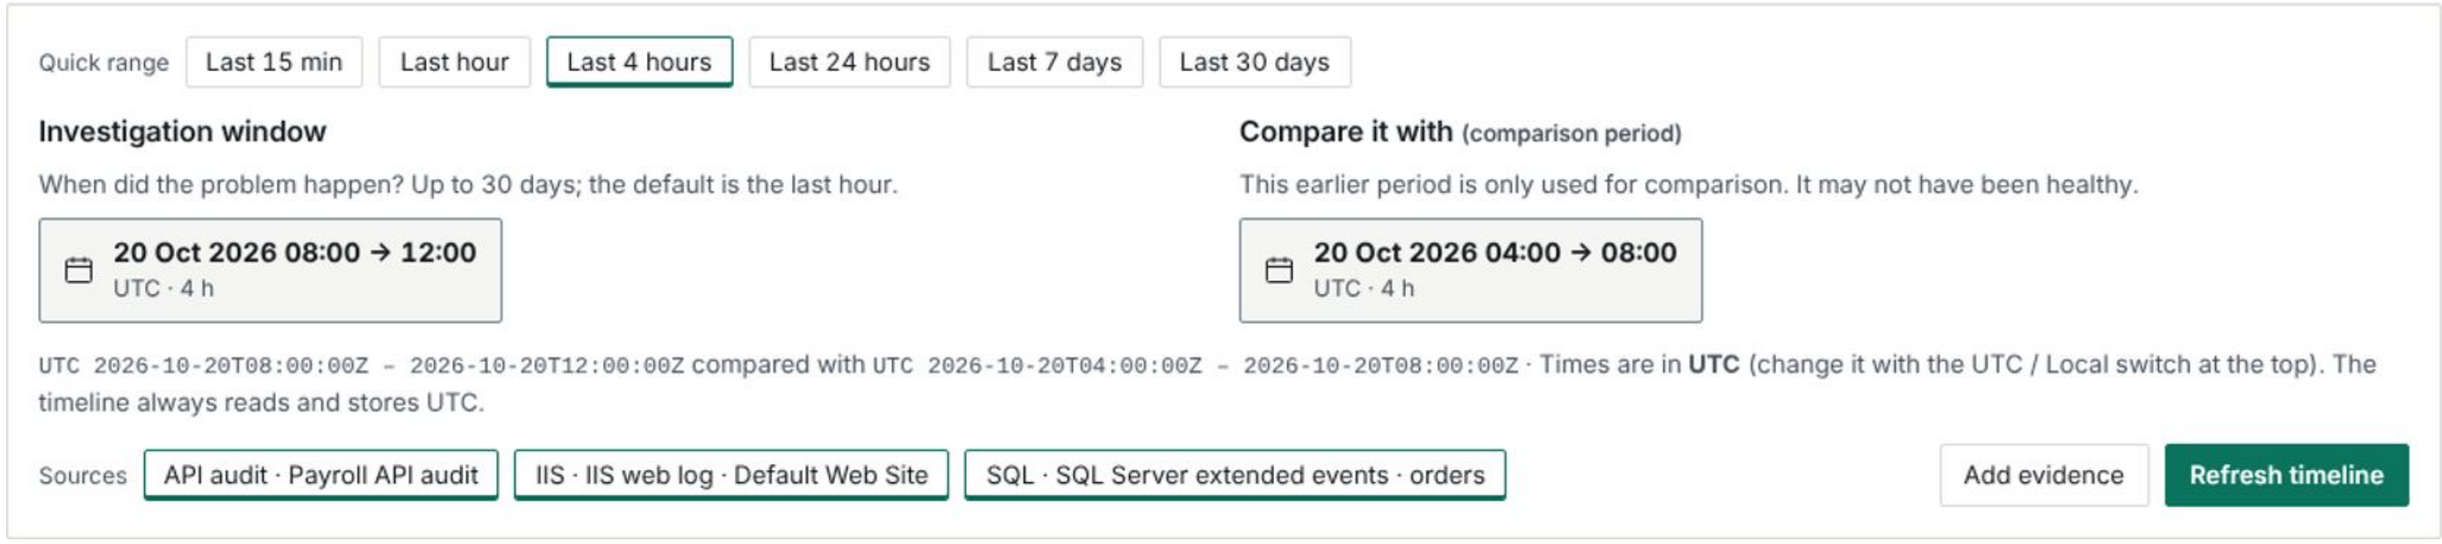

Image 189-timeline-picker-investigation-window.png

What it shows: The Investigation window picker: quick ranges, calendar, start and end times in the chosen zone, Apply and Cancel.
How to reach it: Press the Investigation window button.

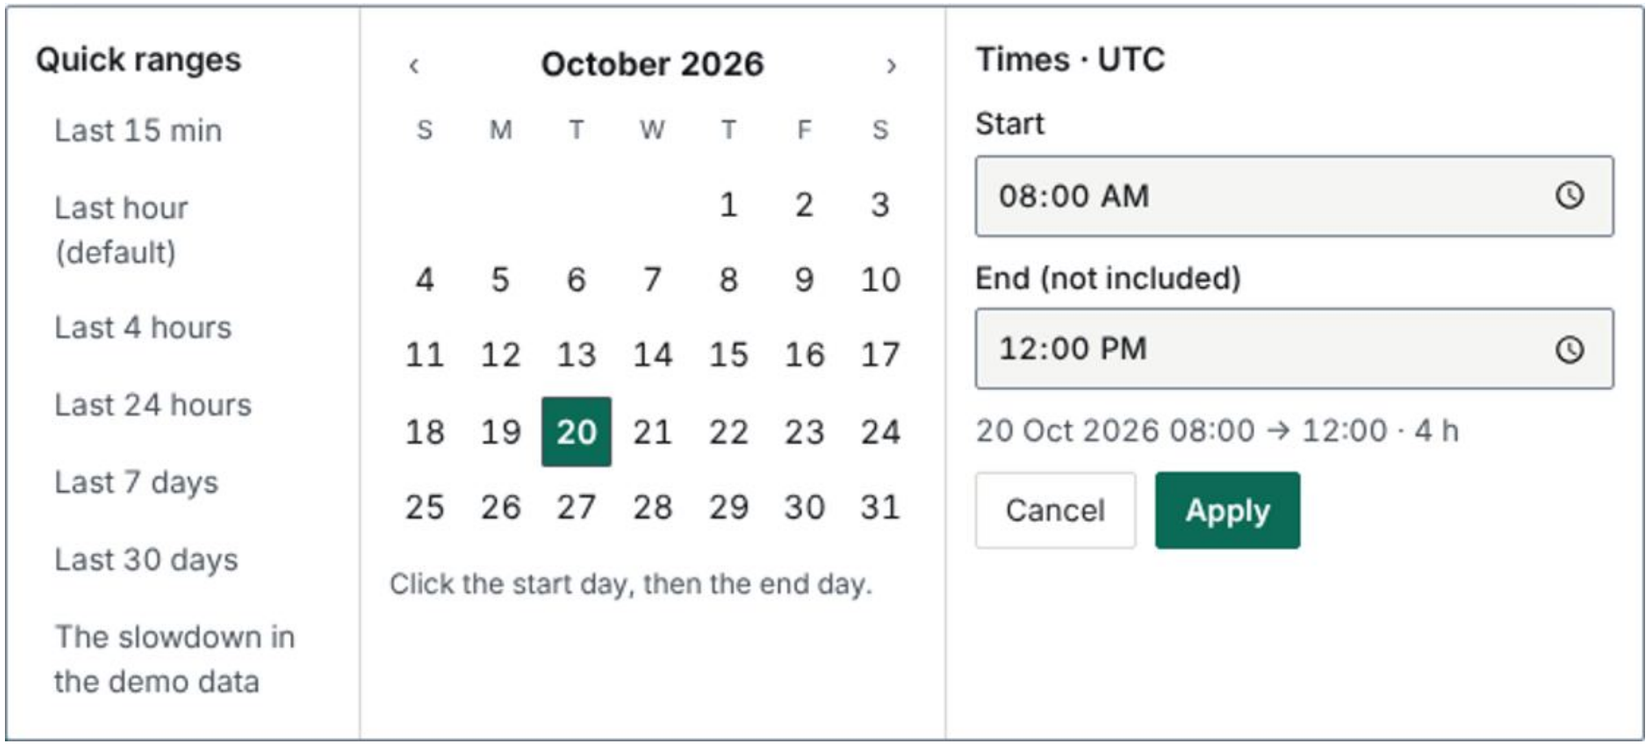

Image 190-timeline-picker-applied.png

What it shows: After choosing "The slowdown in the demo data": the window reads 09:00 to 12:00 UTC.
How to reach it: In the picker press The slowdown in the demo data.

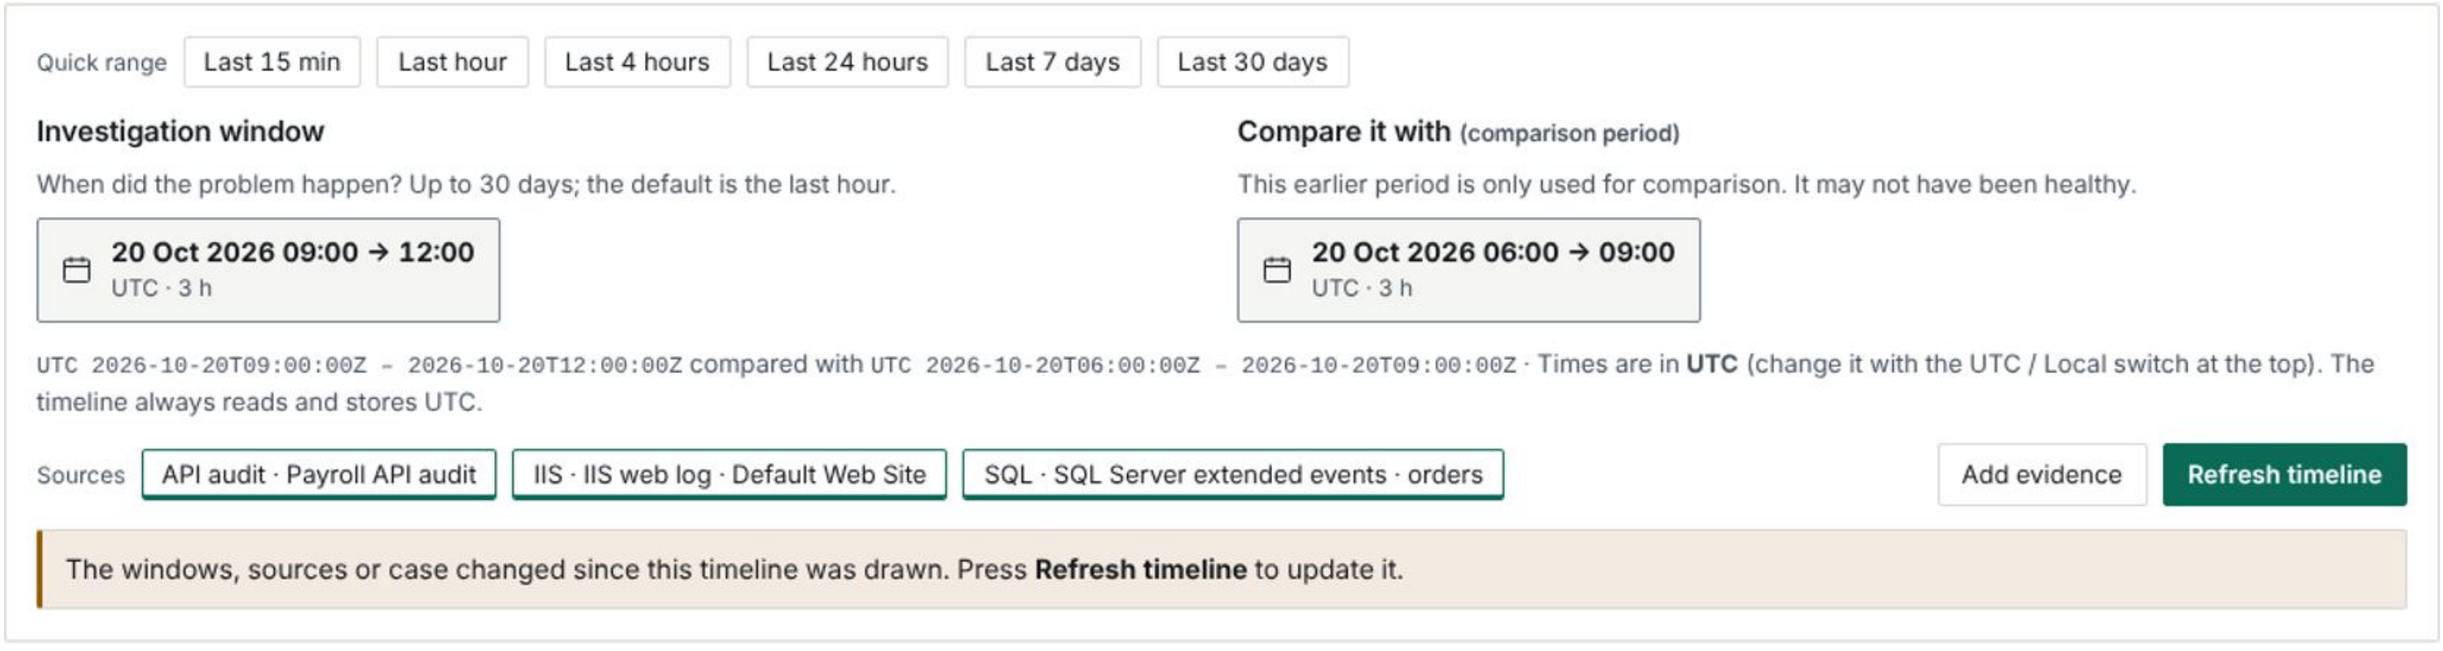

Image 191-timeline-picker-comparison-period.png

What it shows: The Compare it with picker: The equal period right before the incident, Same time yesterday.
How to reach it: Press the comparison period button.

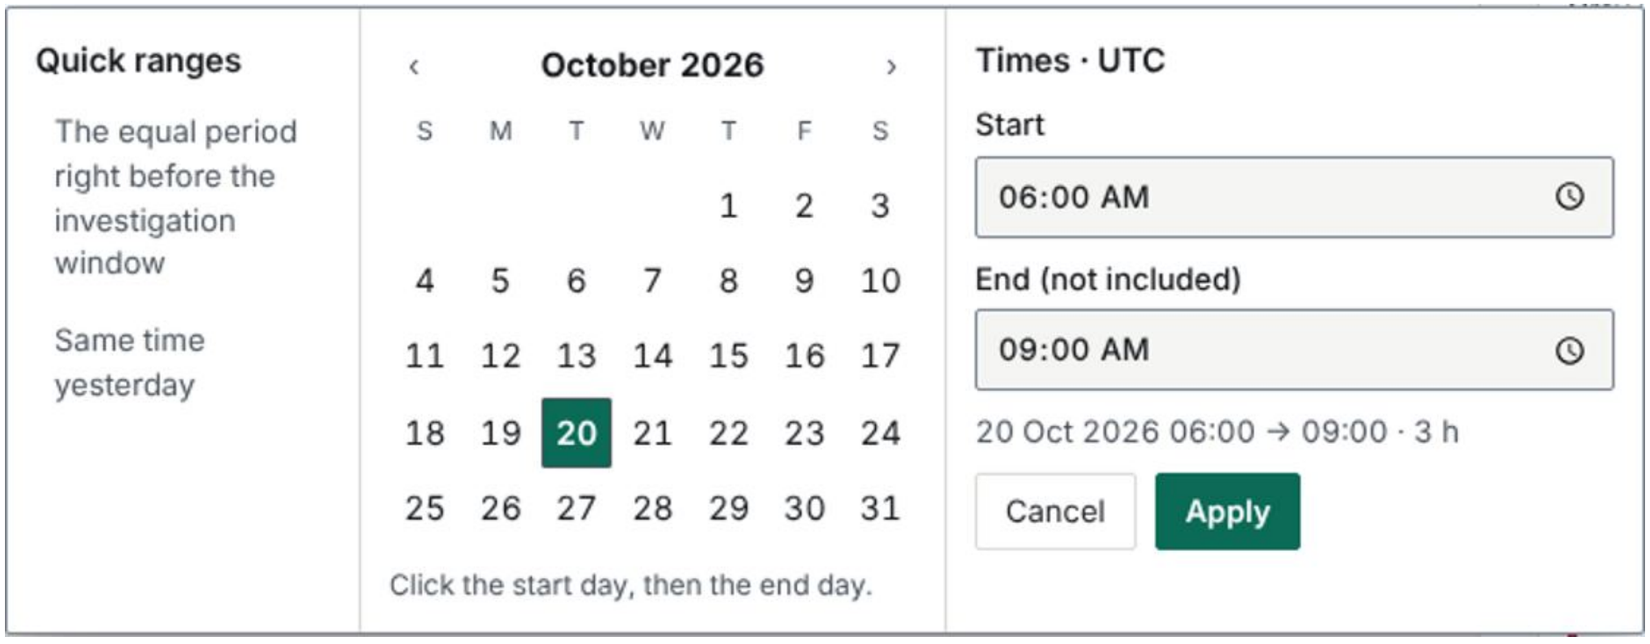

Image 192-timeline-picker-closed-by-outside-click.png

What it shows: A click outside the picker closes it without changing anything.
How to reach it: Click anywhere outside the picker.

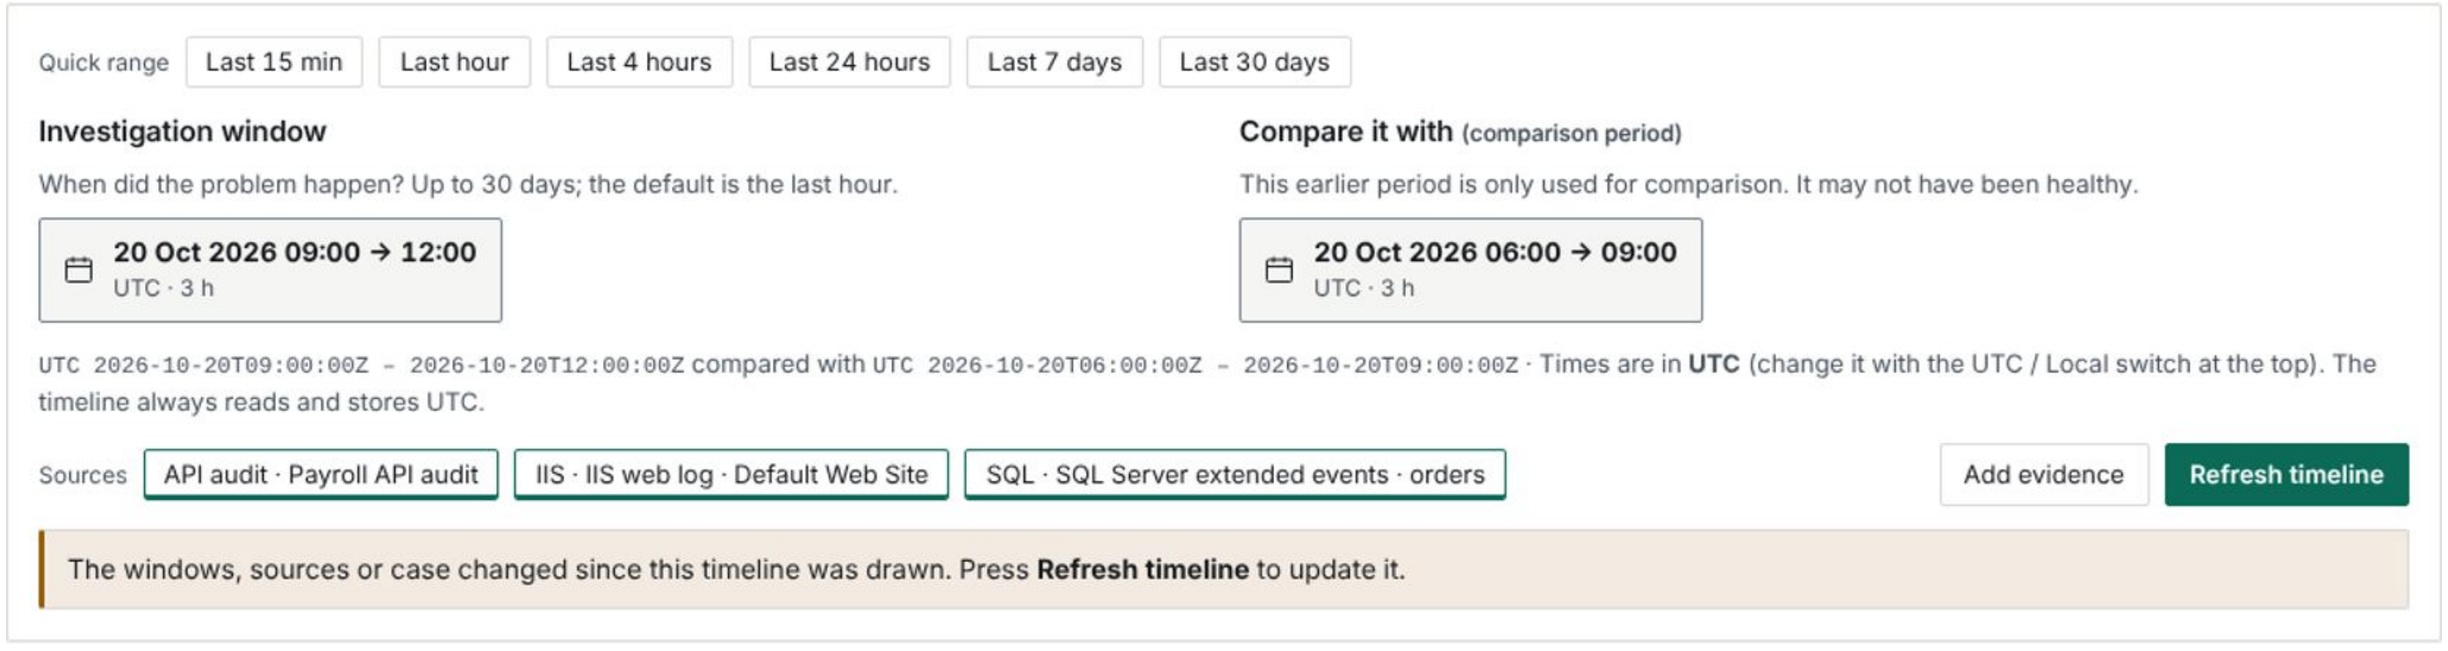

Image 193-timeline-sources-chip-off.png

What it shows: Sources chips: switching IIS off leaves two lanes to draw.
How to reach it: Press the IIS chip, then Refresh timeline.

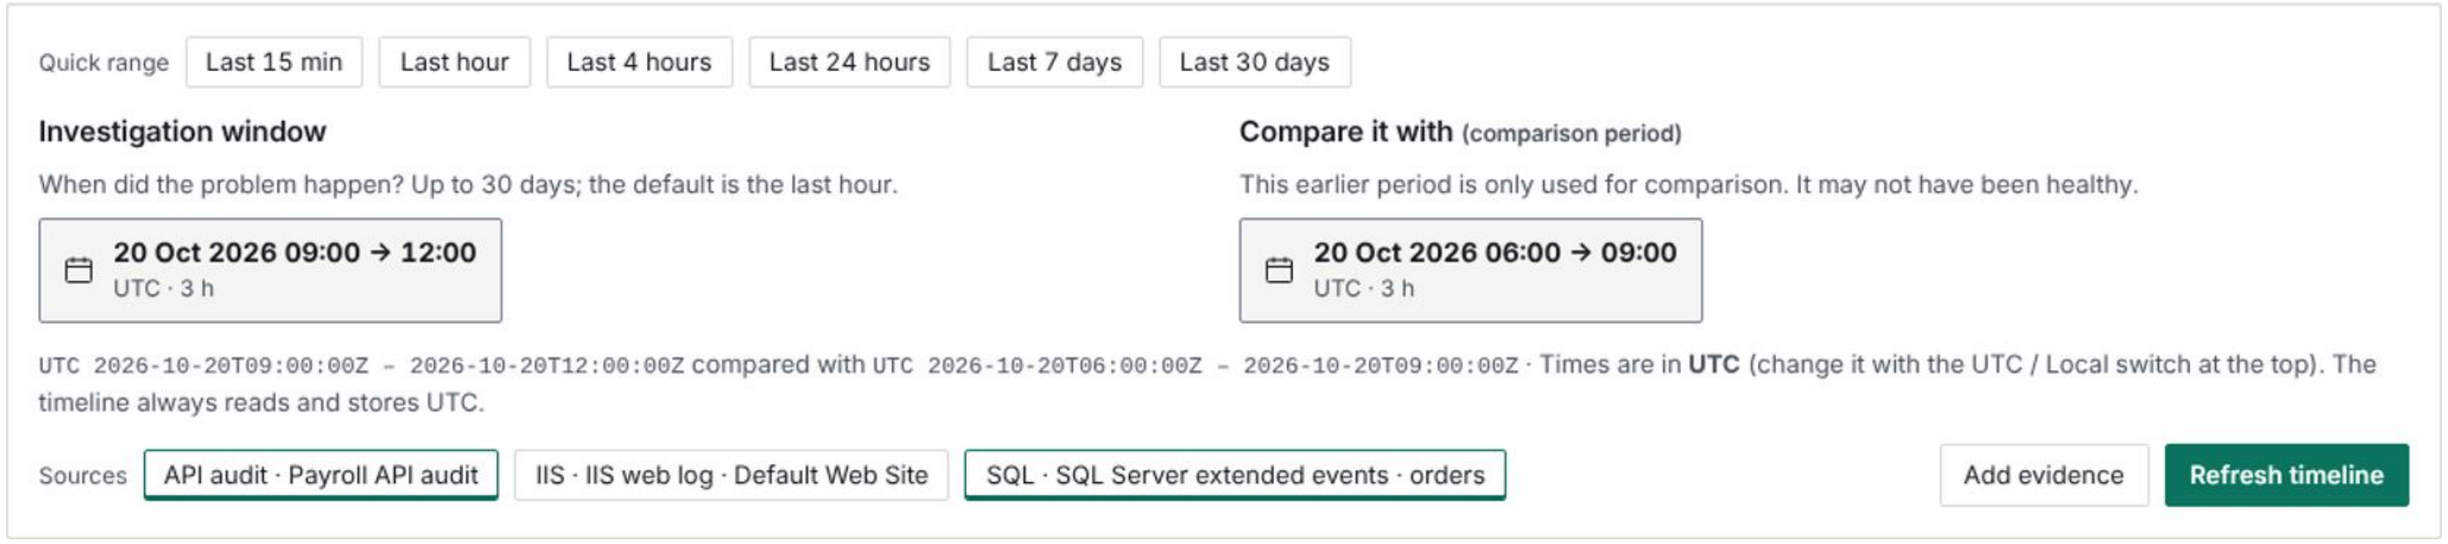

Image 194-timeline-refresh-timeline.png

What it shows: Refresh timeline re-reads and redraws after the windows or sources changed.
How to reach it: Press Refresh timeline.

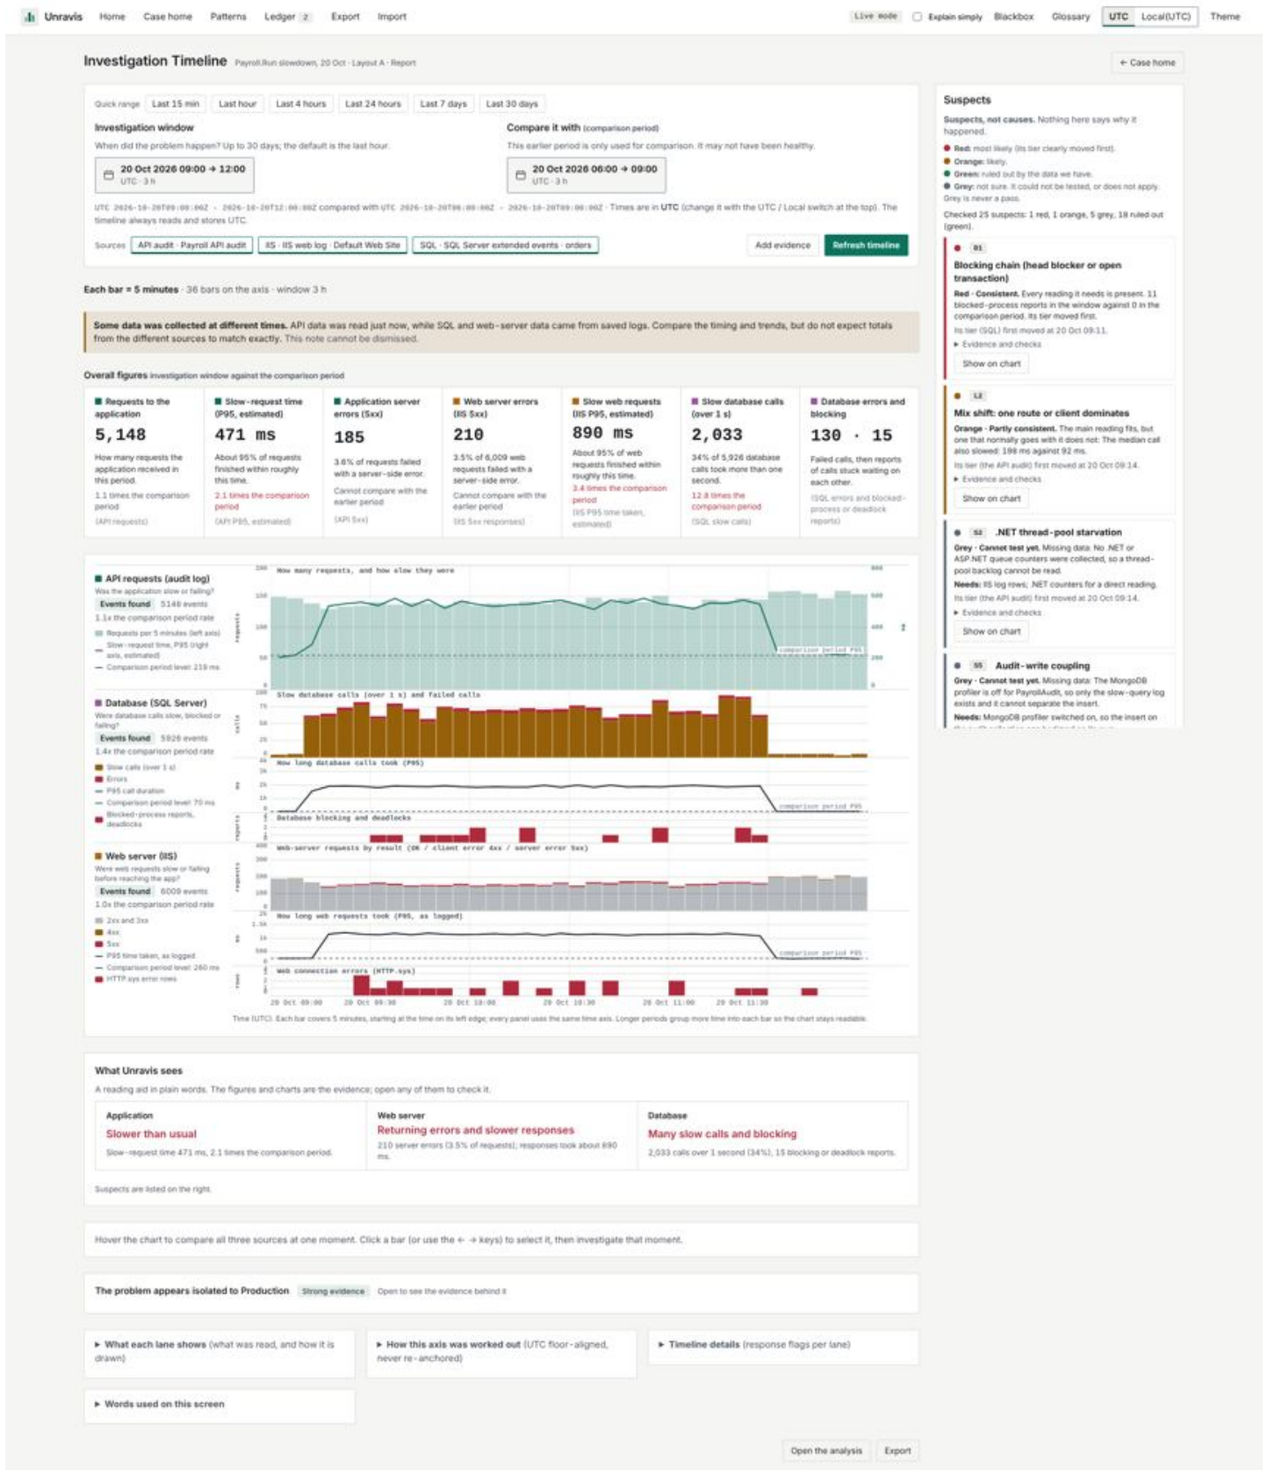

Image 195-timeline-slowdown-full.png

What it shows: The slowdown with a real comparison (09:00 to 11:30 against the 2.5 hours before): the whole screen.
How to reach it: Scenario t-slow (The slowdown, with a real comparison).

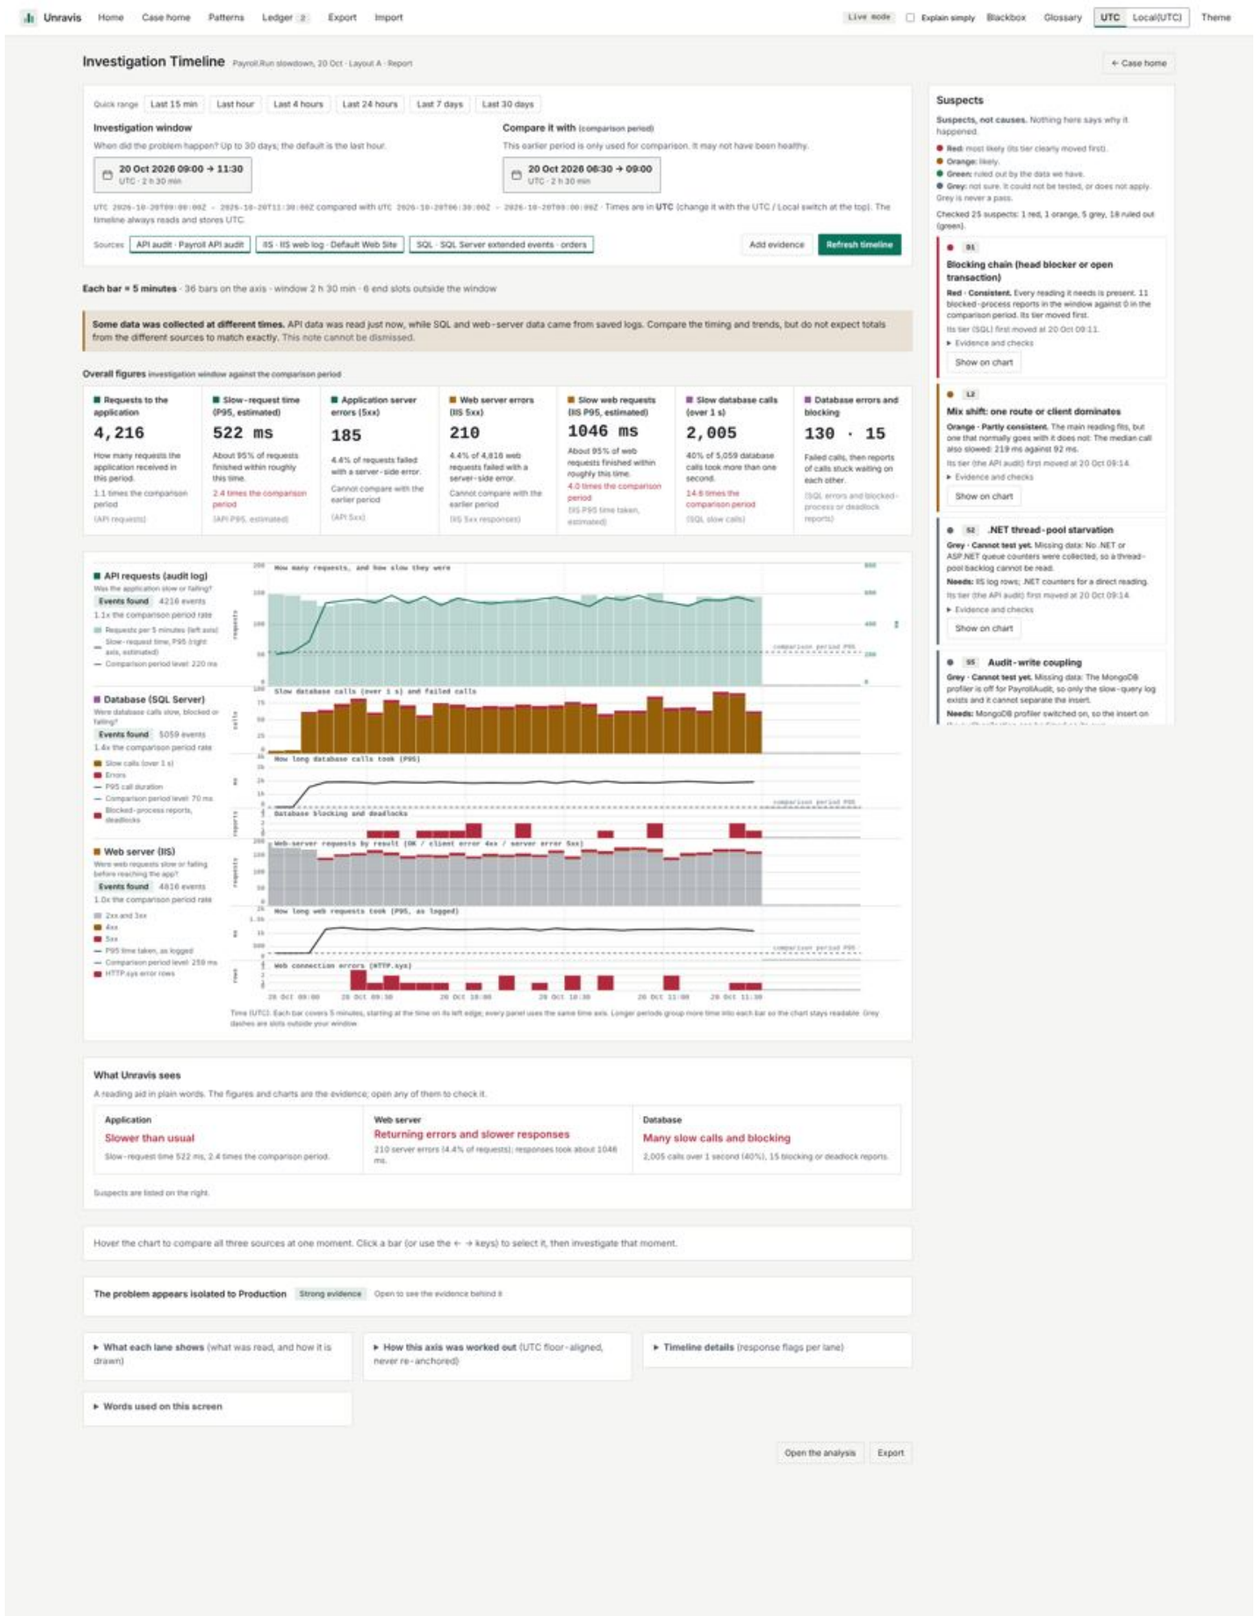

Image 196-timeline-summary-line-and-mixed-note.png

What it shows: The summary line (bar size, bars on the axis, window) and the mixed-time note that cannot be dismissed.
How to reach it: Timeline, under the controls.

Image 197-timeline-figure-cards.png

What it shows: The seven overall figure cards: requests, P95, 5xx, IIS 5xx, IIS P95, slow SQL calls, errors and blocking.
How to reach it: Timeline, above the charts.

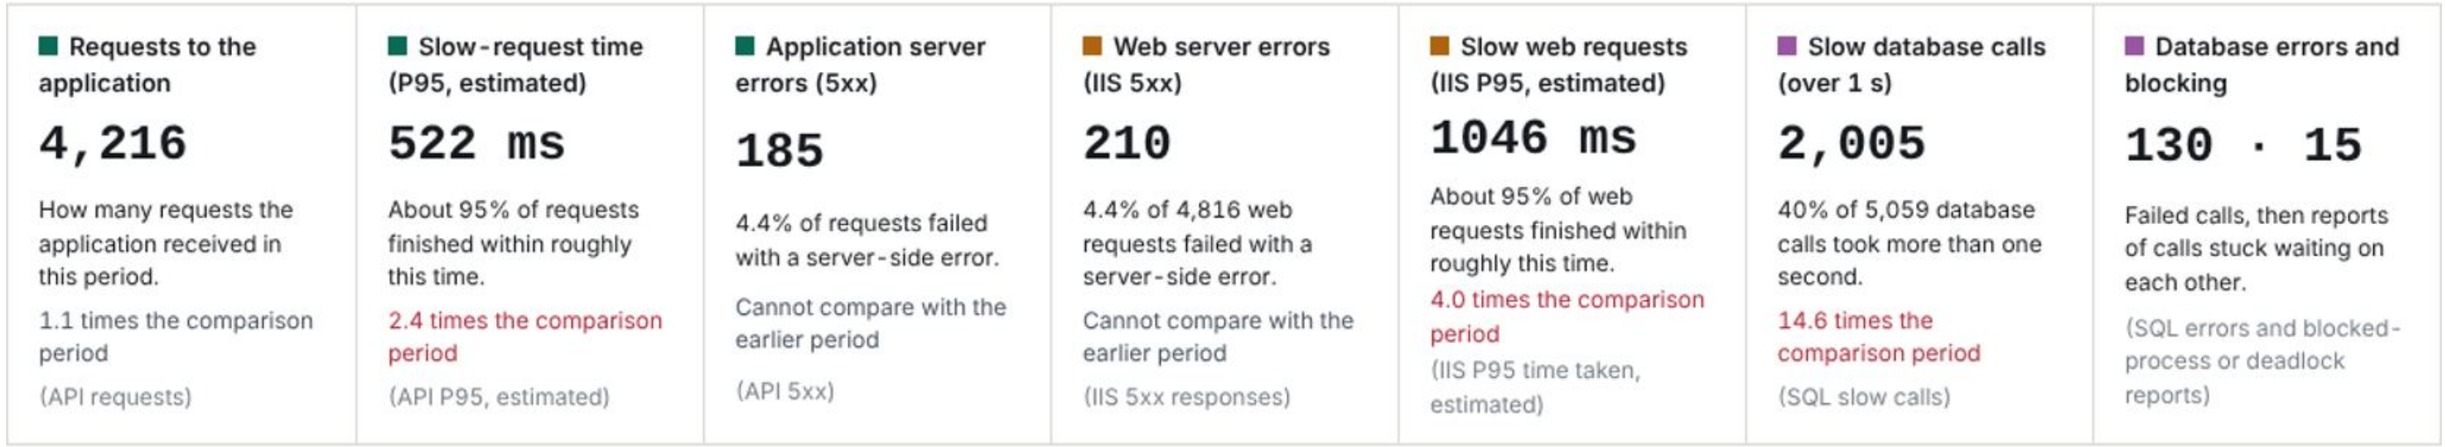

Image 198-timeline-what-unravis-sees.png

What it shows: The reading aid: Application, Web server, Database tiles in plain words.
How to reach it: Timeline, under the chart.

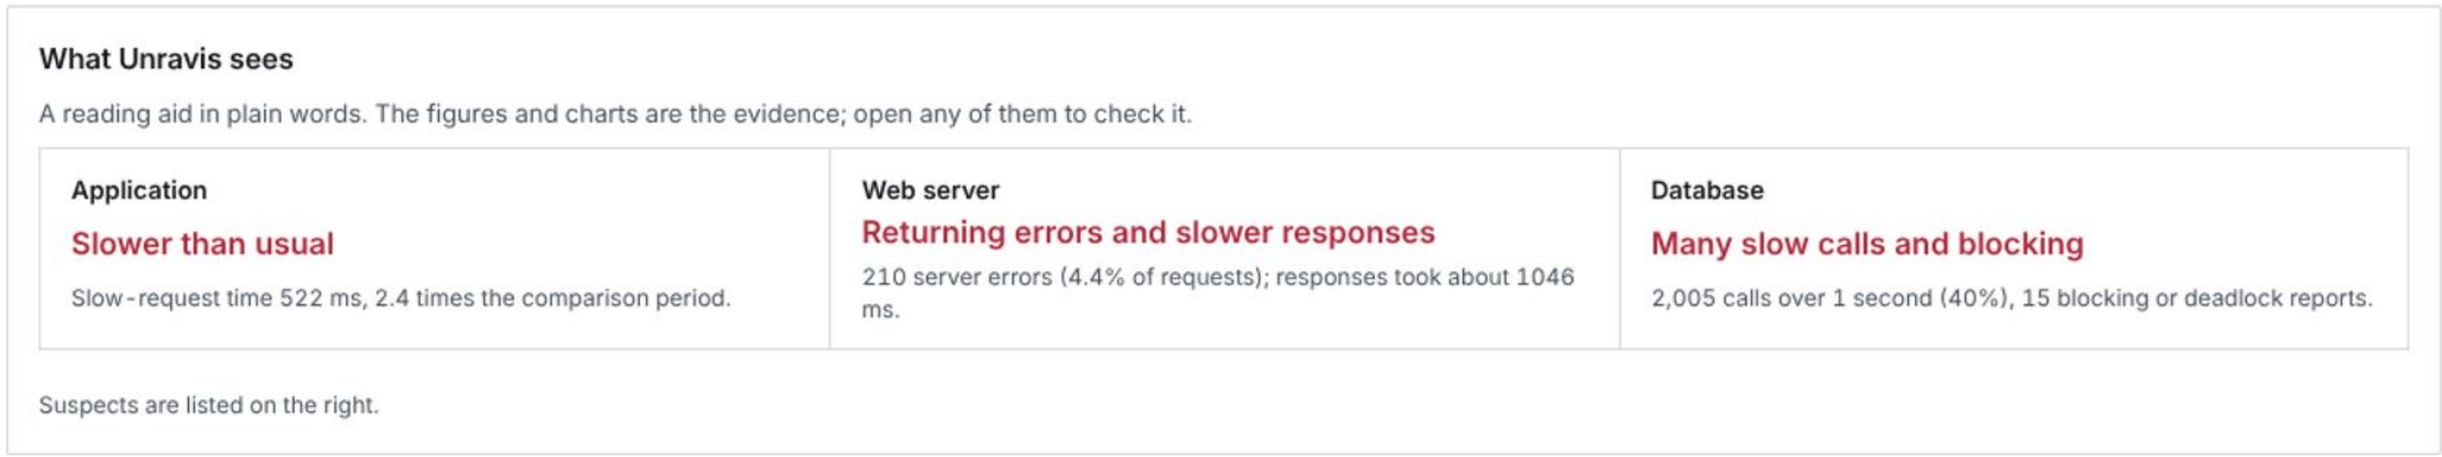

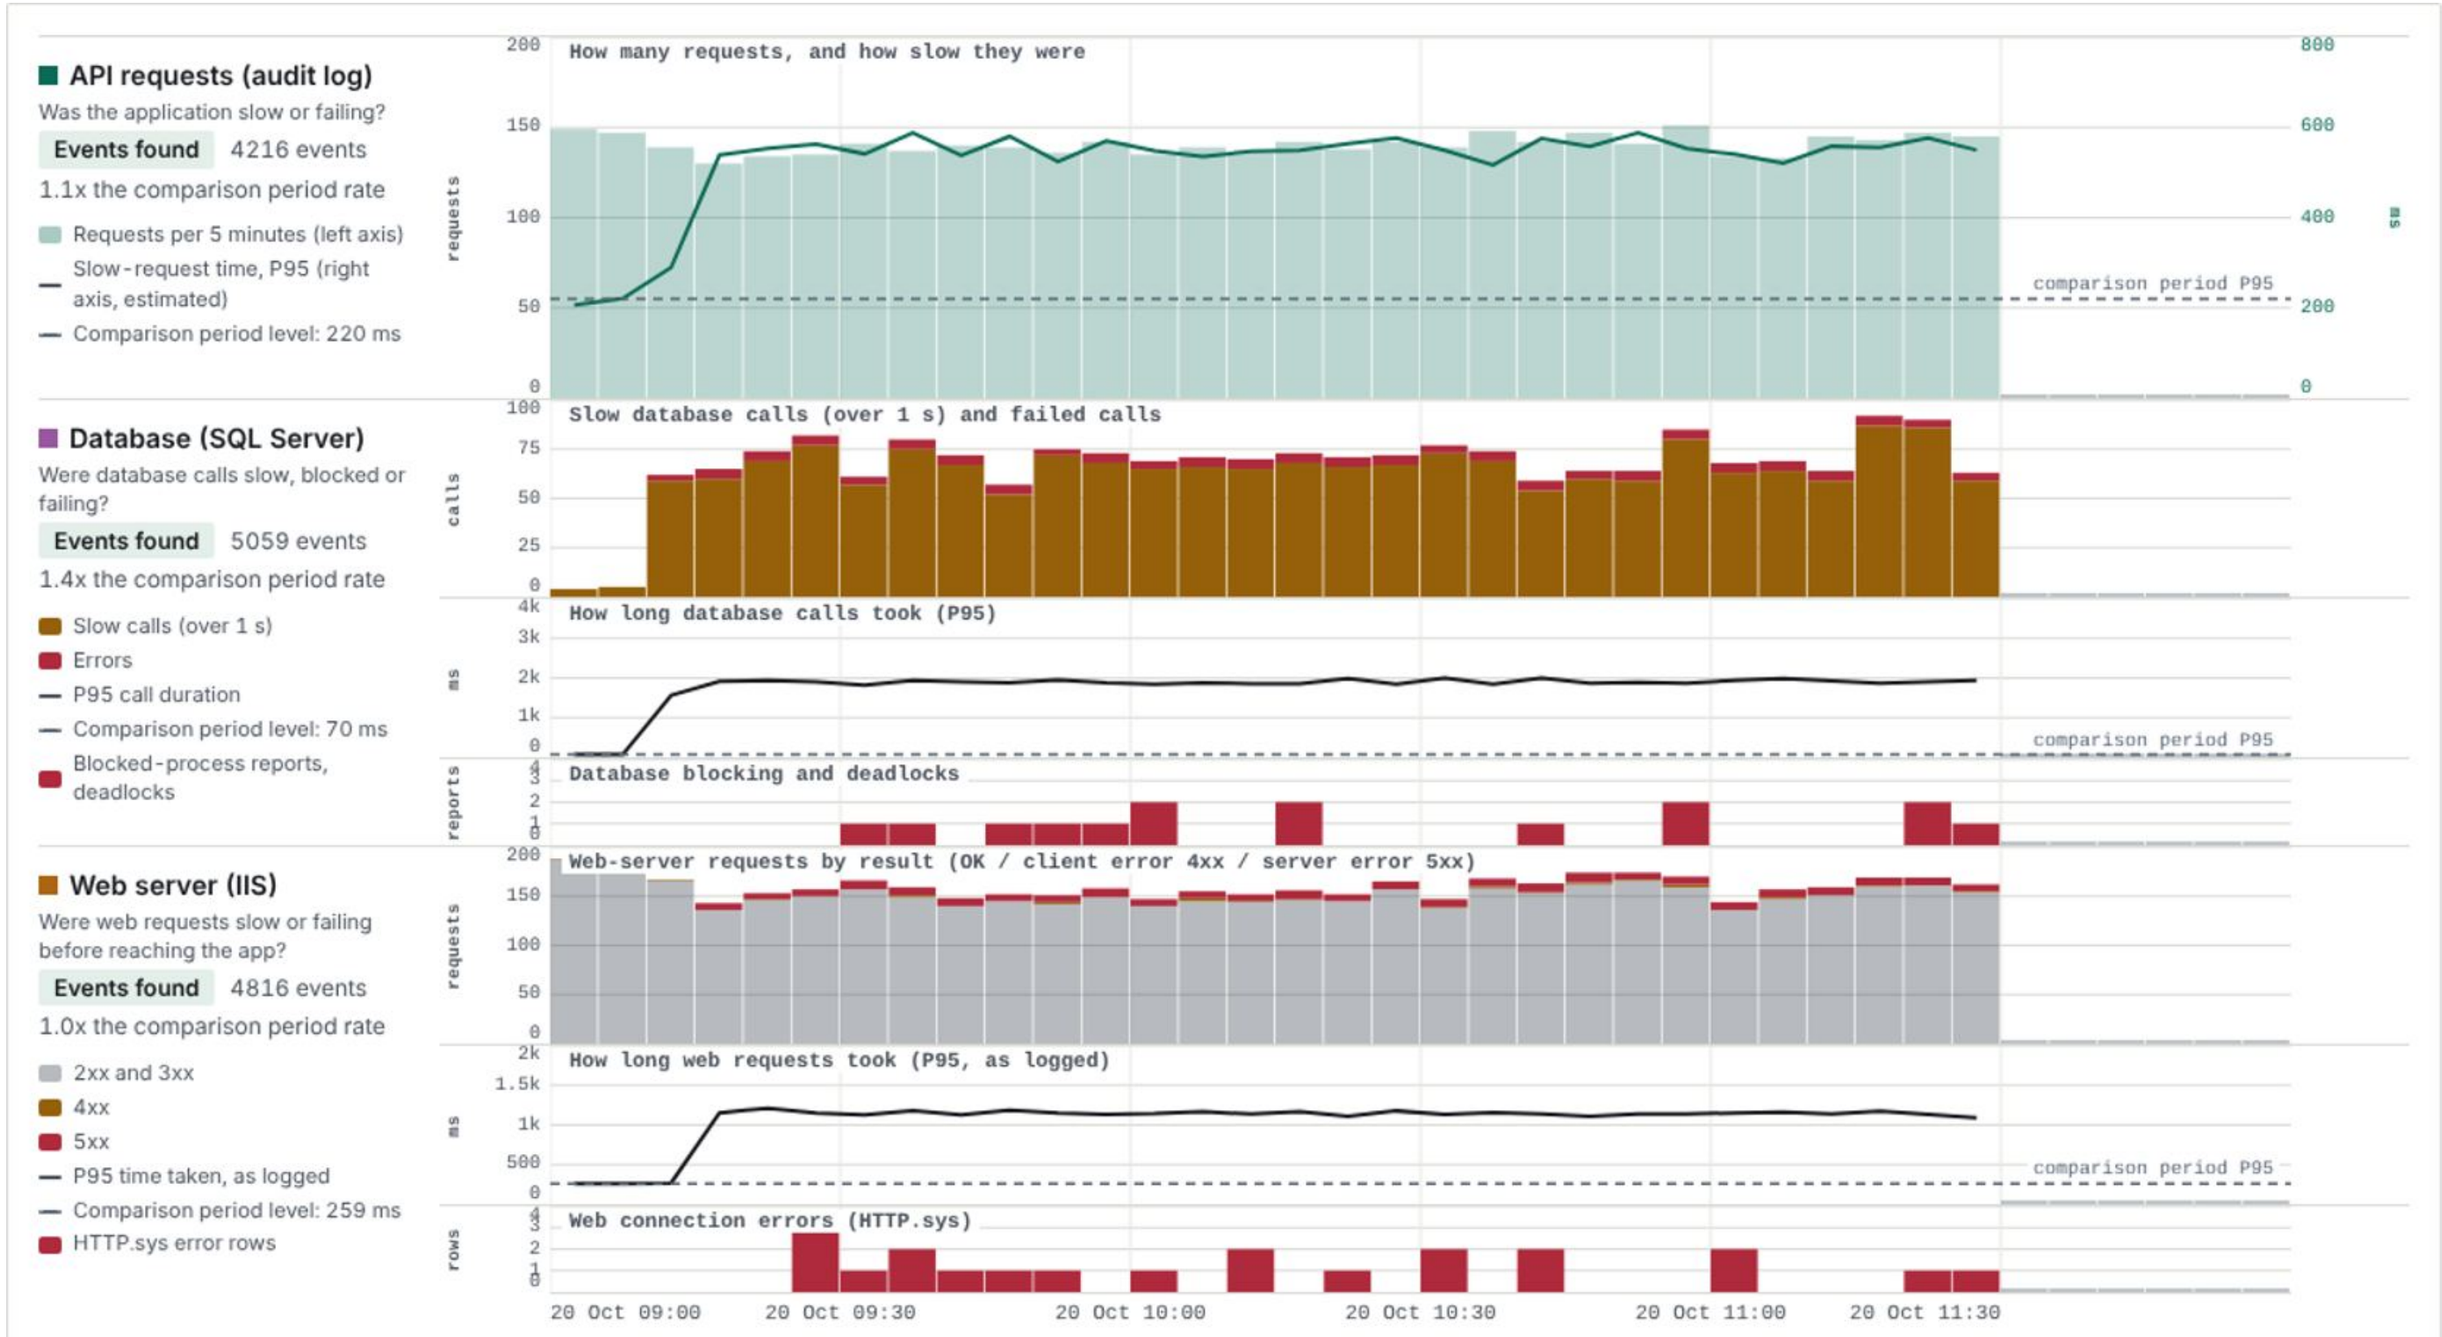

Image 199-timeline-board-three-lanes.png

What it shows: The trace board: three lanes on one shared time axis with titled panels and legends.
How to reach it: Timeline, the big chart card.

Time (UTC). Each bar covers 5 minutes, starting at the time on its left edge; every panel uses the same time axis. Longer periods group more time into each bar so the chart stays readable. Grey dashes are slots outside your window.

Image 200-timeline-hover-bucket.png

What it shows: Hovering a bar shows one line per lane for that moment.
How to reach it: Move the pointer over the chart.

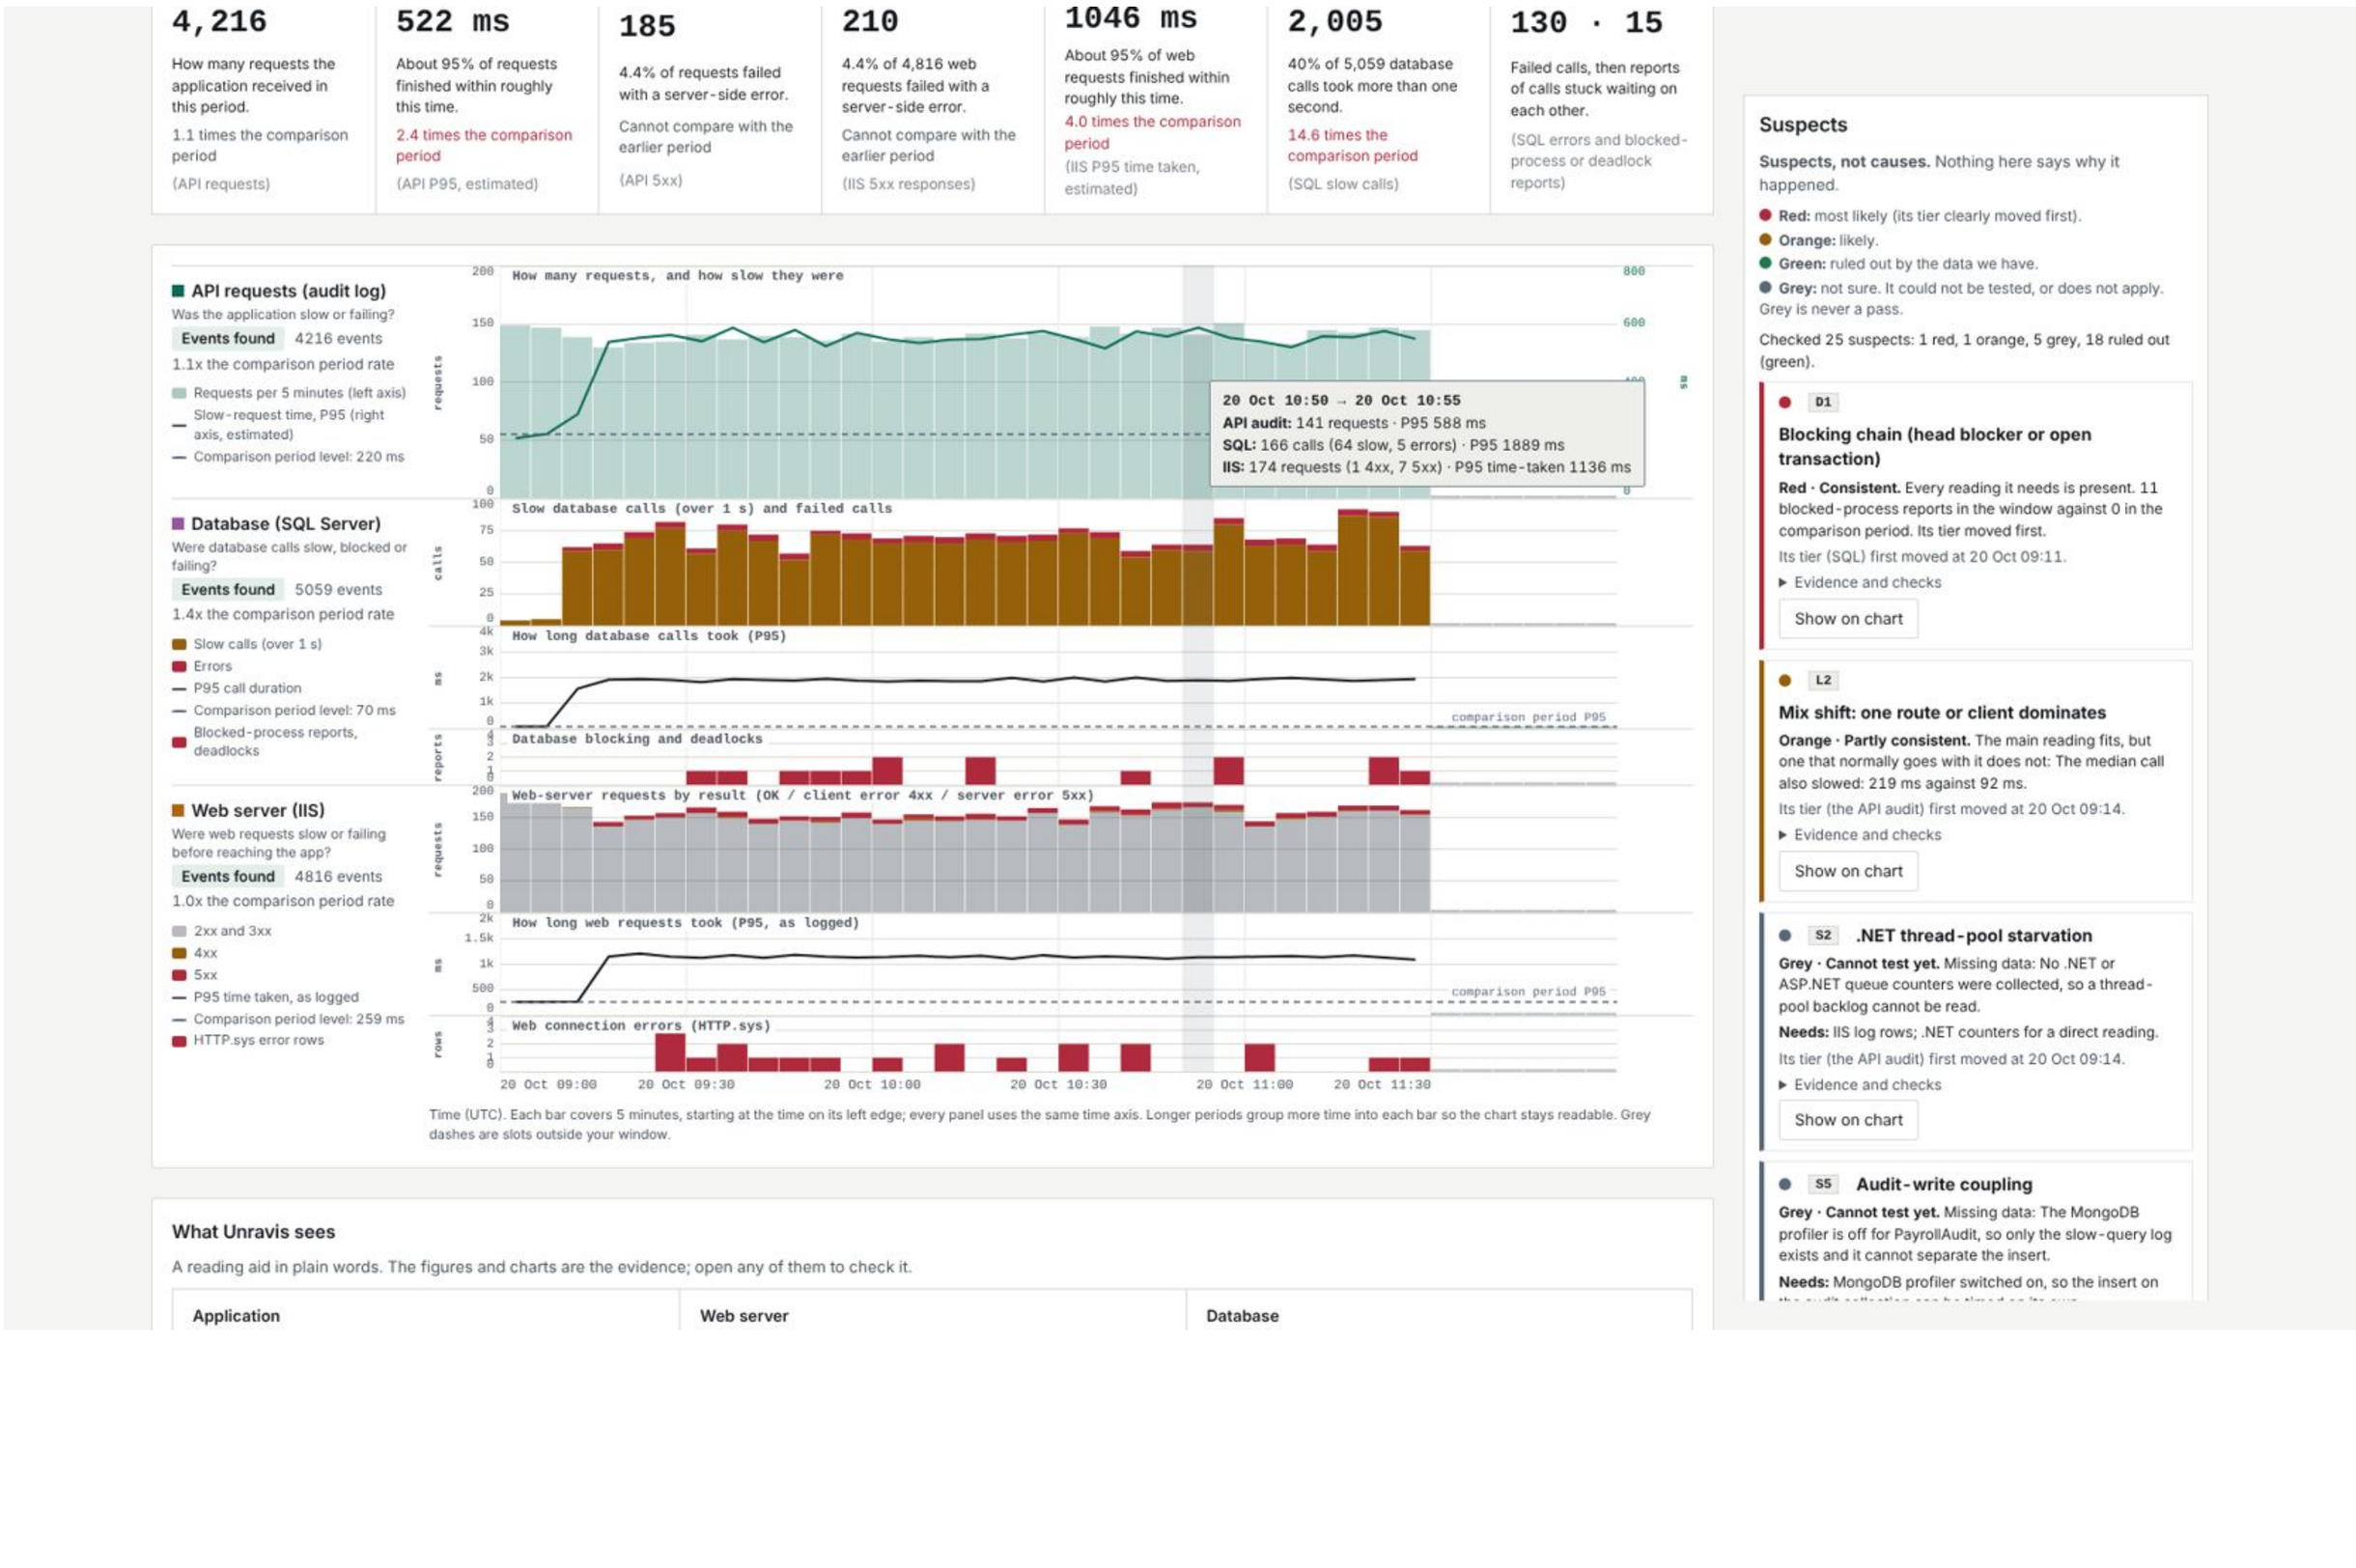

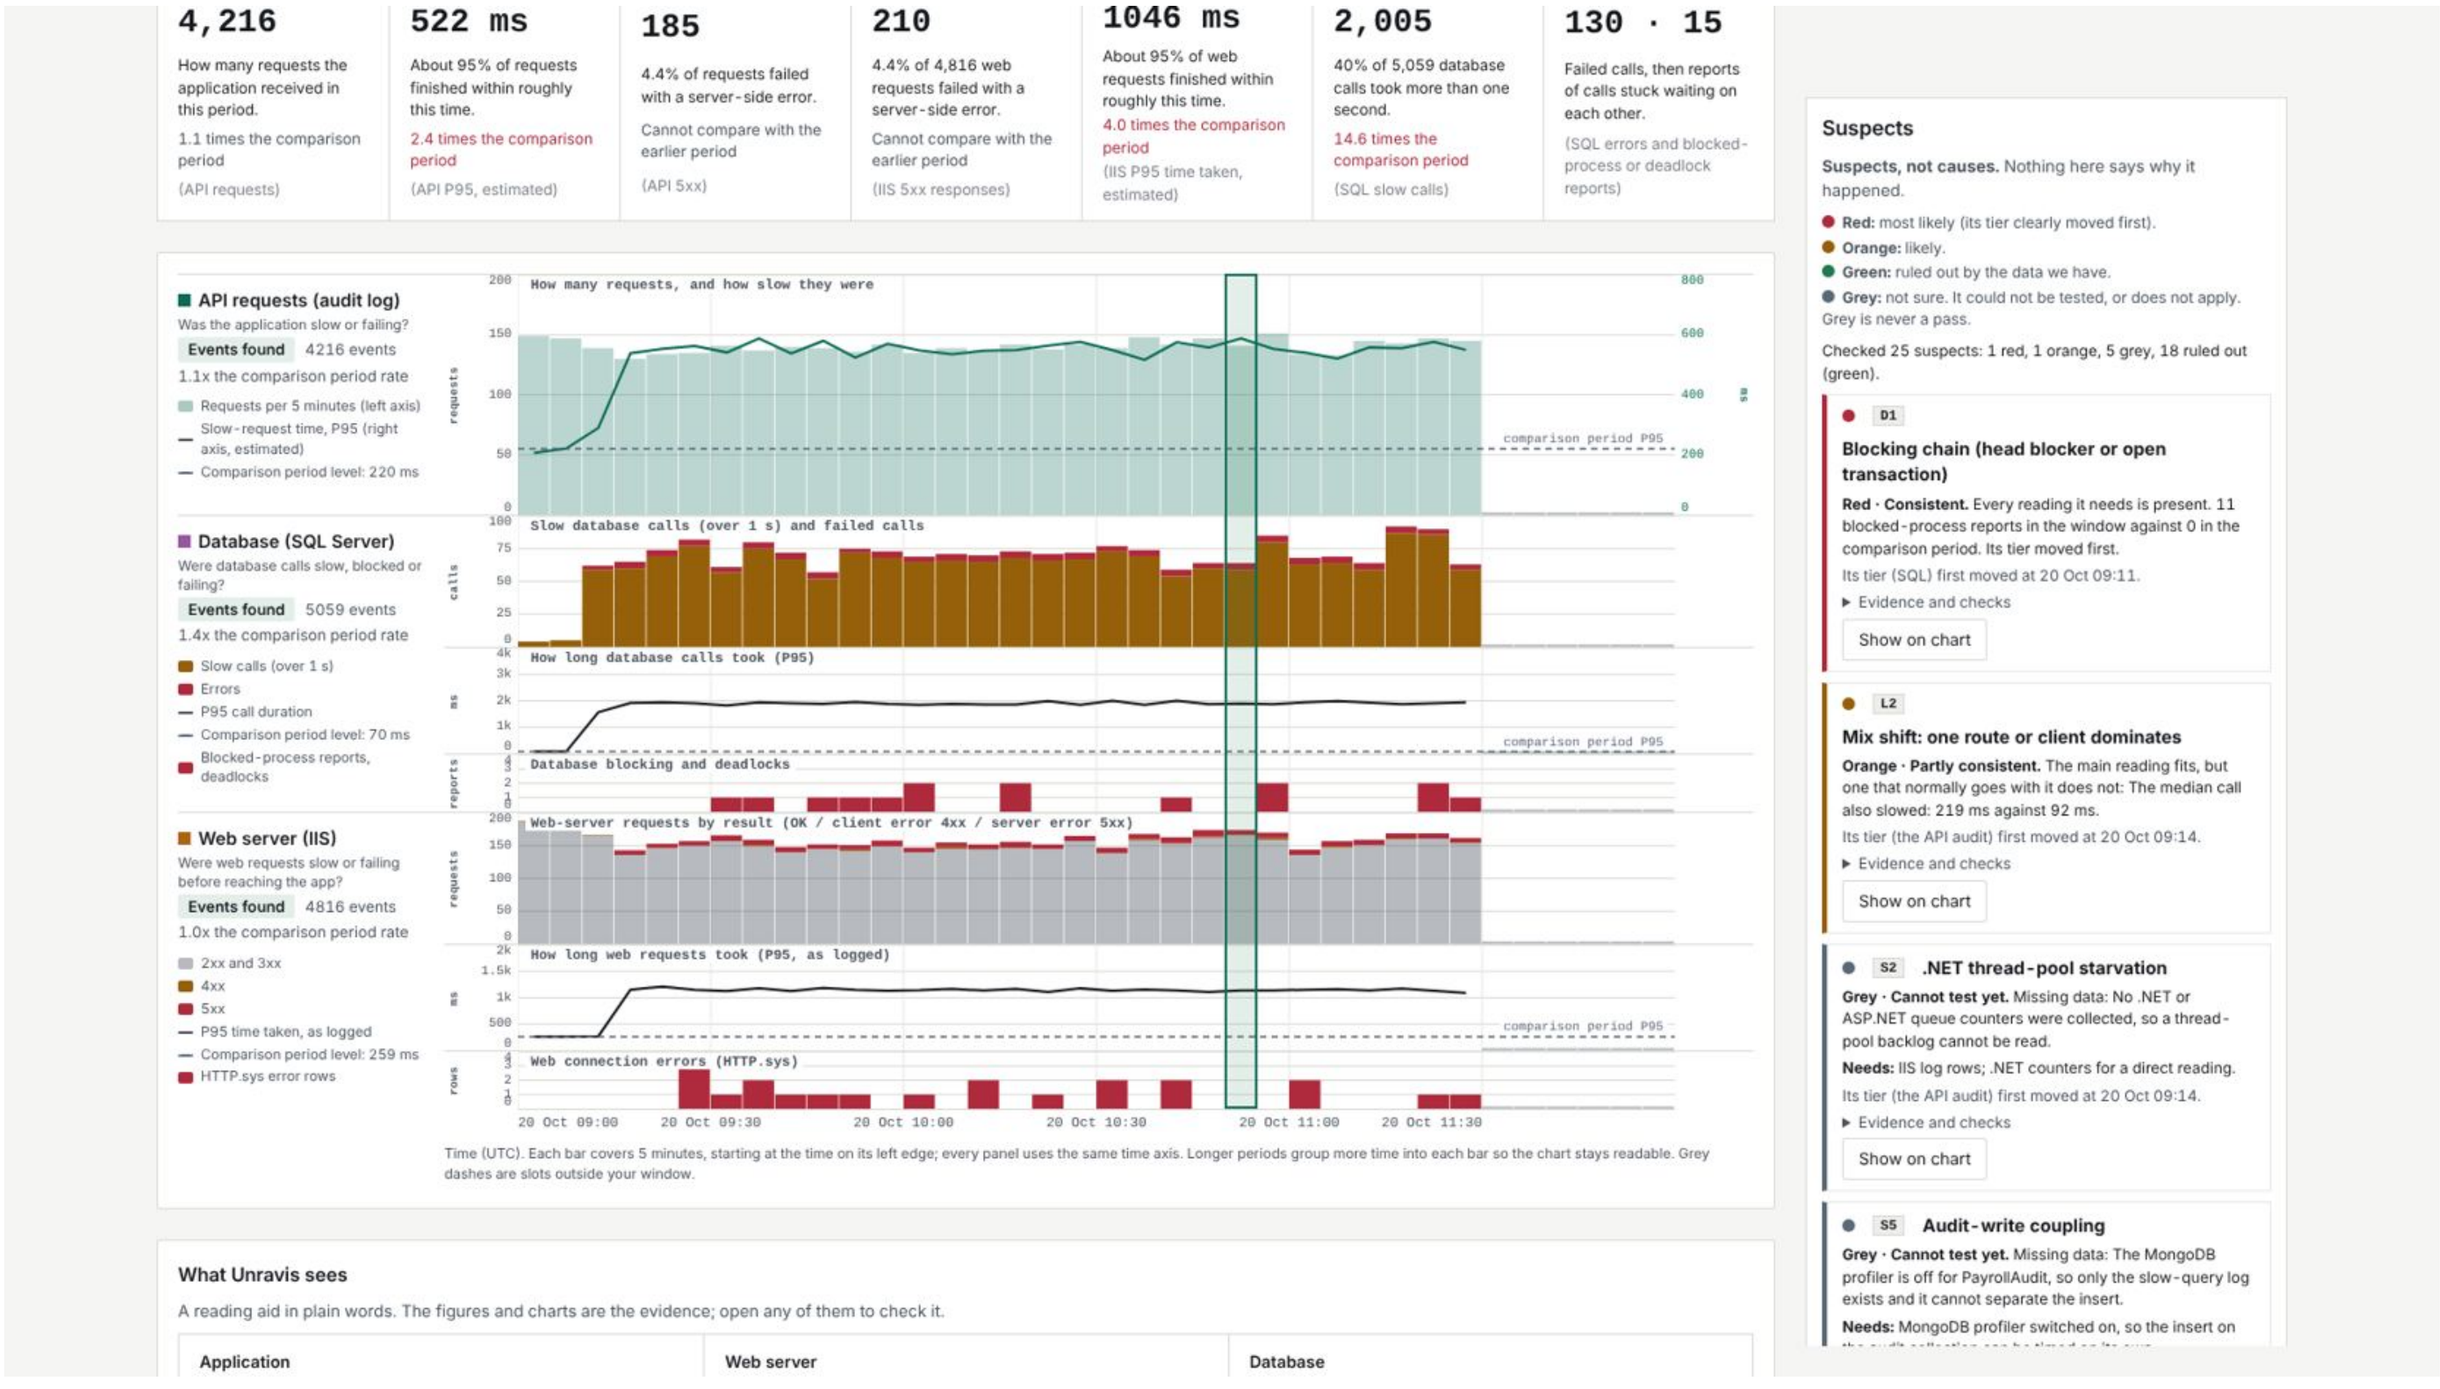

Image 201-timeline-select-bucket.png

What it shows: Clicking a bar selects that bucket across all lanes and fills the bucket panel.
How to reach it: Click a bar.

What Unravis sees

A reading aid in plain words. The figures and charts are the evidence; open any of them to check it.

Application	Web server	Database

Image 202-timeline-bucket-panel.png

What it shows: The bucket panel: the chosen time, what each lane saw, and Open Run analysis for this bucket.
How to reach it: After selecting a bar.

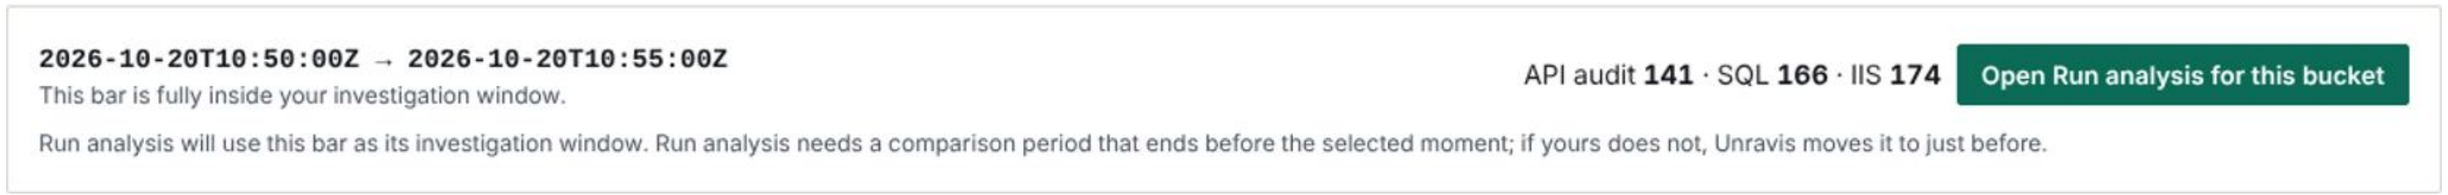

Image 203-timeline-keyboard-arrow.png

What it shows: Left and Right arrow keys move the selection; Home and End jump to the ends.
How to reach it: Press the Right arrow key.

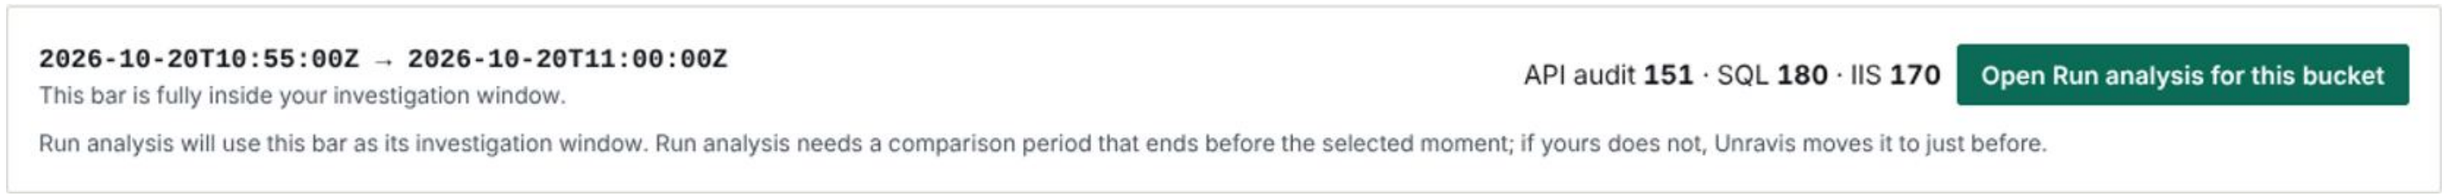

Image 204-timeline-handoff-to-analysis.png

What it shows: Open Run analysis for this bucket: the analysis opens with a strip saying it came from the Investigation Timeline and shows both windows.
How to reach it: Press Open Run analysis for this bucket.

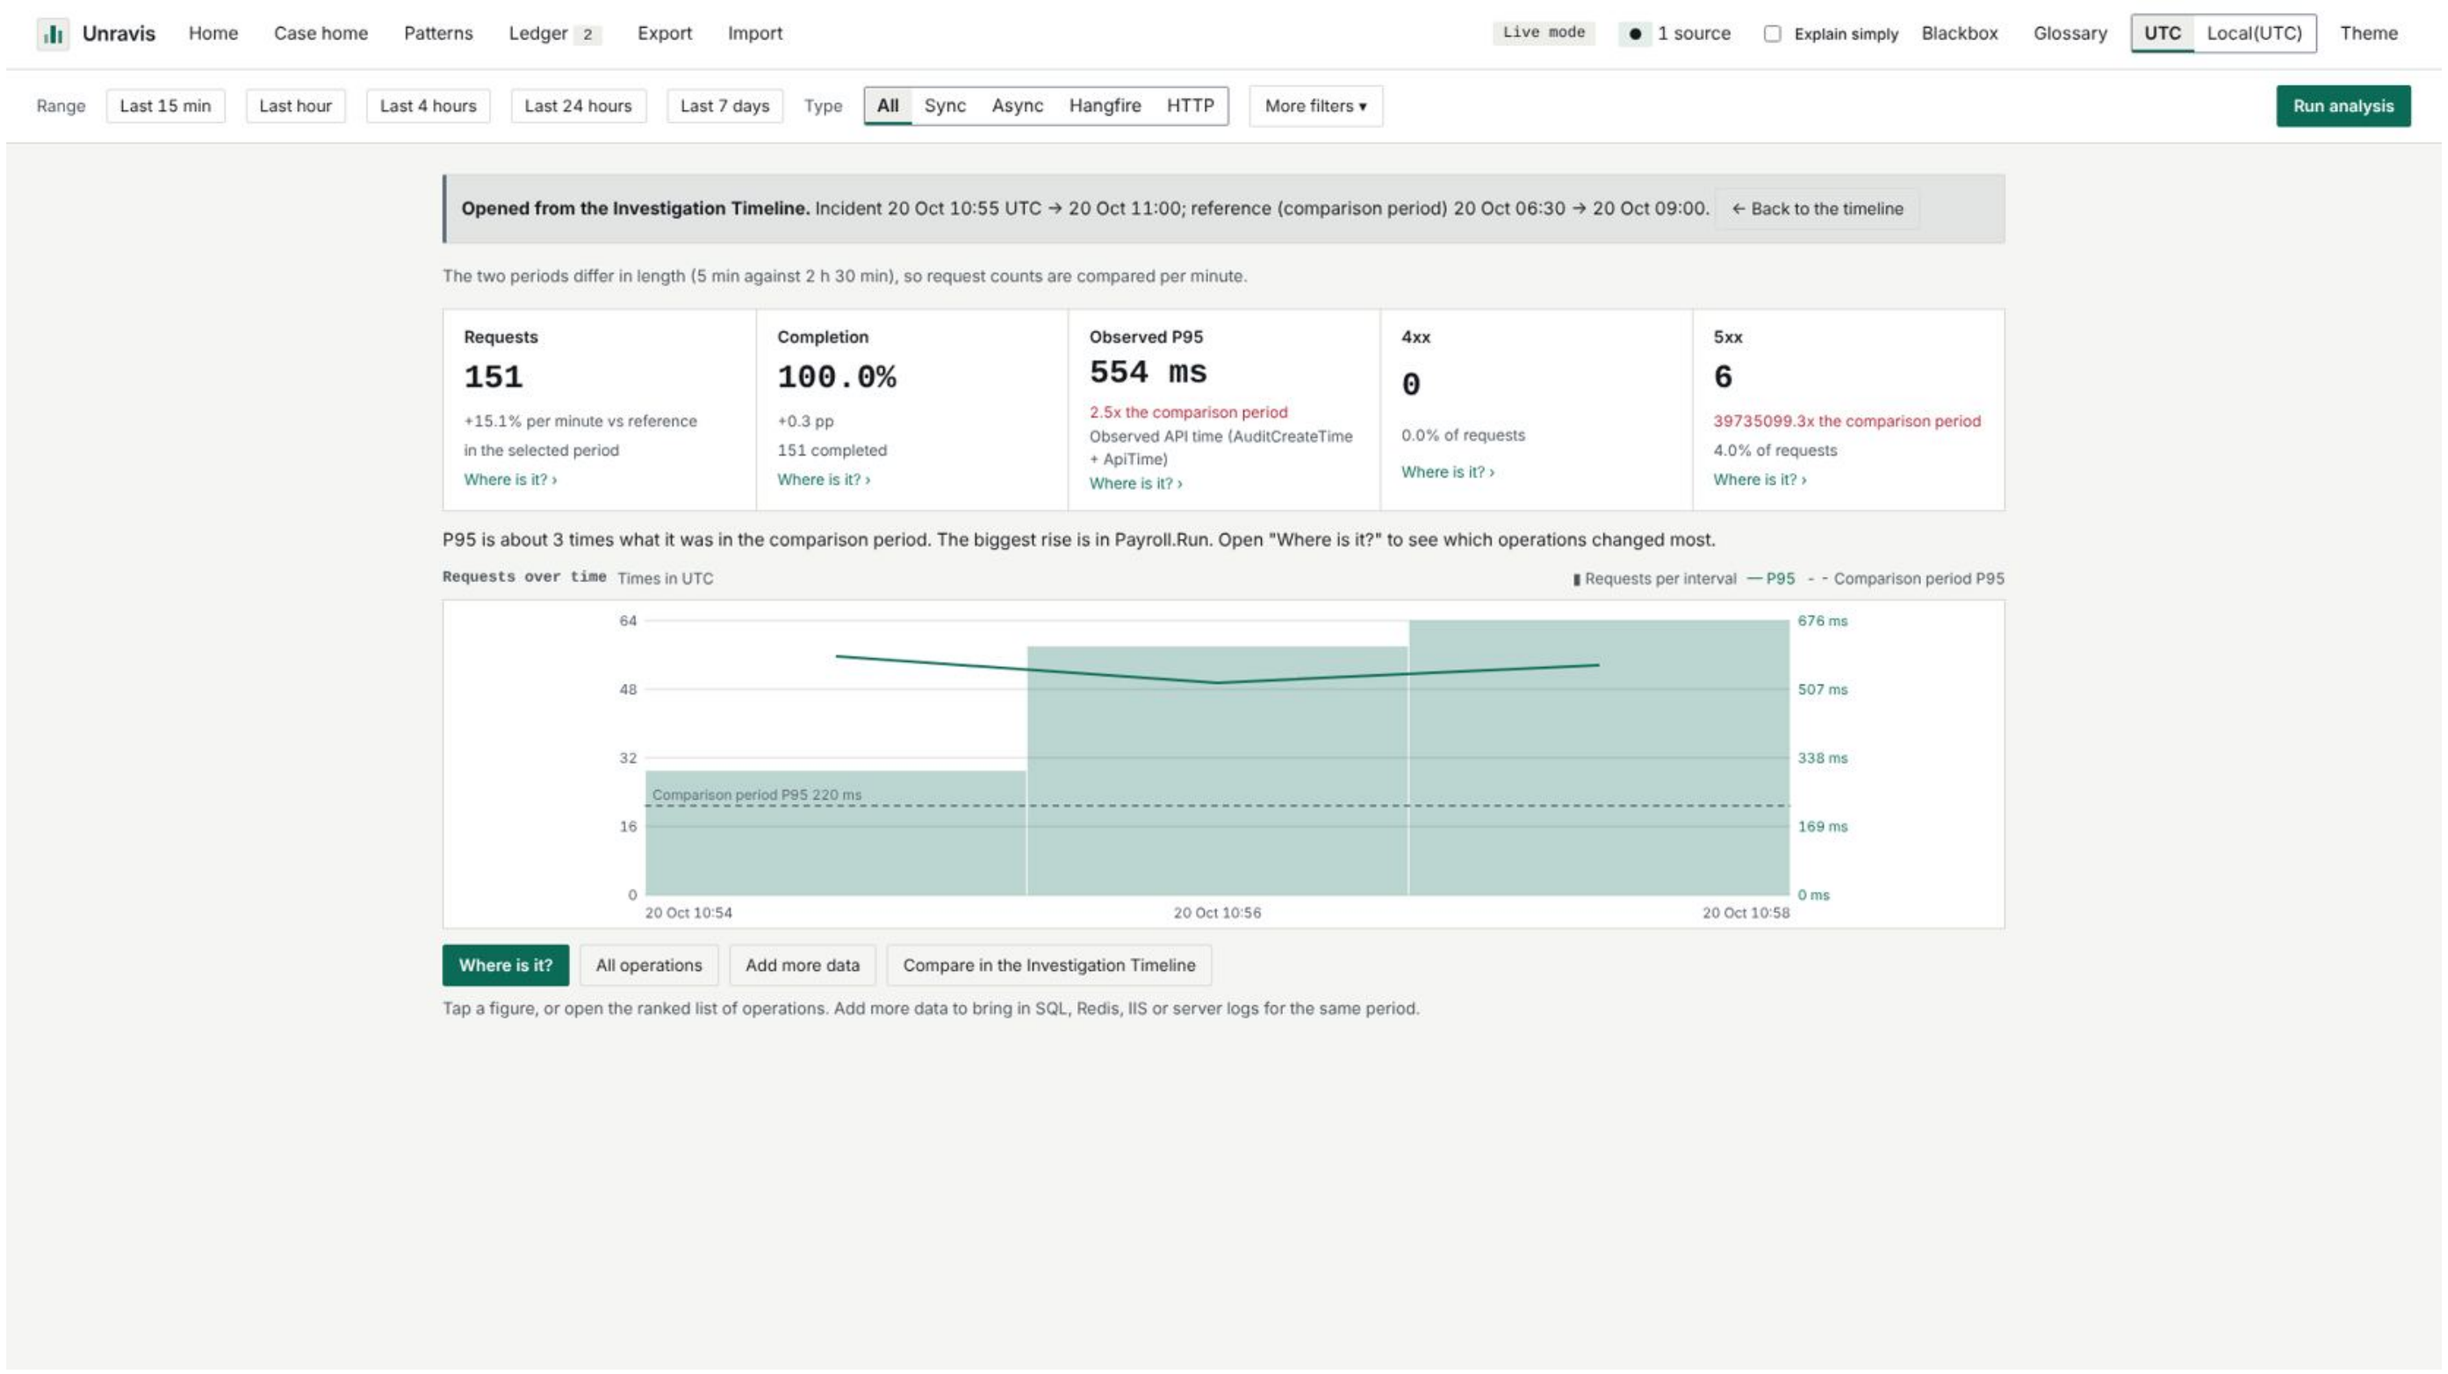

Image 205-timeline-handoff-back.png

What it shows: Back to the timeline keeps both windows and the selection.
How to reach it: Press Back to the timeline.

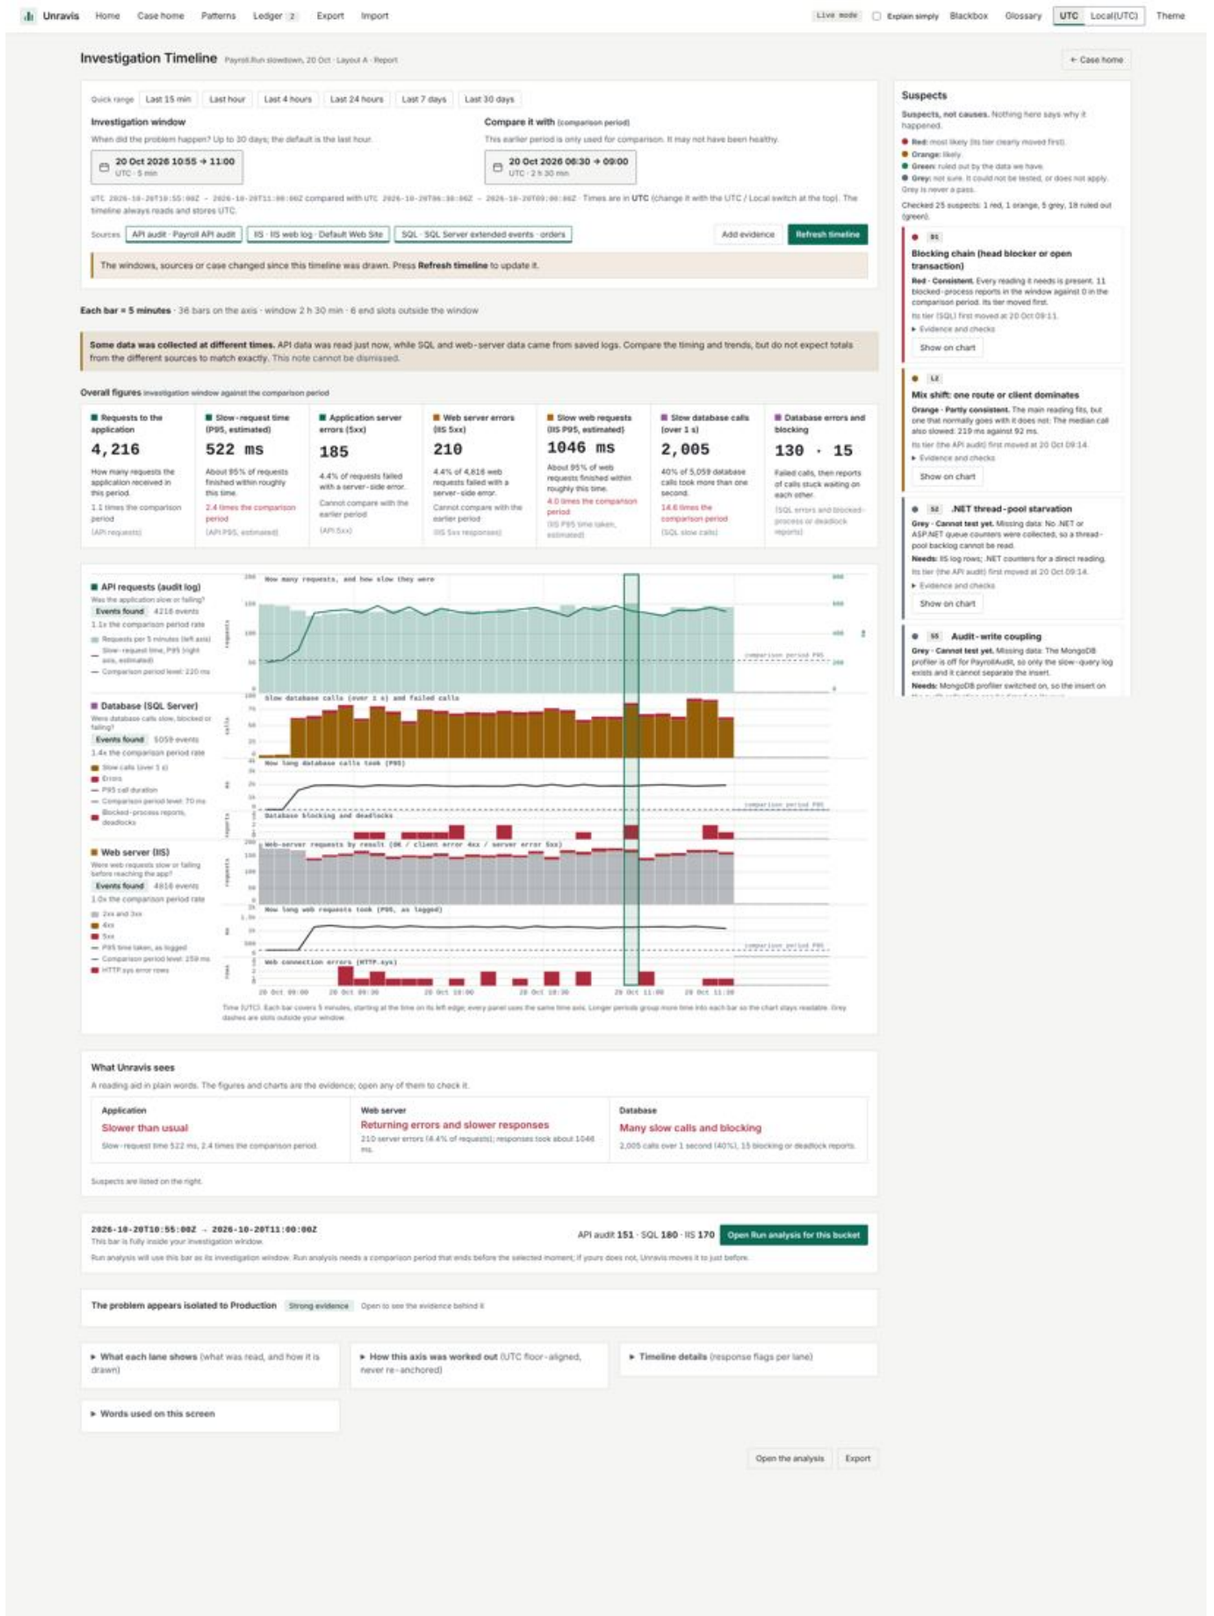

Image 206-timeline-details-sections.png

What it shows: Three folded sections: What each lane shows, How this axis was worked out, Timeline details; plus Words used on this screen.
How to reach it: Scroll to the bottom of the timeline.

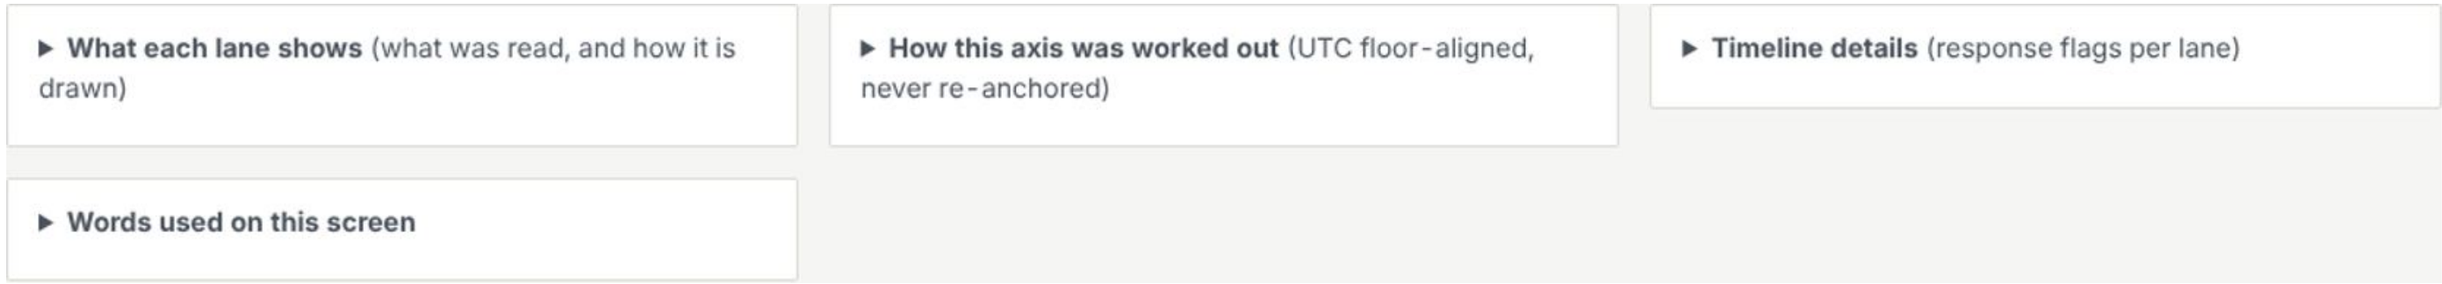

Image 207-timeline-details-axis-open.png

What it shows: How this axis was worked out, opened: start and end you chose, axis start and end, bucket size, raw scans.
How to reach it: Open How this axis was worked out.

▶ **What each lane shows** (what was read, and how it is drawn)

▼ **How this axis was worked out** (UTC floor-aligned, never re-anchored)

In plain terms: the time scale under the charts always starts on a whole hour and stays put, and the bar size is chosen so the chart never has more than 120 bars.

Your window [start, end)	`2026-10-20T09:00:00Z → 2026-10-20T11:30:00Z (2 h 30 min)`
Axis start / end (whole UTC hours)	`2026-10-20T09:00:00Z → 2026-10-20T12:00:00Z`
Bucket size the window length asks for	`300 s`
Smallest size that keeps the axis at 120 buckets or fewer	`300 s`
Bucket size shown = the larger	`300 s → 36 buckets (30 inside your window)`
Boundary raw scans (saved lanes)	**1** · exactly one edge is off the hour: one raw query end fragment: `2026-10-20T11:00:00Z → 2026-10-20T11:30:00Z`

▶ **Timeline details** (response flags per lane)

▶ **Words used on this screen**

Image 208-timeline-layout-a-report.png

What it shows: Layout A (Report): one column, top to bottom.
How to reach it: Prototype controls (bottom bar): layout pill, choose A.
